

JOURNAL OF THE AMERICAN STATISTICAL ASSOCIATION

Volume 66

September 1971

Number 335

Applications

A Markovian Model of Income Dynamics John J. McCall
The Average Workweek of Capital in Manufacturing Paul Taubman and Peter Gottschalk
The Statistical Structure of Bidding for Oil and Mineral Rights Chester R. Pelto
Retaining Units After Changing Strata and Probabilities Leslie Kish and Alastair Scott
Specification Error Tests and Alternative Functional Forms of the Aggregate Production Function
James B. Ramsey and Paul Zarembka

Correlated Measurement Errors and the Least-Squares Estimator of the Regression Coefficient John J. Chai
Problems of Convergence of Maximum Likelihood Iterative Procedures in Multiparameter Situations
Nathan Mantel and Max Myers

The USDA Series on Net Investment in Farm Real Estate—A Critique Kul B. Bhatia
A Method for Examining Rounding Error in Least-Squares Regression Computer Programs
Gary M. Mullet and Tracy W. Murray

A Monte Carlo Investigation of the Robustness of T^2 G. R. Chase and William G. Bulgren
An Extension of the Table of the Student Distribution F. B. Lempers and A. S. Louter
Costs and Returns to Scale in U. S. Post Offices Leonard Merewitz

Theory and Methods

On Bias Reduction in Estimation W. R. Schucany, H. L. Gray and D. B. Owen
An Analysis of Variance for Categorical Data Richard J. Light and Barry H. Margolin
Play-the-Winner Rule and Inverse Sampling in Selecting the Better of Two Binomial Populations
Milton Sobel and George H. Weiss

Does an Observed Sequence of Numbers Follow a Simple Rule? (Another Look at Bode's Law)
Bradley Efron

Comments by I. J. Good, I. D. J. Bross, Alan Stuart, J. M. A. Danby, Colin Blyth, John Pratt
Rejoinder Bradley Efron
Certain Uncorrelated and Independent Rank Statistics Ronald H. Randles and Robert V. Hogg
Sequential Test for Correlation Coefficients Sung C. Cho
An Interpolatory Method of Approximating Distribution Functions with Applications to the Gamma and
Related Variates Rudy A. Gideon and John Gurland
Multiphase Sampling in Nonresponse Problems K. P. Srinath
A Note on Estimation in Straight Line Regression When Both Variables Are Subject to Error
Max Halperin and Joan Gurian

Mean Square Errors of the Best Unbiased and Maximum Likelihood Estimators of Tail Probabilities in
Normal Distributions Shelley Zacks and Roy C. Milton

Efficiency-Robust Systematic Linear Estimators of Location Valerie Miké
Expectations and Variances of Maximum Likelihood Estimates of the Multivariate Normal Distribution
Parameters with Missing Data Donald F. Morrison

The Probabilities of the Type I Errors of the Welch Tests for the Behrens-Fisher Problem Ying Y. Wang
Hypothesis Testing and Confidence Intervals for Products and Quotients of Poisson Parameters with Appli-
cations to Reliability Bernard Harris

The Partial Sequential Probability Ratio Test Campbell B. Read
Sequential Estimation in the Uniform Density Peter J. Cooke

On the Selection of Multi-Factor Experimental Arrangements with Resource Constraints
John B. Neuhardt and Hugh E. Bradley

Cluster Analysis and Mathematical Programming M. R. Rao

Optimization of the Unrelated Question Randomized Response Model J. J. A. Moors

The Asymptotic Distribution of Conditional Likelihood Ratio Tests Erling B. Andersen

Estimation Procedures for Difference of Means with Missing Data Pi-Erh Lin

Optimum Sample Size and Sampling Interval for Controlling the Mean of Non-normal Variables
Y. Nagendra and G. Rai

A Characterization of the Dirichlet Distribution J. N. Darroch and D. Ratcliff

On The Bounds of the Range of Order Statistics Douglas M. Hawkins

Invited Paper

Problems of Data Organization and Analytical Methods in Geography Brian J. L. Berry

TRABAJOS DE ESTADISTICA y de INVESTIGACION OPERATIVA

Review published by the "Instituto de Investigación Operativa y Estadística"
Serrano, 123.-Madrid-6. Spain.

