A reference book for researchers . . . a definitive text for graduate students and instructors of sequential analysis

Sequential Tests of Statistical Hypotheses

by B. K. Ghosh, *Lehigh University*

This book is designed to serve as a reference book for researchers in the field and to provide graduate students and instructors of sequential analysis with a definitive text. All major results through 1969 are included, and the logical connections among them are indicated.

Many well-known problems of statistical inference, and some totally new ones as well, are solved by sequential methods. Numerous exercises, with hints for their solution, have also been provided.

Contents include classical fixed-sample tests of statistical hypotheses, sequential tests with special reference to sequential probability ratio tests, the notion of invariance, and sequential tests obtained therefrom. Research workers will find the exposition and coverage of this book extremely lucid and useful.

454 pp (1970) $15.00

If you would like more information on SEQUENTIAL TESTS OF STATISTICAL HYPOTHESES, send for your free 10-day examination copy. Just fill in the coupon below or write directly to Addison-Wesley.

Ten-Day Free Examination

STATISTICAL THEORY AND METHOD ABSTRACTS

A Journal of the International Statistical Institute

The object of this abstracting service is to cover published papers concerned with statistical theory, including relevant aspects of probability and mathematical methods, and new contributions to statistical method. These abstracts provide valuable information on new developments for studying problems in many fields: such as frequency distributions, estimating and testing problems, sampling and experimental designs, variance analysis, spectral theory and other methods in time-series analysis, queueing theory, reliability and acceptance inspection. Journals appearing in all parts of the world, on mathematics and statistics, or on other fields and possible contribution of interest are regularly scanned for suitable papers. Abstracts are also prepared from collections of papers such as reports of conferences, symposia and seminars; technical reports of experiment and research stations are covered.

The abstracts do not exceed 400 words, with occasional "double abstracts" for papers where this size is not sufficient to represent the paper. The language is English; the language of the original paper is indicated. The headings give the name and address of the author together with the Journal in which the paper is published; moreover, a note is added on the number of references, tables and figures.

The classification scheme which is used in this Journal supplies a division of all abstracts in twelve main sections. The pages of the Journal are colour-tinted in accordance with these main sections. Each section is further sub-divided to indicate the main topic of the paper; a secondary number denotes the most important additional topic referred to by the author. A special index in each part links together these two classifications. This scheme is arranged to facilitate transfer to punch cards. Papers containing new statistical tables are listed in a separate index.

The abstracts are numbered serially, the volume number being inserted as a prefix. The Journal is published four times a year and contains approximately 1,000 abstracts. An author index, the secondary classification index and the new statistical tables index are published in each issue and combined in a yearly supplement which also contains a list of all Journals represented in the volume by one or more abstracts.

Annual Subscription	£10.00 (U.S. $30.00)
Single Number	£ 3.50 (U.S. $ 9.00)
Loose Leaf Binders for Single Abstract Sheets	£ 1.00 including postage and packing.

Applications

Application of the Randomized Response Technique in Obtaining Quantitative Data
Bernard G. Greenberg, Roy R. Kuebler, Jr., James R. Abernathy and Daniel G. Horvitz

A Review of the Claim That Excess Morbidity and Disability Can Be Ascribed to Smoking
Theodor D. Sterling

The Normal Income Hypothesis in Chile *Roger R. Betancourt*

The Retention Model: A Markov Chain with Variable Transition Probabilities *Neil W. Henry*

The Effect of Nonhomogeneous Populations on Markov Steady-State Probabilities
Donald G. Morrison, William F. Massy and Fred Silverman

Linkages of Intrinsic to Age-Specific Rates *Nathan Keyfitz*

A Note on the Distribution of Stock Price Changes *John Teichmoeller*

Accident Rate Potential: An Application of Multiple Regression Analysis of a Poisson Process
Donald C. Weber

Comment on "Discriminatory Bias in Rates Charged by the Canadian Automobile Insurance Industry"
C. L. Wilcken

Rejoinder *R. A. Holmes*

Theory and Methods

A Uniformly Asymptotically Efficient Estimator of a Location Parameter *Kei Takeuchi*

Optimally Robust Linear Estimator of Location *Allan Birnbaum, Eugene Laska and Morris Meisner*

Efficiency-Robust Systematic Linear Estimators of Location *Valerie Mike*

Optimal Experimental Design for Polynomial Regression *Stephen M. Stigler*

Minimax Designs *V. N. Murty*

Sequential One-Sample Grouped Signed Rank Tests for Symmetry: Basic Procedures
Harrison D. Weed, Jr. and Ralph A. Bradley

Bayesian and Non-Bayesian Analysis of the Log-Normal Distribution and Log-Normal Regression
Arnold Zellner

Parameter Estimates for Symmetric Stable Distributions *Eugene F. Fama and Richard Roll*

Partitioning of Chi-Square, Analysis of Marginal Contingency Tables, and Estimation of Expected Frequencies in Multidimensional Contingency Tables *Leo A. Goodman*

Asymptotic Properties of Maximum Likelihood Estimators in Some Nonstandard Cases *Lionel Weiss*

Maximum Likelihood Estimation from Grouped Poisson Data
Walter H. Carter, Jr., Jacob Van Bowen, Jr. and Raymond H. Myers

The Efficiency of Least Squares in Estimating a Stable Seasonal Pattern *R. D. Terrell and N. E. Tuckwell*

Approximate Best Linear Prediction of a Certain Class of Stationary and Nonstationary Noise Distorted Signals *Eugene Sobel*

