BULLETIN
de l'Academie Polonaise des Sciences

Series on the Mathematical, Astronomical and Physical Sciences

A MONTHLY REVIEW

K. KUROWSKI
Editor-in-Chief

L. INFELD
Deputy Editor-in-Chief

A. MOSTKOWSKI
Editor of the Series

In this Series, the Bulletin (official organ of the l'Academie Polonaise des Sciences) covers previously unpublished research results on the mathematical, astronomical and physical sciences. These original papers, presented by members of the Academy, including foreign members, are published in English, French, German or Russian, in accordance with the author's choice. The Bulletin is available on a subscription basis or by an exchange* with similar publications.

Annual subscription — $8.00 **Single copy — $.75**

Order from:

RUCH,

MATHEMATICIANS
MATHEMATICAL STATISTICIANS
Exciting New Projects in
COMPUTER RESEARCH AND TECHNOLOGY at NIH

A number of exceptional new career opportunities await mathematicians and mathematical statisticians in the new Division of Computer Research and Technology of the National Institutes of Health.

MATHEMATICIANS are sought to develop mathematical methods for application to problems in heart research, lung mechanics and neuro-surgery. They will also participate in developing special computer software for biomedical application (e.g., automated laboratories, biochemical kinetics and pattern recognition in neurology). PhD is required for project leader positions and is preferred for all others.

MATHEMATICAL STATISTICIANS are offered opportunity to develop new statistical methods for application to clinical medicine and time-dependent laboratory and clinical measurements. Also involved are the development of random number generators and multivariate techniques. PhD is preferred for these positions.

Other mathematics-related positions are offered to OPERATIONS RESEARCH ANALYSTS, who will develop mathematical models of management information processes and hospital appointment scheduling. Requires BS in mathematical statistics and related experience. Also, SYSTEMS ANALYSTS and PROGRAMMERS with mathematics/statistics degrees and large-system computer software experience will find a variety of attractive and technically stimulating opportunities.

We urge your consideration of these positions, which offer not only the opportunity to participate in a uniquely significant and timely activity with humanitarian objectives, but the liberal and comprehensive benefits of Federal employment and the chance to work with today's most modern computing and ancillary equipment. Please send your resume or Standard Form 57 (application for Federal employment) to: Chief, Division of Computer Research and Technology, Building 12-A, Room 2017-4.

STATISTICAL THEORY AND METHOD ABSTRACTS

A Journal of the International Statistical Institute

The object of this abstracting service is to cover published papers concerned with statistical theory, including relevant aspects of probability and mathematical methods, and new contributions to statistical method. These abstracts provide valuable information on new developments for studying problems in many fields; for example, reliability, quality control, experiments, surveys, queueing, congestion and forecasting. Approximately 500 journals are scanned for suitable papers. Abstracts are also prepared from collections of papers such as reports of conferences, symposia and seminars: technical reports of experiment and research stations are covered.

Approximately 400 words long, these literary informative abstracts are written in English; the language of the original paper is indicated. The heading not only gives the name and address of the author together with the journal in which the paper was published, but a note is given of references, tables, etc.

The revised classification scheme consists of three parts. The pages of the journal are colour-tinted in groups to provide visual indication of twelve main sections. Each section is further sub-divided to indicate the main topic of the paper; a secondary number denotes the most important additional topic referred to by the author. A special table in each part links together these two classifications. This scheme is arranged to facilitate transfer to punch cards. When papers are concerned with new statistical tables the relevant classification for the Greenwood/Hartley Guide (1962) is indicated in a special section.

The abstracts are numbered serially, the volume number being inserted as a prefix. The journal is published four times a year and contains approximately 1,250 abstracts. Relevant indexes are published in each issue and combined in a yearly supplement.

Annual Subscription	£7.10s. (U. S. A. $24.00)
Single Number	£2.5s. (U. S. A. $4.00)
Loose Leaf Binders for Single Abstract Sheets	16s.3d including postage and packing.

