

BIOMETRICS
Journal of the Biometric Society
CONTENTS

Vol. 27, No. 4

December 1971

The analysis of incomplete data (with discussion).....	H. O. Hartley and R. R. Hocking
Transformations of multivariate data.....	D. F. Andrews, R. Gnanadesikan, and J. L. Warner
The allometry equation in the analysis of the standard oxygen consumption and body weight of the white rat.....	P. Jolicoeur and A. A. Heusner
A general coefficient of similarity and some of its properties.....	J. C. Gower
Distances between populations on the basis of gene frequencies.....	A. W. F. Edwards
Quantitative guidelines for communicable disease control programs.....	J. L. Sanders
Descriptive functions in disease.....	W. R. Best, J. M. Becktel, and A. F. Johnson
The non-comparability of relative risks from different studies.....	P. B. Peacock
Life tests under competing causes of failure and the theory of competing risks.....	M. L. Moeschberger and H. A. David
A double sampling scheme for estimating from binomial data with misclassification: sample size determination.....	A. Tenenbein
On two tests for comparing matched proportions.....	J. Nam
An investigation of Wetherill's method of estimation for the up-and-down experiment.....	S. C. Choi
Combining independent estimators and estimation in linear regression with unequal variances.....	J. N. K. Rao and K. Subrahmaniam
On distance estimators of density in randomly distributed forests.....	J. H. Pollard
Runs of healthy and diseased trees in transects through an infected forest: statistical and computational methods.....	C. Vilhaysai
Time series analysis of water pollution data.....	F. C. Fuller, Jr., and C. P. Tsokos
Testing dose responses on proportions near zero or one with the jackknife.....	D. Salsburg
A two-thirds replicate of a 3^4 factorial.....	Isabelle M. Gravett
Notes	
Multivariate logit analysis.....	J. E. Grizzle
A comparison of some distance measures applicable to multinomial data, using a rotational fit technique.....	W. J. Krzanowski
Moments of the criterion of a test for association.....	V. Siskind
Strengthening tests of symmetry in contingency tables.....	G. van Belle and R. G. Cornell
Tests for interaction in the two-way model with missing data.....	G. A. Milliken and F. A. Graybill
A rapid method for polynomial regression with equally spaced observations.....	M. Huehn
Large sample variances of maximum likelihood estimators of variance components in the 3-way nested classification, random model, with unbalanced data.....	S. R. Searle and J. W. Rudan
Robustness properties of variance component estimators when the underlying model is incorrectly specified.....	S. H. Rosenberg and C. A. Rohde
Further tests of significance for Grubbs' estimators.....	J. L. Jaech

BIOMETRICS
Journal of the Biometric Society
CONTENTS

Vol. 28 No. 1

March 1972

Recent trends of research work in multivariate analysis.....	C. R. Rao
The mathematics of size and shape.....	P. Sprent
Some simultaneous multivariate procedures using Hotelling's T^2 statistics.....	D. R. Jensen
The analysis of a single sample of repeated measurements.....	D. F. Morrison
A multivariate approach to the analysis of drug effects on the electroencephalogram.....	D. J. Jenden, M. D. Fairchild, M. R. Mickey, R. W. Silverman, Coralee Yale
Robust estimates, residuals, and outlier detection with multiresponse data.....	R. Gnanadesikan and J. R. Kettenring
Covariance selection.....	A. P. Dempster
Plots of high-dimensional data.....	D. F. Andrews
Log linear models and tests of independence for contingency tables.....	J. E. Grizzle and O. D. Williams
The analysis of incomplete multiway contingency tables.....	S. E. Fienberg
Probability models, estimation, and classification for multivariate dichotomous populations.....	D. C. Martin and R. A. Bradley
Selection problems under multivariate normal distribution.....	Y. Y. Wang
An illustration of the principal ideas of MANOVA.....	U. Rempe and E. E. Weber

Biometrics is published quarterly. Its objects are to describe and exemplify the use of mathematical and statistical methods in biological and related sciences in a form assimilable by experimenters. The annual non-member subscription rate \$15.00. Inquiries, non-member subscriptions, and orders for back issues, should be addressed to: Biometrics Business Office, Department of Experimental Statistics, North Carolina State University, Raleigh, North Carolina 27607 U.S.A. Editorial correspondence should be directed to: Biometrics Editorial Office, Department of Biostatistics, School of Public Health, University of North Carolina, Chapel Hill, North Carolina 27514 U.S.A.

