
STATISTICAL THEORY AND METHOD ABSTRACTS

A Journal of the International Statistical Institute

The object of this abstracting service is to cover published papers concerned with statistical theory, including relevant aspects of probability and mathematical methods, and new contributions to statistical method. These abstracts provide valuable information on new developments for studying problems in many fields: such as frequency distributions, estimating and testing problems, sampling and experimental designs, variance analysis, spectral theory and other methods in time-series analysis, queueing theory, reliability and acceptance inspection. Journals appearing in all parts of the world, on mathematics and statistics, or on other fields and possible contribution of interest are regularly scanned for suitable papers. Abstracts are also prepared from collections of papers such as reports of conferences, symposia and seminars: technical reports of experiment and research stations are covered.

The abstracts do not exceed 400 words, with occasional "double abstracts" for papers where this size is not sufficient to represent the paper. The language is English; the language of the original paper is indicated. The headings give the name and address of the author together with the Journal in which the paper is published moreover a note is added on the number of references, tables and figures.

The classification scheme which is used in this Journal supplies a division of all abstracts in twelve main sections. The pages of the Journal are colour-tinted in accordance with these main sections. Each section is further sub-divided to indicate the main topic of the paper; a secondary number denotes the most important additional topic referred to by the author. A special index in each part links together these two classifications. This scheme is arranged to facilitate transfer to punch cards. Papers containing new statistical tables are listed in a separate index.

The abstracts are numbered serially, the volume number being inserted as a prefix. The Journal is published four times a year and contains approximately 1,000 abstracts. An author index, the secondary classification index and the new statistical tables index are published in issue and combined in a yearly supplement which also contains a list of all Journals represented in the volume by one or more abstracts.

<i>Annual Subscription</i>	£7. 10s. (U.S.A. \$24.00)
<i>Single Number</i>	£2. 5s. (U.S.A. \$ 7.00)
<i>Loose Leaf Binders for Single Abstract Sheets</i>	16s. 3d. including postage and packing.

The Indian Journal of Statistics

CONTENTS OF SERIES A, VOL. 29, PART 4, DECEMBER 1967

Nonparametric tests for multivariate interchangeability. Part 1: Problems of location and scale in bivariate distributions	Pranab Kumar Sen
Estimation of a probability density function and its derivatives	P. K. Bhattacharya
On non-dissipative Markov chains	Paul T. Holmes
Analysis of variance for Scheffe's mixed model for stair-case design	R. P. Bhargava
Some characterizations of normality	Theophilos Cacoullos
Type III distribution and its stochastic evolution in the context of distributions of income, land-holdings and their economic variables	V. Mukerji
Minimax unbiased estimator of mixing distribution for finite mixture	D. C. Boes
The infinite divisibility of a bivariate gamma distribution	D. Vere-Jones
Book Reviews	
Abstracts of Technical Reports	

Orders for the Journal for distribution outside India are to be sent to:

Pergamon Press Ltd., Headington Hill Hall, Oxford, England	or Pergamon Press Inc., 122 East 57th Street, New York 22, USA

BOOK REVIEWS
NOTICES

The purpose of TECHNOMETRICS is to contribute to the development and use of statistical methods in the physical, chemical and engineering sciences. This objective places a high premium on succinct communication among the physical scientist, engineer, statistician and mathematician. The journal will accept for publication papers describing new statistical techniques expected to be useful in these sciences, papers illustrating the application of known statistical methods to new or novel environments, expository or tutorial papers on particular statistical methods, and papers dealing with the philosophy and problems of applying statistical methods to research, development, design and performance. Brief descriptions of problems requiring solution and short technical notes will also be accepted for publication.
For further information please contact TECHNOMETRICS Post Office Box 587 Benjamin Franklin Station Washington, D. C. 20004.