VOL. XXII

CONTENTS

CUAD. I y II

SIXTO RÍOS.—Decisiones en incertidumbre-

ANTONIO FERNANDEZ DE TROCONIZ.—Aplicación de la teoría de Grafos a la clasificación de los estados y clases de las cadenas finitas de Markov.

M. SAN MIGUEL.—Desarrollo en serie de Fourier de las funciones aleatorias periódicas.

EDWARD J. DUDEWICZ.—Maximum likelihood estimators for non-1-1 functions.

L. K. CHAN AND K. D. LING.—Asymptotic confidence regions and likelihood ratio test of hypothesis for location and scale parameters based on type II censored samples.

A. K. GOVIL.—Stochastic behaviour of a complex system with bulk failures and priority repairs.

S. G. PRABHU-AJGAONKAR.—Commutativity of the operations of optimum estimator and optimum sampling procedure for Horvitz and Thompson's T_1 class of linear unbiased estimators.

L. K. ROY.—An extension of the Pearson system of frequency curves.

JOHN E. WALSH.—Extended validity of results for variance components models.

J. K. WANI AND D. G. KABE.—Generalized inverse and its applications in classical normal multivariate regression theory.

NOTAS:

SIXTO RÍOS.—La enseñanza de la Investigación Operativa en los países de la NATO.

A. M. LEE.—Investigación Operativa Supranacional.

P. A. P. MORAN.—La I.A.S.P.S. y sus "Satellite Symposia."

A. E. CROFTS, JR.—Some covariance relations for linear and quadratic forms.

R. K. GUPTA.—Basic feasible solutions and decomposition principle for linear fractional functionals programming problem.

MILTON SOBEL AND GEORGE H. WEISS.—A comparison of play-the-winner and vector-at-a-time sampling for selecting the better of two binomial populations with restricted parameter values.

GULAB RAI.—A mathematical model for accident proneness.

GULAB RAI.—A continuous acceptance sampling procedure based on cumulative sum chart for mean.

TRABAJOS DE ESTADISTICA Y DE INVESTIGACION OPERATIVA is published three issues a year.
Annual subscription price is U.S. \$6; each part U.S. \$2.50.

All correspondence should be addressed to Prof. Sixto Ríos, Serrano 123, Madrid-6. Spain.

THE ANNALS OF MATHEMATICAL STATISTICS

INSTRUCTIONS FOR AUTHORS

Submission of Papers. Papers to be submitted for publication should be sent to the Editor of the *Annals of Mathematical Statistics*. (For current address, see the latest issue of the *Annals*.) The original (or xerox copy) should be submitted with two additional copies on paper that will take ink corrections. The manuscript will *not* normally be returned to the author; when expressly requested by the author, one copy of the manuscript will be returned.

Preparation of Manuscripts. Manuscripts should be typewritten, entirely double-spaced, including references, with wide margins at sides, top and bottom. Dittoed or mimeographed papers are acceptable only if completely legible; xerox copies are preferable. When technical reports are submitted, all extraneous sheets and covers should be removed.

Submission of Reference Papers. Copies (preferably two) of unpublished or not easily available papers cited in the manuscript should be submitted with the manuscript.

Title and Abbreviated Title. The title should be descriptive and as concise as is feasible, i.e., it should indicate the topic of the paper as clearly as possible, but every word in it should be pertinent. An abbreviated title to be used as a running head is also required, and should be given below the main title. This should normally not exceed 35 characters. For example, a title might be "A Limit Theorem for Conditioned Recurrent Random Walk Attracted to a Stable Law," with the running head "Limit Theorem for Recurrent Random Walk" or possibly "Recurrent Random Walk Attracted to a Stable Law", depending on the emphasis to be conveyed.

Abstract. Each manuscript is required to contain an abstract, which will be printed immediately after the title, clearly separated from the rest of the paper. Its main purpose is to inform the reader quickly of the nature and results of the paper; it may also be used as an aid in retrieving information. The length of an abstract will clearly depend on the length and difficulty of the paper, but in general it should not exceed 150 words. It should be typed on a separate page, under the heading "Abstract", followed by the title of the paper. Formulas should be used as sparingly as possible. The abstract should not make reference to results or formulas in the body of the paper—it should be self-contained.

Footnotes. Footnotes should be reduced to a minimum and, where possible, should be replaced by remarks in the text or in the references; formulas in footnotes should be avoided. Footnotes in the text should be identified by superscript numbers and typed together, double-spaced, on a separate page.

