

## STATISTICAL THEORY AND METHOD ABSTRACTS

A Journal of the International Statistical Institute

The object of this abstracting service is to cover published papers concerned with statistical theory, including relevant aspects of probability and mathematical methods, and new contributions to statistical method. These abstracts provide valuable information on new developments for studying problems in many fields: such as frequency distributions, estimating and testing problems, sampling and experimental designs, variance analysis, spectral theory and other methods in time-series analysis, queueing theory, reliability and acceptance inspection. Journals appearing in all parts of the world, on mathematics and statistics, or on other fields and possible contribution of interest are regularly scanned for suitable papers. Abstracts are also prepared from collections of papers such as reports of conferences, symposia and seminars; technical reports of experiment and research stations are covered.

The abstracts do not exceed 400 words, with occasional "double abstracts" for papers where this size is not sufficient to represent the paper. The language is English; the language of the original paper is indicated. The headings give the name and address of the author together with the Journal in which the paper is published; moreover, a note is added on the number of references, tables and figures.

The classification scheme which is used in this Journal supplies a division of all abstracts in twelve main sections. The pages of the Journal are colour-tinted in accordance with these main sections. Each section is further sub-divided to indicate the main topic of the paper; a secondary number denotes the most important additional topic referred to by the author. A special index in each part links together these two classifications. This scheme is arranged to facilitate transfer to punch cards. Papers containing new statistical tables are listed in a separate index.

The abstracts are numbered serially, the volume number being inserted as a prefix. The Journal is published four times a year and contains approximately 1,000 abstracts. An author index, the secondary classification index and the new statistical tables index are published in each issue and combined in a yearly supplement which also contains a list of all Journals represented in the volume by one or more abstracts.

<i>Annual Subscription</i>	£7. 10s. (U.S.A. \$24.00)
<i>Single Number</i>	£2. 5s. (U.S.A. \$ 7.00)
<i>Loose Leaf Binders for Single Abstract Sheets</i>	16s. 3d. including postage and packing.

Number 330

## Applications

- On the Appropriateness of the Correlation Coefficient with a 0, 1 Dependent Variable  
*John Neter and E. Scott Maynes*
- A Reevaluation of the Predictive Ability of Plant and Equipment Anticipations  
*Irwin Friend and William Thomas*
- Forecasting Specific Turning Points  
*Richard Long*
- Measuring the Value of Housing Quality  
*John F. Kain and John M. Quigley*
- A Report on the Accuracy of Some Widely Used Least Squares Computer Programs  
*Roy H. Wampler*
- Response Error and Questioning Technique in Surveys of Earnings Information  
*Michael E. Borus*
- Distributional Effects in Demand Analysis: Observations and Predictive Tests  
*D. J. Laughunn*
- Estimation of Dynamic Demand Relations from a Time Series of Family Budget Data  
*Feng-Yao Lee*
- The Coefficient of Interarea Variation as a Measure of Spatial Income Inequality  
*Barbara B. Murray*
- A Quantitative Measure of the Risk Factor in Investment Decisions  
*T. M. Hammonds and D. I. Padberg*
- A Discriminant Analysis of Employment in Defense and Nondefense Industries  
*Gerald F. Higgins*
- A Stochastic Model for Determining the Economic Prospects of Petroleum Exploration Over Large Regions  
*Donald Guthrie and Mary N. Youssef*
- Tables of Normal Percentile Points  
*John S. White*