JOURNAL OF THE AMERICAN STATISTICAL ASSOCIATION

Volume 61 March 1966 Number 313

Presidential Address ..... *W. Allen Wallis*
Some Aspects of Experimental Inference ..... *Oscar Kempthorne*
Recognizing the Maximum of a Sequence ..... *Frederick Mosteller and John Gilbert*
Stratification: A Practical Investigation ..... *Irene Hess, V. K. Sethi and T. R. Balakrishnan*
The Reliability of Consumer Surveys of Financial Holdings: Demand Deposits ..... *Robert Ferber*
The Relative Efficacy of Investment Anticipations ..... *Michael K. Evans and Edward W. Green*
Labor Force Entry and Attachment of Young People ..... *John Korbel*
A Note on an 'Errors in Variables' Model ..... *Anthony Lancaster*
On the Sensitivity of Simultaneous Equations Estimators to the Stochastic Assumptions of the Models ..... *J. G. Cragg*
Time Series Analysis by Modified Least-Squares Techniques ..... *Richard Duvall*
Inequality Restrictions in Regression Analysis ..... *George G. Judge and T. Takayama*
Confidence Bands of Uniform and Proportional Width for Linear Models ..... *Franklin A. Graybill and David C. Bowen*
A Numerical Procedure to Venerate A Sample Covariance Matrix ..... *Patrick L. Odell and A. H. Feiveson*
Critical Regions for Tests of Interval Hypotheses About the Variance ..... *William C. Guenther and Mary G. Whitcomb*
Estimator with Prescribed Bound on the Variance for the Parameters in the Binomial and Poisson Distributions Based on Two-Stage Sampling ..... *Ester Samuel*
A Note on the Equivalence of Two Test Criteria for Hypotheses in Categorical Data ..... *V. P. Bhapkar*
Lamp Tests of Linear and Loglinear Hypotheses in Multinomial Experiments ..... *S. R. Kulkarni and B. R. Bhat*
Bias of The One-Sample Cramer-von Mises Test ..... *Rory Thompson*
Best Linear Estimates under Symmetric Censoring of the Parameters of a Double Exponential Population ..... *Z. Govindarajulu*
On Estimating the Parameter of a Doubly Truncated Binomial Distribution ..... *S. M. Shah*

JOURNAL OF THE
ROYAL STATISTICAL SOCIETY

THE JOURNAL OF THE ROYAL STATISTICAL SOCIETY is published in three series, SERIES A (GENERAL), four issues a year, annual subscription, post free, £5 4s. U. S. $15: price each part 30s: SERIES B (METHODOLOGICAL), three issues a year, annual subscription post free, £4 2s. U. S. $12: price each part 35s: SERIES C (APPLIED STATISTICS), three issues a year, annual subscription 30s.; U. S. $5, price each part 15s.

Reviews; Current Notes; Library Accessions

Contents of SERIES A (GENERAL), Vol. 129, PART 1 1966

The National Plan. A discussion opened by W. BECKERMAN AND K. J. WIGLEY
The design of investigations into the effects of radio and television programmes and other mass communications (with Discussion) B. P. EMMETT
A binary variable multiple regression method of analysing factors affecting peri-natal mortality and other outcomes of pregnancy M. S. FELDSTEIN
A measure of a firm's average share price R. MARRIS AND A. SINGH
The measurement of observer disagreement in the recording of signs P. ARMITAGE, L. M. BLENDIS AND H. C. SMYLLIE
Monte Carlo results for estimation in a stable Markov time series J. B. COPAS
Obituary: Corrado Gini
Reviews; Current Notes; Library Accessions

Contents of SERIES B (METHODOLOGICAL), Vol. 28, PART 1 1966

On allocation rules and their error rates (with Discussion) M. HILLS
Estimation by ranking parameters J. A. HARTIGAN
On efficient multinomial estimation B. R. BHAT & N. V. KULKARNI
On a fiducial example of C. Stein R. S. PINKHAM
Note on the confidence-prior of Welch & Peers J. A. HARTIGAN
Expected cover and linear-utility tolerance intervals J. AITCHISON
Sequential compound rules for the finite decision problem E. SAMUEL
Asymptotic sequential design of experiments with two random variables L. R. ABRAMSON
An experimental study of certain screening processes D. J. FINNEY
The analysis of variance of designs with many non-orthogonal classifications D. H. REES
Classifying Youden rectangles D. A. PREECE
A general class of coefficients of divergence of one distribution from another S. M. ALI AND S. D. SILVEY

Contents of APPLIED STATISTICS (SERIES C), VOL. 14, PARTS 2 & 3, 1965

Characterization theorems for some univariate probability distributions M. V. MENON
A note on the asymptotic efficiency of Bennett's bivariate sign test G. K. BHATTACHARYYA
The chi-square test for heterogeneity of proportions after adjustment for stratification. P. ARMITAGE
Alternative analyses of contingency tables J. J. GART
A test for "intrinsic" correlation in the theory of accident proneness K. SUBRAHMANIAM
The ergodic queue length distribution for queuing systems with finite capacity J. KEILSON
Delay at traffic intersections A. G. HAWKES
Corrections and comments on the paper "A branching process allowing immigration" C. R. HEATHCOTE
On streams of events and mixtures of streams M. R. LEADBETTER
Design relations for non-stationary processes M. B. PRIESTLEY
Experimental smoothing for multivariate time series R. H. JONES
Errata—Consistency in statistical inference and decision 1961. C. A. B. SMITH