Key Words. Included as the first footnote on page 1 should be the headings:

American Mathematical Society 1970 subject classification. Primary—; Secondary—.

Key words and phrases:

The classification numbers representing the primary and secondary subjects of the article may be found with instructions for its use, as an Appendix to *Mathematical Reviews* Index to Volume 39, June 1970. (See, also, *The Notices of the American Mathematical Society*, June 1970, pp. 616–618, for more details.) The key words and phrases should describe the subject matter of the article; generally they should be taken from the body of the paper.

List of Symbols. A completely typewritten list of symbols, identified typographically, not mathematically, should be attached to the manuscript on a separate page. Distinguish between "oh" and "zero"; "ell" and "one"; "kappa" and "kay", etc. Indicate also when special type is required (Greek, German, script, boldface, etc.); other letters will be set in italics.

Figures and Tables. Figures, charts, and diagrams should be prepared in a form suitable for photographic reproduction and should be professionally drawn twice the size they are to be printed. (These need not be submitted until the paper has been accepted for publication.) Tables should be typed on separate pages with accompanying footnotes immediately below the table.

Formulas. Fractions in the text are preferably written with the solidus or negative exponent; thus, $(a + b)/(c + d)$ is preferred to $\frac{a + b}{c + d}$, and $(2\pi)^{-1}$ or $1/(2\pi)$ to $\frac{1}{2\pi}$. Also, $a^{b(c)}$ and $a_{b(c)}$ are preferred to a^{bc} and a_{bc} , respectively. Complicated exponentials should be represented with the symbol exp. A fractional exponent is preferable to a radical sign.

References. References should be typed double-spaced and should follow the style:

[5] Wilks, S. S. (1938). The large-sample distribution of the likelihood ratio for testing composite hypotheses. *Ann. Math. Statist.* 9 60–62.

In textual material, the format "... Wilks (1938) ..." is normally preferred to "... Wilks [5] ...". Multiple references can be distinguished as "... Wilks (1938a) ...". Abbreviations for journals should be taken from *Mathematical Reviews* Index to Volume 40, 1970, pp. 1683–1702.

Proofs. Author will ordinarily receive galley proofs. Corrected galley proofs should be sent to the Managing Editor of the *Annals of Mathematical Statistics*. (For current address, see the latest issue of the *Annals*.)

Contents (Continued)

The serial correlation coefficients of waiting times in the stationary GI/M/1 queue	A. G. PAKES 1727
Short Communications	
On the convergence of binomial to Poisson distributions	GORDON SIMONS AND N. L. JOHNSON 1735
A weak convergence theorem for random sums in a normed space	PEDRO J. FERNANDEZ 1737
The asymptotic behavior of the Smirnov test compared to standard "optimal procedures"	GEORGE KALISH AND PIOTR W. MIKULSKI 1742
On an inequality for order statistics	HAROLD D. SHANE 1748
The distributions of some test criteria in multivariate analysis	C. G. TROSKIE 1752
On the number of generators of saturated main effect fractional replicates	B. L. RAKTOE AND W. T. FEDERER 1758
Asymptotic behavior of high order means	JAMES W. DANIEL 1761
A counterexample in renewal theory	DAVID ROOT 1763
On the nonexistence of ϵ -optimal randomized stationary policies in average cost Markov decision models	SHELDON M. ROSS 1767
A note on the weak convergence of stochastic processes	M. J. WICHURA 1769
A limit theorem for a branching process with state-dependent immigration	JAMES H. FOSTER 1773
Correction Notes	
Correction to "A property of Poisson processes and its application to macroscopic equilibrium of particle systems"	MARK BROWN 1777
Correction to "One-sided problems in multivariate analysis"	MICHAEL D. PERLMAN 1777
Correction to "An iterative procedure for estimation in contingency tables"	STEPHEN E. FIENBERG 1778
Correction to "The representation of functionals of Brownian motion"	J. M. C. CLARK 1778
Book Reviews	
Review of "Derivation and Martingales," by C. A. Hayes and C. Y. Pauc	K. KRICKEBERG 1779
Review of "Total Positivity," by Samuel Karlin	ALBERT W. MARSHALL 1779
Abstracts	1782
New and Notices	1800
Publications Received	1814