## Theory and Methods

- A Sequential Modification of the UMP Test for Binomial Probabilities  
*Breslow*
- On the Posterior Mean and Variance of a Population Mean  
*Ericson*
- Optimal Design of Sampling from Finite Populations: A Critical Review and Indication of New Research Areas  
*Solomon and Zaeks*
- Truncation Effect in Closed and Open Birth Interval Data  
*Sheps, et. al.*
- The Geometry of a Two by Two Contingency Table  
*Fienberg and Gilbert*
- Hotelling's  $T^2$  Test Under Symmetry Conditions  
*Baton and Efron*
- Estimation of Pareto's Law from Grouped Observations  
*Aigner and Goldberger*
- Least Squares and Grouping Estimators in the Errors in Variables Model  
*Richardson and Wu*
- On Mixtures of Distributions with Applications to Estimation  
*Ifram*
- On Analysing Mixed Samples  
*John*
- Optimum Sample Size for a Problem in Choosing the Population with the Largest Mean  
*Somerville*
- Probability Sampling with Marginal Constraints  
*Jessen*
- Extensions of the General Linear Hypothesis Model  
*Millekin and Graybill*
- The Analysis of Structural Effects in Experimental Design  
*Mallios*
- Optimal Fractional Factorial Plans for Main Effects Orthogonal to Two-Factor Interactions: 2<sup>m</sup> Series  
*Srivastava and Anderson*
- On Using an Incorrect Value of Rho in Group Divisible Two-Associate PBIB Designs  
*Cleroux*
- Inadmissibility of the Usual Scale Estimate for a Shifted Exponential Distribution  
*Arnould*
- Linear Estimation of the Location and Scale Parameters of the Cauchy Distribution Based on Sample Quantiles  
*Chan*
- Sample Sizes for Approximate Independence of Largest and Smallest Order Statistics  
*Walsh*
- The Minimum Expectation in  $X^2$ -Goodness of Fit Tests and the Accuracy of Approximations for the Null Distribution  
*Yarnold*
- A Test of Fit for the Negative Binomial and Other Contagious Distributions  
*Gurland and H'inz*
- An Asymptotic  $X^2$  Test for the Equality of Two Correlation Matrices  
*Jennrich*
- Multiple Regression with Inequality Constraints: Pretesting Bias, Hypothesis Testing and Efficiency  
*Lovell and Prescott*
- A Characterization of Hypergeometric Distributions  
*Skibinsky*
- Size Allometry: Size and Shape Variables with Characterizations of the Lognormal and Generalized Gamma Distributions  
*Mosimann*
- The Small Sample Power of One-Sided Kolmogorov Tests for a Shift in Location of the Normal Distribution  
*Knott*
- The Small Sample Behavior of Some Robust Linear Estimators of Location  
*Gastwirth and Cohen*
- Linear Interpolation Within McCornack's Table of the Wilcoxon Matched Pair Signed Rank Statistic  
*Claypool*
- Percentage Points of Some Non-Parametric Tests for Independence and Empirical Power Comparisons  
*Bhattacharyya, Johnson, and Neave*
- Tables of Poisson Sums of Normal Variables  
*Greenberg*

# TECHNOMETRICS

*A Journal of Statistics  
for the Physical, Chemical and Engineering Sciences*

## CONTENTS

TECHNOMETRICS, Vol. 12, No. 3, AUGUST 1970

An Approach for Economic Distribution Between Alternative Chemical Syntheses	A. H. Bobis and L. B. Andersen
A Comparison of Two Model-Discrimination Criteria	D. Meeter, W. Pirie, W. Blot
A Method of Constrained Randomization for $2^n$ Factorials	K. J. Tjahrt and D. L. Weeks
Three Stage Nested Designs for Estimating Variance Components	C. H. Goldsmith and D. W. Gaylor
Variance Reduction Techniques for Monte Carlo Sampling from Student Distribution	D. A. Relles
The Performance of Some Rough Tests for Bivariate Normality Before and After Coordinate Transformations To Normality	C. J. Kowalski
An Application of a Lagrangian Penalty Function to Obtain Optimal Redundancy	H. J. Greenberg
On Identifying the Population of Origin of Each Observation in a Mixture of Observations from Two Normal Populations	S. John
On Identifying the Population of Origin of Each Observation in a Mixture of Observations from Two Gamma Populations	S. John
Some Experiences with a Nonlinear Experimental Design Criterion	M. J. Boz
On Generalized Inverses, Ridge Regression, Biased Linear Estimation and Nonlinear Estimation	D. W. Marquardt
Missing Values in Multiresponse Nonlinear Model Fitting	M. J. Boz, N. R. Draper, W. G. Hunter
Why Stepdown Procedures in Variable Selection	N. Mantel
The First Occurrence of $n$ Successes in $N$ Trials	I. Greenberg
On Sequential Tests of the Binomial Distribution	A. H. Corneliussen and D. W. Ladd
Asymptotic Properties of the Restricted Double Sampling Plan	S. Johansen
Charts for the Interpretation and Estimation of the Second Order Autoregressive Model	C. M. Stralkowski, S. M. Wu, R. E. DeVor
Regression and Correlation in a Bivariate Distribution with Different Marginal Densities	S. H. Park
<b>NOTES</b>	
Moments, Variances, and Covariances of Sines and Cosines of Arguments which are Subject to Random Error	J. W. Chapman
A Note on the 'Round Robin' Design	D. ConniFe
Waiting-Time for a Large Gap in an Alternating Renewal Process	T. Haynes
An Exact Asymptotically Efficient Confidence Bound for Reliability in the Case of the Gumbel Distribution	L. H. Herbach
A Note on the Reliability of a System with Spares Which Operates at Discrete Times	M. R. Dyer and D. H. Young
QUERY	Answered by D. Badentus
<b>BOOK REVIEWS</b>