TECHNOMETRICS

*A Journal of Statistics
for the Physical, Chemical and Engineering Sciences*

CONTENTS

TECHNOMETRICS, Vol. 14, No. 1, FEBRUARY 1972

Enduring Values	W. J. Youden
Randomization and Experimentation	W. J. Youden
An Application of Numerical Integration Techniques to Statistical Tolerancing, III—General Distributions	David H. Evans
Estimation in the Truncated Bivariate Poisson Distribution	M. A. Hamdan
On the Analysis of Response Curve Data	R. D. Snee
Simultaneous Estimation of the Parameters of the Extreme Value Distribution by Sample Quantiles	K. M. Hassanein
On An Iterative Procedure for Estimating Functions When Both Variables are Subject to Error	J. P. Chandler
An Approximate Pitman-Type 'Close' Estimator for the Negative Binomial Parameter p	James M. Maynard and Bryant Chow
A Combination of F -Statistics	Elinor S. Pape
Residuals and Their Variance Patterns	Norman R. Draper and D. Behnken
Group Testing in the Presence of Test Error; An Extension of the Dorfman Procedure	Robert Roeloffs and Lois E. Griff
A Sequential Probability Ratio Test for Availability	Ray E. Schafer
Efficient Estimation of the Mean of an Exponential Distribution When an Outlier is Present	P. C. Joshi
An Evaluation of Approximate Confidence Interval Estimation Methods for Lognormal Means	Charles E. Land
Robust Estimation of Straight Line Regression Coefficients by Minimizing p th Power Deviations	Alan B. Forsythe
On Group Sequential Sampling	Sylvain Ehrenfeld
A Short Life Test for Comparing a Sample with Previous Accelerated Test Results	Wayne Nelson
A Double Sampling Scheme for Estimating from Misclassified Multinomial Data with Applications to Sampling Inspection	Aaron Tenenbein
Simultaneous Prediction Intervals for a Regression Model	Gerald J. Hahn
NOTES	
Rounding Errors in the Independent Variables in a General Linear Model	Benee F. Swindel and David R. Bower
A Note on Selection of the Greatest Exceedance Probability	Russell F. Kappenman
A Note on Some Simple Time Series Estimates	S. H. Huzham and C. A. McGilchrist

CORRIGENDUM	

The purpose of TECHNOMETRICS is to contribute to the development and use of statistical methods in the physical, chemical and engineering sciences. This objective places a high premium on succinct communication among the physical scientist, engineer, statistician and mathematician. The journal will accept for publication papers describing new statistical techniques expected to be useful in these sciences, papers illustrating the application of known statistical methods to new or novel environments, expository or tutorial papers on particular statistical methods, and papers dealing with the philosophy and problems of applying statistical methods to research, development, design and performance. Brief descriptions of problems requiring solution and short technical notes will also be accepted for publication.

For further information please contact TECHNOMETRICS Post Office Box 587 Benjamin Franklin Station Washington, D. C. 20004.

JOURNAL OF THE ROYAL STATISTICAL SOCIETY

THE JOURNAL OF THE ROYAL STATISTICAL SOCIETY is published in three series, SERIES A (GENERAL), four issues a year, annual subscription, post free, £6. U. S. \$15: price each part £2: SERIES B (METHODOLOGICAL), three issues a year, annual subscription post free, £4.75 U. S. \$12: price each part £2: SERIES C (APPLIED STATISTICS), three issues a year, annual subscription £2; U. S. \$5, price each part £1.