TECHNOMETRICS

A Journal of Statistics for the Physical, Chemical and Engineering Sciences

CONTENTS

TECHNOMETRICS, Vol. 8, No. 2, MAY 1966

Sequential Life Tests for the Exponential Distribution with Changing Parameter ..... *Leo A. Aroian and D. E. Robison*
Analysis of Data When the Response is a Curve ..... *Alonzo Church, Jr.*
Statistical Properties of a Certain Periodic Binary Process ..... *Arthur Wouk*
Factorial 2^{p-q} Plans Robust Against Linear and Quadratic Trends ..... *Cuthbert Daniel and Frank Wilcoxon*
The Orthogonalization of Undesigned Experiments ..... *Otto Dykstra, Jr.*
Confidence Intervals from Censored Samples, II ..... *Max Halperin*
Paths and Chains of Random Straight-Line Segments ..... *Norman L. Johnson*
Simultaneous Nonlinear Estimation ..... *John J. Beauchamp and Richard G. Cornell*
A Coefficient Measuring the Goodness of Fit ..... *H. Weiler*
Producer and Consumer Risks in Non-normal Population ..... *H. R. Singh*

NOTES:

Approximating the Negative Binomial ..... *John J. Bartko*
Applications of the Pseudoinverse to Modeling ..... *W. A. Harris, Jr. and T. N. Helvig*
Approximation to the Cumulative *t*-Distribution ..... *Clyde Y. Kramer*
Least Squares Estimation of the Components of a Symmetric Matrix ..... *Harold J. Larson*
Comments to: Edward C. Posner, "The Application of Extreme Value Theory to Error Free Communication" ..... *E. J. Gumbel and C. K. Mustafi*

QUERIES:

Confidence Interval for Standard Deviation From a Single Observation ..... *Answered by Judah Rocenblatt*
Joint Confidence Limits for Ranked Observations ..... *Answered by H. O. Hartley and A. W. Wortham*

BOOK REVIEWS

NOTICES

The purpose of TECHNOMETRICS is to contribute to the development and use of statistical methods in the physical, chemical and engineering sciences. This objective places a high premium on succinct communication among the physical scientist, engineer, statistician and mathematician. The journal will accept for publication papers describing new statistical techniques expected to be useful in these sciences, papers illustrating the application of known statistical methods to new or novel environments, expository or tutorial papers on particular statistical methods, and papers dealing with the philosophy and problems of applying statistical methods to research, development, design and performance. Brief descriptions of problems requiring solution and short technical notes will also be accepted for publication.

For further information please contact TECHNOMETRICS Post Office Box 587 Benjamin Franklin Station Washington 4, D. C.

SANKHYĀ

The Indian Journal of Statistics

CONTENTS OF SERIES A, VOL. 27, PARTS 2, 3 & 4, 1966

Prediction theory of non-stationery processes ..... Chandrakant Mahadeorao Deo
Asymptotically single observation best estimator of exponential expected life ..... Satya D. Dubey
Normal approximations to the classical discrete distribution ..... Zakkula Govindarajulu
Partial triallel crosses ..... Klaus Hinkelmann
The weakly contagious discrete stochastic process ..... Tosio Kitagawa
Stochastic theory of biological and economic configurations ..... Jaroslav Kožešnik
Characterization problems for discrete distributions ..... Eugene Lukacs
Dynamic programming for countable state systems ..... Ashok Maitra
Certain chance mechanisms involving discrete distributions ..... Jerzy Neyman
Certain characteristic properties of multivariate discrete probability distributions akin to the Bates-Neyman model in the theory of accident proneness ..... G. P. Patil
On certain structural properties of the logarithmic series distribution and the first type stirling distribution ..... G. P. Patil and J. K. Wani
Maximum likelihood estimation for the complete and truncated logarithmic series distributions ..... G. P. Patil and J. K. Wani
On linear operators leaving a covex set invariant in Banach spaces ..... T. E. S. Raghavan
An extension of a theorem of Mamay, with application ..... B. Ramachandran
On discrete distributions arising out of methods of ascertainment ..... C. Radhakrishna Rao
Probabilities of moderate deviations ..... Herman Rubin and J. Sethuraman
Bayes risk efficiency ..... Herman Rubin and J. Sethuraman
On a characterisation of the three limiting types of the extreme ..... J. Sethuraman
Some comments on the question of identifiability of parameters raised by Rao ..... D. A. Sprott
A Class of contagious distributions and maximum likelihood estimation ..... D. A. Sprott
Application of the calculus for factorial arrangement. III. Analysis of factorials with unequal numbers of observations ..... M. Zelen and W. T. Federer

