

Mathematics: Its Content, Methods, and Meaning, Second Edition

edited by A. D. Aleksandrov, A. N. Kolmogorov, and M. A. Lavrent'ev translated by S. H. Gould, K. A. Hirsch, and T. Bartha

translation edited by S. H. Gould

Published in cooperation with the American Mathematical Society

These volumes have achieved the status of a standard work and are now being made available in paper editions for the first time.

They cover the whole sweep of the development of mathematics from earliest times to the present, and cover the whole range of its content from the theory of numbers to the geometry of colors, and thus fulfill their purpose of providing a kind of diving bell, a means of access for the seriously interested student into mathematical depths usually considered hopelessly over his head.

"This unique work presents the amazing panorama of mathematics proper. It is the best answer in print to what mathematics contains both on the elementary and advanced levels." — Professor Morris Kline, *New York University*

"The high quality of exposition, the unparalleled breadth, and the emphasis on concept rather than proof for proof's sake should do much to raise the level of mathematical literacy everywhere." — Roger S. Pinkham, *American Scientist*

"... nothing less than a major contribution to the scientific culture of this world in the mid-20th century." — Harry Schwartz, *The New York Times Book Review*

"This is a masterful English translation of a stupendous and formidable mathematical masterpiece originally published in Russian ... one reads actual mathematics in these three volumes, not just about mathematics." — *Social Science*

The Mathematical Sciences: A Collection of Essays

edited by COSRIMS

A distinguished gathering of mathematical scientists address themselves here to the large and growing audience of curious and thoughtful readers, including those without formal training in the higher reaches of mathematics and those who believe they may have forgotten what they once knew. Some of the contributors describe striking developments and achievements in contemporary mathematics; others concentrate on the myriad applications of mathematics to other fields.

Many of the essays can be understood by today's breed of scientifically oriented high-school student. They could be equally appealing to his father, whose most elaborate application of mathematics may be the completion of the income-tax form, but whose curiosity about some of the most heady intellectual adventures of this century may have survived his graduation into middle age.

The book was prepared by the Committee on Support of Research in the Mathematical Sciences (COSRIMS) for the National Academy of Sciences as part of an effort to gauge the present status and envision the future needs and directions of the mathematical sciences in the United States.

STATISTICAL THEORY AND METHOD ABSTRACTS

A Journal of the International Statistical Institute

The object of this abstracting service is to cover published papers concerned with statistical theory, including relevant aspects of probability and mathematical methods, and new contributions to statistical method. These abstracts provide valuable information on new developments for studying problems in many fields: such as frequency distributions, estimating and testing problems, sampling and experimental designs, variance analysis, spectral theory and other methods in time-series analysis, queueing theory, reliability and acceptance inspection. Journals appearing in all parts of the world, on mathematics and statistics, or on other fields and possible contribution of interest are regularly scanned for suitable papers. Abstracts are also prepared from collections of papers such as reports of conferences, symposia and seminars: technical reports of experiment and research stations are covered.

The abstracts do not exceed 400 words, with occasional "double abstracts" for papers where this size is not sufficient to represent the paper. The language is English; the language of the original paper is indicated. The headings give the name and address of the author together with the Journal in which the paper is published moreover a note is added on the number of references, tables and figures.

The classification scheme which is used in this Journal supplies a division of all abstracts in twelve main sections. The pages of the Journal are colour-tinted in accordance with these main sections. Each section is further sub-divided to indicate the main topic of the paper; a secondary number denotes the most important additional topic referred to by the author. A special index in each part links together these two classifications. This scheme is arranged to facilitate transfer to punch cards. Papers containing new statistical tables are listed in a separate index.

The abstracts are numbered serially, the volume number being inserted as a prefix. The Journal is published four times a year and contains approximately 1,000 abstracts. An author index, the secondary classification index and the new statistical tables index are published in issue and combined in a yearly supplement which also contains a list of all Journals represented in the volume by one or more abstracts.

<i>Annual Subscription</i>	£7. 10s. (U.S.A. \$24.00)
<i>Single Number</i>	£2. 5s. (U.S.A. \$ 7.00)
<i>Loose Leaf Binders for</i>	16s. 3d including postage
<i>Single Abstract Sheets</i>	and packing.

TECHNOMETRICS

*A Journal of Statistics
for the Physical, Chemical and Engineering Sciences*

CONTENTS

TECHNOMETRICS, Vol. 11, No. 2, MAY 1969

Some General Remarks on Consulting in Statistics.....	Cuthbert Daniel
The Statistical Consultant in a Scientific Laboratory.....	J. M. Cameron
A Generalized Application of Instrumental Variable Estimation to Straight Line Relations When Both Variables are Subject to Error.....	William S. Mallios
A Numerical Investigation of Several One Dimensional Search Procedures in Nonlinear Regression Problems.....	P. D. Flanagan, P. A. Vitale and J. Mendelsohn
Sampling Mixtures of Multi-Sized Particles: An Application of Renewal Theory.....	Richard L. Scheaffer
Small Sample Power Curves for the Two Sample Location Problem.....	Paul Leaverion and John J. Birch
Which Product is Better?.....	Norman R. Draper, William G. Hunter and David E. Tierney
A Graphical Method for Making Multiple Comparisons of Frequencies.....	Maynard S. Renner
Estimation of a Mean When One Observation may be Spurious.....	James R. Veale and D. V. Huntsberger
Procedures and Tables for Evaluating Dependent Mixed Acceptance Sampling Plans.....	E. G. Schilling and H. F. Dodge
The Moments of Log Weibull Order Statistics.....	John S. White
NOTES	
A Confidence Region for the Log Normal Hazard Function.....	Arthur Nadas
A Note on the Gain in Precision for Optimal Allocation in Regression as Applied to Extrapolation in S-N Fatigue Testing.....	R. E. Little and Emil H. Jebe
Exact Tests of Significance in Contingency Tables.....	M. J. R. Healy
A Note on Designs for Model Discrimination: Variance Unknown Case.....	William J. Hill and William G. Hunter

NOTICES
BOOK REVIEWS

The purpose of TECHNOMETRICS is to contribute to the development and use of statistical methods in the physical, chemical and engineering sciences. This objective places a high premium on succinct communication among the physical scientist, engineer, statistician and mathematician. The journal will accept for publication papers describing new statistical techniques expected to be useful in these sciences, papers illustrating the application of known statistical methods to new or novel environments, expository or tutorial papers on particular statistical methods, and papers dealing with the philosophy and problems of applying statistical methods to research, development, design and performance. Brief descriptions of problems requiring solution and short technical notes will also be accepted for publication.