Reviews; Current Notes; Library Accessions

Contents of SERIES B (METHODOLOGICAL), Vol. 33, No. 3, 1971

Formal expressions which can be applied to cusum charts (with Discussion) K. KEMP
Bayes, fiducial and frequency aspects of statistical inference in regression analysis in survey sampling (with Discussion) V. P. GODAMBE AND M. E. THOMPSON
The efficient use of supplementary information in standard sampling procedure E. K. FOREMAN AND K. R. W. BREWER
The covariance structure of the departure process from $M/G/1$ queues with finite waiting lines R. A. KING
Weakly stationary point processes and random measures D. J. DALEY
Some specific results in sequential design R. BOHRER
Point spectra of some mutually exciting point processes A. G. HAWKES
Sampling moments of moments associated with univariate distributions L. R. SHENTON, K. O. BOWMAN AND D. SHEEHAN

The Royal Statistical Society 21, Bentinck Street, London, W. 1

JOURNAL OF THE AMERICAN STATISTICAL ASSOCIATION

Volume 66

December 1971

Number 336

Applications

- Probabilistic Prediction: Some Experimental Results Robert L. Winkler
On the Estimation of Lifetime Income Martin M. G. Fase
On the Correlation Between Metropolitan Area In- and Out-Migration by Occupation Leroy O. Stone
The Optimal Measure of Concentration Duncan Bailey and Stanley E. Boyle
Tailored Testing, An Application of Stochastic Approximation Frederic M. Lord
Prediction and Control of the Size of an Input-Output System John J. Wiorowski and William R. McLeod
Processing Survey Data with Ordered Alternative Hypotheses Charles H. Proctor
Experiments in Obtaining Consumer Expenditures by Diary Methods Seymour Sudman and Robert Ferber
Inference in Two-Phase Regression David V. Hinkley
Regression Updating John M. Chambers
Interval Estimation for X -Predictions from Linear Y -on- X Regression Lines Through the Origin C. Philip Cox

A Simple Method for the Construction of Empirical Confidence Limits for Economic Forecasts
W. H. Williams and M. L. Goodman

An Investigation of the Restraints with Respect to Sample Size Commonly Imposed on the Use of the Chi-Square Statistic John T. Roscoe and Jackson A. Byars

The Power of the Shapiro-Wilk W Test for Normality in Samples From Contaminated Normal Distributions
Edwin H. Chen

On Naya and Morgan's Criterion of Accuracy in Trade Recording Paul Luey
Rejoinder Seiji Naya, Theodore Morgan and Joseph A. Colosi

Invited Paper

Fundamental Queries in Aggregation Theory Yuji Ijiri
Theory and Methods

Elicitation of Personal Probabilities and Expectations Leonard J. Savage
Asymptotic Optimality of Fisher's Method of Combining Independent Tests
Ramon C. Littell and J. Leroy Folks

Limiting the Risk of Bayes and Empirical Bayes Estimators—Part I: The Bayes Case
Bradley Efron and Carl Morris

Effect of Dependence on the Level of Some One-Sample Tests Joseph L. Gastwirth and Herman Rubin
On the Sign Test for Symmetry Joseph L. Gastwirth

Finding a Single Defective in Binomial Group-Testing Satindar Kumar and Milton Sobel

NPS Sampling Designs and the Horvitz-Thompson Estimator T. J. Rao

Approximately Optimum Stratification on the Auxiliary Variable Ravindra Singh
Bayes Estimates for Subclasses in Stratified Sampling Alastair Scott and T. M. F. Smith

Disturbance-Variance Estimation in Simultaneous Equations When Disturbances Are Small
V. K. Srivastava

Confidence Intervals for Independent Exponential Series Systems Gerald J. Lieberman and Sheldon M. Ross

A Problem in Accelerated Life Testing Nozer D. Singpurwalla

Objective Criteria for the Evaluation of Clustering Methods William M. Rand

Discrimination and Confidence Bands on Percentiles R. Kirk Steinhurst and David C. Bowden

A Conservative Confidence Interval for a Likelihood Ratio Ann F. S. Mitchell and Clive D. Payne

A Truncated Test for Choosing the Better of Two Binomial Populations James E. Kiefer and George H. Weiss

A Sequential Test for Gamma Distributions R. M. Phatarfod

Rank Tests for "Lehmann's Alternative" Robert B. Davies

The Linear Randomized Response Model Stanley L. Warner

Best Linear Unbiased Estimates of the Parameters of the Logistic Distribution Based on Selected Order Statistics Lai K. Chan, N. N. Chan and E. R. Mead

Best Linear Recursive Estimation P. L. Odell and T. O. Lewis

Approximation of Tail Probabilities by Means of the B_n -Transformation H. L. Gray and T. O. Lewis