THE INSTITUTE OF MATHEMATICAL STATISTICS

(Organized September 12, 1935)

OFFICERS

President:

Herman Chernoff, Department of Statistics, Stanford University, Stanford, California 94305

President-Elect:

Wassily Hoeffding, Department of Statistics, University of North Carolina, Chapel Hill, North Carolina 27514

Executive Secretary:

Leo Katz, Statistical Laboratory, Michigan State University, East Lansing, Michigan 48823

Program Secretary:

Joan Raup Rosenblatt, National Bureau of Standards, Washington, D.C. 20234

Treasurer:

George J. Resnikoff, Department of Statistics, California State College, Hayward, California 94542

Editor:

Z. W. Birnbaum, Department of Mathematics, University of Washington, Seattle, Washington 98105

Managing Editor:

Paul L. Meyer, Department of Mathematics, Washington State University, Pullman, Washington 99163

The purpose of the Institute of Mathematical Statistics is to encourage the development, dissemination, and application of mathematical statistics.

Membership dues including a subscription to the ANNALS of MATHEMATICAL STATISTICS are \$20.00 per year for residents of the United States or Canada and \$12.00 per year for residents of other countries. Special student rates of \$10.00 per year are available to students residing in the U.S. and Canada. Inquiries regarding membership in the Institute should be sent to the Treasurer of the Institute.

Membership in the Institute of Mathematical Statistics is not required of authors of papers in the *Annals of Mathematical Statistics*, and the fact of membership or non-membership is given no weight in the consideration of submitted manuscripts.

Contents (Continued)

The calculation of distributions of Kolmogorov-Smirnov type statistics including a table of significance points for a particular case	MARC NOÉ AND GEORGES VANDEWIELE 233
A tree counting problem	J. W. MOON 242
Construction of the set of 256-run designs of resolution ≥ 5 and the set of even 512-run designs of resolution ≥ 6 with special reference to the unique saturated designs	NORMAN R. DRAPER AND TOBY J. MITCHELL 246
Notes	
Estimating the total probability of the unobserved outcomes of an experiment	HERBERT E. ROBBINS 256
Some invariant laws related to the arc sine law	J. P. IMHOF 258
A note on the absence of tangencies in Gaussian sample paths	DONALD YLVISAKER 261
An elementary proof of asymptotic normality of linear functions of order statistics	D. S. MOORE 263
The asymptotic error of iterations	PETER FRANK 266
A note on stochastic difference equations	K. S. MILLER 270
Recurrence relations between moments of order statistics for exchangeable variates	H. A. DAVID AND P. C. JOSHI 272
On tests of the equality of two covariance matrices	N. GIRI 275
Note on a minimax design for cluster sampling	V. M. JOSHI 278
On a further robustness property of the test and estimator based on Wilcoxon's signed rank statistic	PRANAB KUMAR SEN 282
Construction of sequences estimating the mixing distribution	J. J. DEELY AND R. L. KRUSE 286
Correction Note	289
Book Reviews	
HARALD CRAMÉR AND M. R. LEADBETTER: <i>Stationary and Related Stochastic Processes/Sample Function Properties and Their Applications</i>	DONALD YLVISAKER 290
D. N. LAWLEY AND A. E. MAXWELL: <i>Factor Analysis as a Statistical Method</i>	HERMAN RUBIN 292
WINIFRED D. ASHTON: <i>Theory of Road Traffic Flow</i>	PETER C. C. WANG 293
Abstracts of Papers	294
News and Notices	313
Report of the President	317
Report of the Editor	318
Report of the Treasurer	319
Report of the Program Secretary	321
Report of the Managing Editor	322
Publications Received	322

MEETINGS OF THE INSTITUTE

CENTRAL REGIONAL - East Lansing, Michigan, March 18-20, 1968
EASTERN REGIONAL - Blacksburg, Virginia, April 8-10, 1968
ANNUAL MEETING - Madison, Wisconsin, August 26-30, 1968

Abstracts should be submitted in duplicate to the Managing Editor, P. L. Meyer, Department of Mathematics, Washington State University, Pullman, Washington, on abstract blanks which may be obtained from him or from any Secretary or Associate Secretary. Abstracts must be received at least 50 days before the first day of the meeting at which they are to be presented, indicating whether presented by title or in person. (Only one contributed paper may be given in person at any one meeting.) They may be printed prior to the publication of the report of the meeting. Ordinarily, each issue will contain those abstracts received at least 75 days before it appears. Abstracts should be limited to 200 words or the equivalent and should avoid displayed expressions and complicated formulae. They can be accepted from non-members of the IMS only if introduced by members. Abstracts must follow the stylistic requests on the abstract blank, or they may be returned.