For further information please contact TECHNOMETRICS Post Office Box 587 Benjamin Franklin Station Washington, D. C. 20004.

THE INSTITUTE OF MATHEMATICAL STATISTICS

(Organized September 12, 1935)

OFFICERS

President:

Wassily Hoeffding, Department of Statistics, University of North Carolina, Chapel Hill, North Carolina 27514

President-Elect:

Jack C. Kiefer, Department of Mathematics, Cornell University, Ithaca, New York 14850

Executive Secretary:

Leo Katz, Statistical Laboratory, Michigan State University, East Lansing, Michigan 48823

Program Secretary:

R. V. Hogg, Department of Statistics, University of Iowa, Iowa City, Iowa 52240

Treasurer:

George J. Resnikoff, Department of Statistics, California State College, Hayward, California 94542

Editor:

Z. W. Birnbaum, Department of Mathematics, University of Washington, Seattle, Washington 98105

Managing Editor:

Paul L. Meyer, Department of Mathematics, Washington State University, Pullman, Washington 99163

The purpose of the Institute of Mathematical Statistics is to encourage the development, dissemination, and application of mathematical statistics.

Membership dues including a subscription to the ANNALS of MATHEMATICAL STATISTICS are \$20.00 per year for residents of the United States or Canada and \$12.00 per year for residents of other countries. Special student rates of \$10.00 per year are available to students residing in the U.S. and Canada. Inquiries regarding membership in the Institute should be sent to the Treasurer of the Institute.

Membership in the Institute of Mathematical Statistics is not required of authors of papers in the *Annals of Mathematical Statistics* and the fact of membership or non-membership is given on weight in the consideration of submitted manuscripts.

Contents (Continued)

Phase free estimation of coherence.....	RICHARD H. JONES	540
One sided problems in multivariate analysis.....	MICHAEL D. PERLMAN	549
The consistency of certain sequential estimators.....	R. M. LOYNES	568
Optimal two-stage stratified sampling.....	M. H. DE GROOT AND N. STARR	575
Asymptotic distribution of maximum likelihood estimators in a linear model with autoregressive disturbances.....	CLIFFORD HILDRETH	583
A note on tests for monotone failure rate based on incomplete data	R. E. BARLOW AND F. PROSCHAN	595
The remainder in the central limit theorem for mixing stochastic processes	WALTER PHILIPP	601
Analysis of covariance based on general rank scores	MADAN LAL PURI AND PRANAB KUMAR SEN	610
Multiple decision procedures based on ranks for certain problems in analysis of variances.....	MADAN L. PURI AND PREM S. PURI	619
Asymptotic properties of non-linear least squares estimators	ROBERT I. JENNRICH	633
Notes		
The expected coverage to the left of the i th order statistic for arbitrary distributions.....	BARRY H. MARGOLIN AND FREDERICK MOSTELLER	644
Some first passage problems for $S_n/n^{\frac{1}{2}}$	R. A. OLSHEN AND D. O. SIEGMUND	648
A note on sequential multiple decision procedures.....	ISAAC MEILIJSON	653
On a class of conditionally distribution-free tests for interactions in factorial experiments.....	K. L. MEHRA AND P. K. SEN	658
The asymptotic behavior of a certain Markov chain.....	B. J. MC CABE	665
An extension of a theorem of Chow and Robbins on sequential confidence intervals for the mean.....	ARTHUR NÁDAS	667
Admissibility and Bayes estimation in sampling finite populations—V	V. P. GODAMBE	672
An optimal stopping theorem.....	BENTON JAMISON AND STEVEN OREY	677
A note on balanced incomplete block designs.....	HENRY B. MANN	679
Inequalities with applications to the weak convergence of random processes with multi-dimensional time parameters.....	MICHAEL J. WICHURA	681
On a fluctuation theorem for processes with independent increments II	C. C. HEYDE	688
Note on a 'multivariate' form of Bonferroni's inequalities..	RICHARD M. MEYER	692
Note on shift-invariant sets.....	U. KRENGEL AND L. SUCHESTON	694
Properties of power functions of some tests concerning dispersion matrices of multivariate normal distributions.....	SOMESH DAS GUPTA	697
The sampling distribution of an estimator arising in connection with the truncated exponential distribution.....	JAN M. HOEM	702
A general method of determining fixed-width confidence intervals	RASUL A. KHAN	704
On minimum variance unbiased estimation of reliability	Y. S. SATHE AND S. D. VARDE	710
The existence of certain stopping times on Brownian motion.....	D. H. ROOT	715

MEETINGS OF THE INSTITUTE

ANNUAL MEETING—New York, New York, August 19-22, 1969
Laramie, Wyoming, late August, 1970
EASTERN REGIONAL—Chapel Hill, North Carolina, Spring, 1970
CENTRAL REGIONAL—Dallas, Texas, Spring, 1970
WESTERN REGIONAL—Monterey, California, May 7-9, 1969