Maximum Likelihood Estimation of the Linear Expenditure System Richard W. Parks

Comparison of Tests of the Equality of Dependent Correlation Coefficients
Olive Jean Dunn and Virginia Clark

Tables for Shortest Confidence Intervals on the Standard Deviation and Variance Ratio from Normal Distributions P. David Wilson and James Tonascia

Power Function of the F -Test Under Non-Normal Situations M. L. Tiku

MEETINGS OF THE INSTITUTE

NOTE: This calendar lists all of the meetings which have been approved by the IMS Council to date. Meeting dates which fall rather far in the future are subject to change.

Meet- ing No.	Place	Date	Abstract Deadline*	Joint With
132	Blacksburg, Virginia (Eastern Regional)	April 17-19, 1972	February 16, 1972	ASA
133	Ames, Iowa (Central Regional)	April 26-28, 1972	February 16, 1972	ASA, ENAR
134	Seattle, Washington (Western Regional)	June 19-21, 1972	April 19, 1972	
135	Montreal, Canada (Special Eastern Regional)	August 13-17, 1972	June 14, 1972	
136	Hanover, New Hampshire (Annual)	August 28-31, 1972	June 14, 1972	AMS
	Ithaca, New York (Eastern Regional)	Spring 1973		ASA, ENAR
	Albuquerque, New Mexico (Western Regional)	Spring 1973		

* Abstracts should be submitted in duplicate to the Executive Secretary on abstract blanks which may be obtained from him. Abstracts of papers to be presented *in person* at the meetings must be received on or before the corresponding deadline. Only one contributed paper may be given in person at any one meeting. Abstracts contributed by title may be submitted at any time and will be printed in the next issue to go to press. Abstracts should not exceed 200 words and should avoid displayed expressions and complicated formulae. They can be accepted from non-members of the IMS only if introduced by members. Abstracts must follow the stylistic requests on the abstract blank or they may be returned.

THE ANNALS OF MATHEMATICAL STATISTICS

INSTRUCTIONS FOR AUTHORS

Submission of Papers. Papers to be submitted for publication should be sent to the Editor of the *Annals of Mathematical Statistics*. (For current address, see the latest issue of the *Annals*.) The original (or xerox copy) should be submitted with two additional copies on paper that will take ink corrections. The manuscript will *not* normally be returned to the author; when expressly requested by the author, one copy of the manuscript will be returned.

Preparation of Manuscripts. Manuscripts should be typewritten, entirely double-spaced, including references, with wide margins at sides, top and bottom. Dittoed or mimeographed papers are acceptable only if completely legible; xerox copies are preferable. When technical reports are submitted, all extraneous sheets and covers should be removed.

Submission of Reference Papers. Copies (preferably two) of unpublished or not easily available papers cited in the manuscript should be submitted with the manuscript.

Title and Abbreviated Title. The title should be descriptive and as concise as is feasible, i.e., it should indicate the topic of the paper as clearly as possible, but every word in it should be pertinent. An abbreviated title to be used as a running head is also required, and should be given below the main title. This should normally not exceed 35 characters. For example, a title might be "A Limit Theorem for Conditioned Recurrent Random Walk Attracted to a Stable Law," with the running head "Limit Theorem for Recurrent Random Walk" or possibly "Recurrent Random Walk Attracted to a Stable Law", depending on the emphasis to be conveyed.

Abstract. Each manuscript is required to contain an abstract, which will be printed immediately after the title, clearly separated from the rest of the paper. Its main purpose is to inform the reader quickly of the nature and results of the paper; it may also be used as an aid in retrieving information. The length of an abstract will clearly depend on the length and difficulty of the paper, but in general it should not exceed 150 words. It should be typed on a separate page, under the heading "Abstract", followed by the title of the paper. Formulas should be used as sparingly as possible. The abstract should not make reference to results or formulas in the body of the paper—it should be self-contained.

Footnotes. Footnotes should be reduced to a minimum and, where possible, should be replaced by remarks in the text or in the references; formulas in footnotes should be avoided. Footnotes in the text should be identified by superscript numbers and typed together, double-spaced, on a separate page.