<b>LETTER TO THE EDITOR</b>	
<b>ERRATA</b>	
<b>NOTICES</b>	

The purpose of TECHNOMETRICS is to contribute to the development and use of statistical methods in the physical, chemical and engineering sciences. This objective places a high premium on succinct communication among the physical scientist, engineer, statistician and mathematician. The journal will accept for publication papers describing new statistical techniques expected to be useful in these sciences, papers illustrating the application of known statistical methods to new or novel environments, expository or tutorial papers on particular statistical methods, and papers dealing with the philosophy and problems of applying statistical methods to research, development, design and performance. Brief descriptions of problems requiring solution and short technical notes will also be accepted for publication.

For further information please contact TECHNOMETRICS Post Office Box 587 Benjamin Franklin Station Washington, D. C. 20004.

## BIOMETRICS

*Journal of the Biometric Society*

Vol. 26, No. 3

CONTENTS

September 1970

- Control of a pest population ..... N. G. Becker  
Age distributions ..... M. S. Bartlett  
A new deterministic model for the interaction between predator and prey ..... C. Pearce  
The removal method for two and three samples ..... G. A. F. Seber and J. F. Whale  
A stochastic model for the growth of cells in cancer ..... K. S. S. Iyer and V. N. Saksena  
Sequential decision for a binomial parameter with delayed observations ..... S. C. Choi and V. A. Clark  
Lengths and diameters of plant roots in non-random populations by analysis of plane surfaces  
A. R. G. Lang and F. M. Melhuish  
Survival of a mutation under mixed positive assortative and random mating. I. One locus, two alleles without dominance ..... J. A. Winston  
On the detection and estimation of a linkage between a locus influencing a quantitative character and a marker locus ..... S. D. Jayakar  
Optimum allocation of selection intensity in two stages of truncation selection ..... G. Namkoong  
Index selection for direct and maternal genetic components of economic traits ..... L. D. Van Vleck  
Estimation of variance and covariance components in the mixed model ..... W. R. Harvey  
Large sample variances of maximum likelihood estimators of variance components using unbalanced data ..... S. R. Searle  
Generalized distance and discrete variables ..... T. W. Kurczynski  
Multi-variate probit analysis ..... J. R. Ashford and R. R. Sowden  
A technique of nonparametric multivariate analysis ..... N. Mantel and R. S. Valand  
On component analysis of factorial and fractional factorial experiments ..... M. N. Das and R. C. Jain  
NOTES  
A classification problem involving human chromosomes ..... R. N. Curnow  
Design of experiments to estimate heritability by regression of offspring on selected parents ..... W. G. Hill  
Parametric analysis of disease incidences in multiway tables ..... G. Berry  
A note on Kimball's paper "Models for the estimation of competing risks from grouped data" ..... M. C. Pike  
A new table for the estimation of particle density ..... Grace Wyshak and Katherine Detre

Biometrics is published quarterly. Its objects are to describe and exemplify the use of mathematical and statistical methods in biological and related sciences in a form assimilable by experimenters. The annual non-member subscription rate is \$15.00. Inquiries, non-member subscriptions, and orders for back issues, should be addressed to: Biometrics Business Office, Department of Experimental Statistics, North Carolina State University, Raleigh, North Carolina 27607 U.S.A. Editorial correspondence should be directed to: Biometrics Editorial Office, Department of Biostatistics, School of Public Health, University of North Carolina, Chapel Hill, North Carolina 27514 U.S.A.

