

ANNALES DE L'INSTITUT HENRI POINCARÉ

PROBABILITÉS ET STATISTIQUES

Speed of convergence in first passage percolation and geodesicity of the average distance	<i>R. Tessera</i>	569–586
Estimating the extremal index through local dependence <i>H. Ferreira and M. Ferreira</i>		587–605
Perturbation by non-local operators	<i>Z.-Q. Chen and J.-M. Wang</i>	606–639
KPZ and Airy limits of Hall–Littlewood random plane partitions	<i>E. Dimitrov</i>	640–693
Davie’s type uniqueness for a class of SDEs with jumps	<i>E. Priola</i>	694–725
Stochastic integral equations for Walsh semimartingales <i>T. Ichiba, I. Karatzas, V. Prokaj and M. Yan</i>		726–756
Stochastic Ising model with flipping sets of spins and fast decreasing temperature	<i>R. Cerqueti and E. De Santis</i>	757–789
Monotonicity and condensation in homogeneous stochastic particle systems	<i>T. Rafferty, P. Chleboun and S. Grosskinsky</i>	790–818
Degrees of freedom for piecewise Lipschitz estimators <i>F. R. Mikkelsen and N. R. Hansen</i>		819–841
Multidimensional two-component Gaussian mixtures detection <i>B. Laurent, C. Marteau and C. Maugis-Rabusseau</i>		842–865
Sharpness of the phase transition and lower bounds for the critical intensity in continuum percolation on \mathbb{R}^d	<i>S. Ziesche</i>	866–878
Distributional limits of positive, ergodic stationary processes and infinite ergodic transformations	<i>J. Aaronson and B. Weiss</i>	879–906
Eta-diagonal distributions and infinite divisibility for R-diagonals <i>H. Bercovici, A. Nica, M. Noyes and K. Szpojankowski</i>		907–937
Non-fixation for biased Activated Random Walks	<i>L. T. Rolla and L. Tournier</i>	938–951
Rigidity of 3-colorings of the discrete torus	<i>O. N. Feldheim and R. Peled</i>	952–994
ASEP(q, j) converges to the KPZ equation	<i>I. Corwin, H. Shen and L.-C. Tsai</i>	995–1012
Stochastic orders and the frog model	<i>T. Johnson and M. Junge</i>	1013–1030
Height fluctuations of stationary TASEP on a ring in relaxation time scale	<i>Z. Liu</i>	1031–1057
Variational multiscale nonparametric regression: Smooth functions	<i>M. Grasmair, H. Li and A. Munk</i>	1058–1097
From optimal stopping boundaries to Rost’s reversed barriers and the Skorokhod embedding	<i>T. De Angelis</i>	1098–1133
Universality in a class of fragmentation-coalescence processes <i>A. E. Kyprianou, S. W. Pagett and T. Rogers</i>		1134–1151
Intertwinings of beta-Dyson Brownian motions of different dimensions	<i>K. Ramanan and M. Shkolnikov</i>	1152–1163