Key Words. Included as the first footnote on page 1 should be the headings:

American Mathematical Society 1970 subject classification. Primary—; Secondary—.

Key words and phrases:

The classification numbers representing the primary and secondary subjects of the article may be found with instructions for its use, as an Appendix to *Mathematical Reviews* Index to Volume 39, June 1970. (See, also, *The Notices of the American Mathematical Society*, June 1970, pp. 616–618, for more details.) The key words and phrases should describe the subject matter of the article; generally they should be taken from the body of the paper.

List of Symbols. A completely typewritten list of symbols, identified typographically, not mathematically, should be attached to the manuscript on a separate page. Distinguish between "oh" and "zero"; "ell" and "one"; "kappa" and "kay", etc. Indicate also when special type is required (Greek, German, script, boldface, etc.); other letters will be set in italics.

Figures and Tables. Figures, charts, and diagrams should be prepared in a form suitable for photographic reproduction and should be professionally drawn twice the size they are to be printed. (These need not be submitted until the paper has been accepted for publication.) Tables should be typed on separate pages with accompanying footnotes immediately below the table.

Formulas. Fractions in the text are preferably written with the solidus or negative exponent; thus, $(a + b)/(c + d)$ is preferred to $\frac{a + b}{c + d}$, and $(2\pi)^{-1}$ or $1/(2\pi)$ to $\frac{1}{2\pi}$. Also, $a^{b(c)}$ and $a_{b(c)}$ are preferred to a^b and a_b , respectively. Complicated exponentials should be represented with the symbol exp. A fractional exponent is preferable to a radical sign.

References. References should be typed double-spaced and should follow the style:

- [5] Wilks, S. S. (1938). The large-sample distribution of the likelihood ratio for testing composite hypotheses. *Ann. Math. Statist.* 9 60–62.

In textual material, the format "... Wilks (1938) ..." is normally preferred to "... Wilks [5] ...". Multiple references can be distinguished as "... Wilks (1938a) ...". Abbreviations for journals should be taken from *Mathematical Reviews* Index to Volume 40, 1970, pp. 1683–1702.

Proofs. Author will ordinarily receive galley proofs. Corrected galley proofs should be sent to the Managing Editor of the *Annals of Mathematical Statistics*. (For current address, see the latest issue of the *Annals*.)

Contents (Continued)

Families of infinitely divisible distributions closed under mixing and convolution J. KEILSON AND F. W. STEUTEL	242
Local limit theorems and recurrence conditions for sums of independent integer-valued random variables.....	J. MINEKA 251
A class of random convex polytopes.....	A. P. DEMPSTER 260
Rates of convergence for some functionals in probability.....	STANLEY SAWYER 273
Continuity properties of some Gaussian processes.....	CHRISTOPHER PRESTON 285
The occupation time of a set by countably many recurrent random walks..	N. A. WEISS 293
A variational characterization of finite Markov chains.....	FRANK SPITZER 303
A stability of symmetrization of product measures with few distinct factors JAMES HANNAN AND J. S. HUANG	308
A generalization of separable stochastic processes.....	E. O. ELLIOTT 320
Structural distributions without exact transitivity.....	JAMES V. BONDAR 326

Short Communications

Stein-James estimators of a multivariate location parameter....	SERGE L. WIND 340
On the expected values of the elementary symmetric functions of a noncentral Wishart matrix.....	D. J. DE WAAL 344
A note on Robbins' compound decision procedure.....	J. S. HUANG 348
Asymptotic normality of sums of minima of random variables.....	THOMAS HÖGLUND 351
Limiting properties of the mean residual lifetime function.....	ISAAC MEILIJSON 354
A law of the iterated logarithm for the asymmetric stable law with characteristic exponent one.....	J. L. MIJNHEER 358
A note on the complete convergence of stable distribution functions STEPHEN JAMES WOLFE	363
A note on comparisons of Markov processes.....	GEORGE O'BRIEN 365
A remark on nonatomic measures..	M. BHASKARA RAO AND K. P. S. BHASKARA RAO 369
A note on construction of triangular PBIB design with parameters $v = 21$, $b = 35$, $r = 10$, $k = 6$, $\lambda_1 = 2$ and $\lambda_2 = 3$	K. R. AGGARWAL 371