# THE INSTITUTE OF MATHEMATICAL STATISTICS

(Organized September 12, 1935)

## OFFICERS

### *President:*

Jack C. Kiefer, Department of Mathematics, Cornell University, Ithaca, New York  
14850

### *President-Elect:*

William Kruskal, Department of Statistics, University of Chicago, Chicago, Illinois  
60637

### *Executive Secretary:*

Leo Katz, Statistical Laboratory, Michigan State University, East Lansing, Michigan  
48823

### *Program Secretary:*

R. V. Hogg, Department of Statistics, University of Iowa, Iowa City, Iowa 52240

### *Treasurer:*

George J. Resnikoff, Department of Statistics, California State College, Hayward,  
California 94542

### *Editor:*

Ingram Olkin, Department of Statistics, Stanford University, Stanford, California  
94305

### *Managing Editor:*

K. J. C. Smith, Department of Statistics, University of North Carolina, Chapel Hill,  
North Carolina 27514

The purpose of the Institute of Mathematical Statistics is to encourage the development, dissemination, and application of mathematical statistics.

Membership dues including a subscription to the ANNALS of MATHEMATICAL STATISTICS are \$20.00 per year for residents of the United States or Canada and \$12.00 per year for residents of other countries. Special student rates of \$10.00 per year are available to students residing in the U. S. and Canada. Inquiries regarding membership in the Institute should be sent to the Treasurer of the Institute.

Membership in the Institute of Mathematical Statistics is not required of authors of papers in the *Annals of Mathematical Statistics* and the fact of membership or non-membership is given no weight in the consideration of submitted manuscripts.

---

### (Instructions for authors—continued)

Authors are asked to keep in mind the typographical difficulties and high cost of printing complicated mathematical formulas. The difference between capital and lower-case letters should be clearly shown; care should be taken to avoid confusion between such pairs as zero and the letter O, the numeral 1 and the letter l, numeral 1 used as superscript and prime ('), alpha and  $\alpha$ , kappa and  $k$ , mu and  $\mu$ , nu and  $\nu$ , eta and  $\eta$ , etc. Bars above groups of letters (e g.,  $\overline{\log x}$ ) and underlined letters (e g.,  $\underline{x}$ ) are difficult to print and should be avoided;  $\liminf$  and  $\limsup$  are preferable to  $\underline{\lim}$  and  $\overline{\lim}$ . Symbols are automatically italicized by the printer and should not be underlined on manuscripts. Boldface letters may be indicated by underlining with a wavy line on the manuscript; boldface subscripts and superscripts are not available. Unusual accents on letters should be avoided or replaced by superscripts or subscripts. Complicated exponentials should be represented with the symbol  $\exp$ . In writing square roots the fractional exponent is preferable to the radical sign. Fractions are preferably written with the solidus or negative exponent; thus  $(a + b)/(c + d)$  rather than  $\frac{a + b}{c + d}$ , and  $(2\pi)^{-1}$  rather than  $\frac{1}{2\pi}$ . In addition to decreasing the printing costs, a simple notation greatly improves the readability and appearance of a manuscript.

Authors will ordinarily receive only galley proofs. Fifty reprints without covers will be furnished free. Additional reprints and covers may be ordered at cost on forms which will be provided by the printer.

## Contents (Continued)

A characterization of certain infinitely divisible laws .....	ALAN RUEGG	1354
A simple proof of an inequality for multivariate normal probabilities of rectangles	KUMAR JOGDEO	1357
A note on uniform convergence of stochastic processes	NARESH C. JAIN AND G. KALLIANPUR	1360
General formulae for the central moments of certain serial correlation coefficient approximations .....	ADRIENNE W. KEMP	1363
On a class of uniformly admissible estimators of a finite population total	W. A. ERICSON	1369
Acknowledgment of Priority .....		1373
Correction Notes		
Correction to "A limit theorem for conditioned recurrent random walk attracted to a stable law" .....	BARRY BELKIN	1374
Correction to "The weighted likelihood ratio, sharp hypotheses about chances, the order of a Markov chain" .....	JAMES DICKEY AND B. P. LIENTZ	1374
Correction to "Jackknifing U-statistics" .....	JAMES N. ARVESEN	1375
Correction to "On the probability of large deviations of families of sample means"	J. SETHURAMAN	1376
Book Review .....	M. FRANK NORMAN	1381
Abstracts .....		1384
News and Notices .....		1394
Publications Received .....		1396

---

**CHANGE OF EDITOR.** Manuscripts should be submitted to the new Editor, Ingram Olkin, Department of Statistics, Stanford University, Stanford, California 94305. Correspondence about manuscripts submitted before July 1, 1970, should be directed to Z. W. Birnbaum, Department of Mathematics, University of Washington, Seattle, Washington 98105.