Two-Stage Least Squares and Econometric Systems Linear in Parameters but Nonlinear in the Endogenous Variables *Harry H. Kelejian*

Distribution of a Structural t-Statistic for the Case of Two Included Endogenous Variables
David H. Richardson and Robert J. Rohr

The Distribution of Linear Functions of Independent F Variates *Donald F. Morrison*

Some Results for Discrete Unimodality *J. Keilson and H. Gerber*

Canonical Expansion of the Compound Correlated Bivariate Poisson Distribution
M. A. Hamdan and H. A. Al-Bayyati

Some Properties of the Range in Samples from Tukey's Symmetric Lambda Distributions
Brian L. Joiner and Joan R. Rosenblatt

A Random Normal Number Generator for 32-Bit-Word Computers *Edwin H. Chen*

A Generalized Estimator for the Mean of a Finite Population Using Multi-Auxiliary Information
Surendra K. Srivastava

Interval Estimation of the Largest Variance of k Normal Populations *K. M. Lal Saxena*

A Simple Method for Approximating the Variance of a Complicated Estimate. *Ralph S. Woodruff*

Invited Papers

Whither Econometrics? *L. R. Klein*

THE INSTITUTE OF MATHEMATICAL STATISTICS

(Organized September 12, 1935)

OFFICERS

President:

William Kruskal, Department of Statistics, University of Chicago, Chicago, Illinois 60637

President-Elect:

R. C. Bose, Department of Statistics, University of North Carolina, Chapel Hill, North Carolina 27514

Executive Secretary:

Leo Katz, Statistical Laboratory, Michigan State University, East Lansing, Michigan 48823

Program Secretary:

R. V. Hogg, Department of Statistics, University of Iowa, Iowa City, Iowa 52240

Treasurer:

George J. Resnikoff, Department of Statistics, California State College, Hayward, California 94542

Editor:

Ingram Olkin, Department of Statistics, Stanford University, Stanford, California 94305

Managing Editor:

K. J. C. Smith, Department of Statistics, University of North Carolina, Chapel Hill, North Carolina 27514

The purpose of the Institute of Mathematical Statistics is to encourage the development, dissemination, and application of mathematical statistics.

Membership dues including a subscription to the ANNALS of MATHEMATICAL STATISTICS are $20.00 per year for residents of the United States or Canada and $12.00 per year for residents of other countries. Special student rates of $10.00 per year are available to students residing in the U. S. and Canada. Inquiries regarding membership in the Institute should be sent to the Treasurer of the Institute.

Membership in the Institute of Mathematical Statistics is not required of authors of papers in the *Annals of Mathematical Statistics* and the fact of membership or non-membership is given no weight in the consideration of submitted manuscripts.

(Instructions for authors—*continued*)

Authors are asked to keep in mind the typographical difficulties and high cost of printing complicated mathematical formulas. The difference between capital and lower-case letters should be clearly shown; care should be taken to avoid confusion between such pairs as zero and the letter O, the numeral 1 and the letter l, numeral 1 used as superscript and prime ($'$), alpha and a, kappa and k, mu and u, nu and v, eta and n, etc. Bars above groups of letters (e.g., $\overline{\log x}$) and underlined letters (e.g., $\underline{x}$) are difficult to print and should be avoided; lim inf and lim sup are preferable to $\overline{\lim}$ and $\underline{\lim}$. Symbols are automatically italicized by the printer and should not be underlined on manuscripts. Boldface letters may be indicated by underlining with a wavy line on the manuscript; boldface subscripts and superscripts are not available. Unusual accents on letters should be avoided or replaced by superscripts or subscripts. Complicated exponentials should be represented with the symbol exp. In writing square roots the fractional exponent is preferable to the radical sign. Fractions are preferably written with the solidus or negative exponent; thus $(a + b)/(c + d)$ rather than $\frac{a + b}{c + d}$, and $(2\pi)^{-1}$ rather than $\frac{1}{2\pi}$. In addition to decreasing the printing costs, a simple notation greatly improves the readability and appearance of a manuscript.

Authors will ordinarily receive only galley proofs. 100 reprints with covers will be furnished free. Additional reprints and covers may be ordered at cost on forms which will be provided by the printer.

Contents (Continued)

Asymptotic efficiency of a class of aligned rank order tests for multiresponse experiments in some incomplete block designs ..... PRANAB KUMAR SEN 1104

Large-sample posterior distributions for finite populations .. ALASTAIR SCOTT 1113

A new family of BIBD's ..... E. NEMETH 1118

A problem concerning generalized age-dependent branching processes with immigration ..... S. D. DURHAM 1121

On the existence of absolute moments for the extinction time of a Galton-Watson process ..... R. V. ERICKSON 1124

Almost sure convergence of uniform transport processes to Brownian motion RICHARD J. GRIEGO, DAVID HEATH AND ALBERTO RUIZ-MONCAYO 1129

A Hájek-Rényi type inequality for stochastic vectors with applications to simultaneous confidence regions ..... PRANAB KUMAR SEN 1132

Correction Note

Corrections to "Strong consistency of certain sequential estimators" ROBERT H. BERK 1135

Book Reviews

Review of "Order Statistics," by H. A. David ..... RICHARD I. SAVAGE 1138

Review of "The Advanced Theory of Statistics, Vol. 3," 2nd ed., by M. G. Kendall and S. Stuart ..... G. S. WATSON 1138

Review of "Introduction to Stochastic Processes in Biostatistics," by Chin Long Chiang ..... PETER BROCKWELL 1140

Abstracts 1142

News and Notices 1154