NOTES

A contribution to the theory of finite oriented graphs ..... Ram Prakash Gupta
On a characterization of the normal law based on a property of the sample average ..... A. M. Kagan, Yu. V. Linnik and C. Radhakrishna Rao
A note on a minimum theory of T. T. Tie ..... T. Parthasarathy
Non-linear spaces in the construction of symmetric PBIB designs ..... C. Ramanujacharyulu
An elementary concentration inequality ..... Herman Rubin
Characterization of the asymptotic distributions of a transformed normal random variable ..... Norman C. Severo, Lloyd J. Montzingo and Paul J. Schillo
On the maximum of stationary Gaussian sequence ..... Henry Teicher

THE INSTITUTE OF MATHEMATICAL STATISTICS

(Organized September 12, 1935)

OFFICERS

President:

Herbert E. Robbins, Department of Mathematical Statistics, Columbia University, New York, N.Y. 10027

President-Elect:

Theodore E. Harris, Department of Mathematics, University of Southern California, Los Angeles, California 90007

Executive Secretary:

G. E. Nicholson, Jr., Department of Statistics, University of North Carolina, Chapel Hill, North Carolina 27515

Program Secretary:

Joan Raup Rosenblatt, National Bureau of Standards, Washington, D.C. 20234

Treasurer:

George J. Resnikoff, Department of Statistics, California State College, Hayward, California 94542

Editor:

D. L. Burkholder, Department of Mathematics, University of Illinois, Urbana, Illinois 61803

The purpose of the Institute of Mathematical Statistics is to encourage the development, dissemination, and application of mathematical statistics.

Membership dues including a subscription to the ANNALS of MATHEMATICAL STATISTICS are $20.00 per year for residents of the United States or Canada and $12.00 per year for residents of other countries. Special student rates of $10.00 per year are available to students residing in the U.S. and Canada. Inquiries regarding membership in the Institute should be sent to the Treasurer of the Institute.

Membership in the Institute of Mathematical Statistics is not required of authors of papers in the *Annals of Mathematical Statistics*, and the fact of membership or non-membership is given no weight in the consideration of submitted manuscripts.

Contents (Continued)

Notes

A simple solution for optimal Chebyshev regression extrapolation ... PAUL G. HOEL 720

Remark on the optimum character of the sequential probability ratio test ... J. WOLFOWITZ 726

A note on upcrossings of semimartingales ... LESTER E. DUBINS 728

A note on invariant measures ... N. C. JAIN 729

A note on recurrence relations between expected values of functions of order statistics ... P. R. KRISHNAIAH AND M. HASEEB RIZVI 733

An asymptotically distribution-free multiple comparison procedure-treatment vs. control ... MYLES HOLLANDER 735

Comparison of the bounds of the number of common treatments between blocks of certain partially balanced incomplete block designs ... HIRA LAL AGRAWAL 739

Sequential counterbalancing in Latin squares ... TOM R. HOUSTON 741

Invariance of maximum likelihood estimations ... PETER W. ZEHNA 744

Correction Notes ... 745

Book Reviews

MEETINGS OF THE INSTITUTE

TENTATIVE SCHEDULE

WESTERN REGIONAL - Los Angeles, California - August 15–17, 1966.

ANNUAL MEETING - New Brunswick, New Jersey - August 30–September 2, 1966.

EUROPEAN REGIONAL - London, England - September 5–10, 1966.

Abstracts should be submitted in duplicate to the Managing Editor, P. L. Meyer, Department of Mathematics, Washington State University, Pullman, Washington, on abstract blanks which may be obtained from him or from any Secretary or Associate Secretary. Abstracts must be received at least 50 days before the first day of the meeting at which they are to be presented, indicating whether presented by title or in person. (Only one contributed paper may be given in person at any one meeting.) They may be printed prior to the publication of the report of the meeting. Ordinarily, each issue will contain those abstracts received at least 75 days before it appears. Abstracts should be limited to 200 words or the equivalent and should avoid displayed expressions and complicated formulae. They can be accepted from non-members of the IMS only if introduced by members. Abstracts must follow the stylistic requests on the abstract blank, or they may be returned.
