

From the HOLDEN-DAY Library of Pure and Applied Science

Probability and Statistics in Psychological Research and Theory by *Donald Stilson*, University of Colorado

Assuming no mathematics beyond college algebra, this text covers numerous non-trivial applications of both probability and statistics to psychological theory, including a few applications of interest to clinical psychologists. It provides particularly important training in the use of statistical terms that permits the student to communicate with mathematical statisticians. Gives an excellent grounding in the fundamentals of probability and statistics for senior-graduate students of psychology. \$11.95

Stochastic Processes by *Emanuel Parzen*, Stanford University

Provides an invaluable understanding of the use of stochastic processes for readers possessing a background of elementary calculus and some knowledge of the concepts of continuous probability theory. The book contains examples of a wide variety of empirical phenomena for which stochastic processes provide mathematical models, and introduces the methods of probability model building, emphasizing applications of stochastic processes. \$10.95

Mathematical Foundations of the Calculus of Probability by *Jacques Neveu*, Faculté des Sciences de Paris; trans. by *Amiel Feinstein*

Develops the mathematical foundations of the theory of random processes to the point where the reader should have no difficulty in further pursuing the subject in any direction he chooses. The book would serve admirably for a course in advanced probability theory, as a textbook for a high-level course on measure theory, and as a self-study course for anyone who has had an elementary course in probability theory. \$7.95

STATISTICAL THEORY AND METHOD ABSTRACTS

A Journal of the International Statistical Institute

The object of this abstracting service is to cover published papers concerned with statistical theory, including relevant aspects of probability and mathematical methods, and new contributions to statistical method. These abstracts provide valuable information on new developments for studying problems in many fields; for example, reliability, quality control, experiments, surveys, queueing, congestion and forecasting. Approximately 500 journals are scanned for suitable papers. Abstracts are also prepared from collections of papers such as reports of conferences, symposia and seminars: technical reports of experiment and research stations are covered.

Approximately 400 words long, these literary informative abstracts are written in English; the language of the original paper is indicated. The heading not only gives the name and address of the author together with the journal in which the paper was published, but a note is given of references, tables, etc.

The revised classification scheme consists of three parts. The pages of the journal are colour-tinted in groups to provide visual indication of twelve main sections. Each section is further sub-divided to indicate the main topic of the paper; a secondary number denotes the most important additional topic referred to by the author. A special table in each part links together these two classifications. This scheme is arranged to facilitate transfer to punch cards. When papers are concerned with new statistical tables the relevant classification for the Greenwood/Hartley Guide (1962) is indicated in a special section.

The abstracts are numbered serially, the volume number being inserted as a prefix. The journal is published four times a year and contains approximately 1,250 abstracts. Relevant indexes are published in each issue and combined in a yearly supplement.

<i>Annual Subscription</i>	£7.10s. (U. S. A. \$24.00)
<i>Single Number</i>	£2.5s. (U. S. A. \$4.00)
<i>Loose Leaf Binders for Single Abstract Sheets</i>	16s.3d including postage and packing.

SANKHYĀ

The Indian Journal of Statistics

CONTENTS OF SERIES A, VOL. 26, PARTS 2, 3, & 4, 1964

Analysis of irregular factorial fractions.....	R. C. Bose and J. N. Srivastava
Multidimensional partially balanced designs and their analysis with applications to partially balanced factorial fractions.....	R. C. Bose and J. N. Srivastava
Effect of non-normality on plans for sampling inspection by variables.....	Nani Gopal Das and Sujit Kumar Mitra
Parametric solution and programming of the Hicksian model.....	Ragnar Frisch assisted by Ashok K. Parikh
Elements of a theory of system behaviour.....	Oskar Lange
On the expected correlograms of first and second order autoregressive schemes.....	Sukumar Mukerjee
The non-existence of some partially balanced incomplete block designs with three associate classes.....	N. K. Singh and K. N. Singh
Models for demand projections.....	Richard Stone
Limiting distribution of some statistics in multivariate analysis of variance.....	O. P. Bagai
On the limiting distribution of some statistics proposed for tests of hypotheses.....	P. C. Consul
Reliability density functions when the failure rate is randomly distributed.....	Frank McNolty
On certain compound Poisson and compound binomial distributions.....	G. P. Patil
On a characterization of the Poisson distribution.....	C. Radhakrishna Rao and Herman Rubin
On accessibility in graphs.....	K. Vijayan and U. S. R. Murty
A note on maximum likelihood.....	G. S. Watson
Tables of finite fields.....	J. D. Alanen and Donald E. Knuth
The use and interpretation of principal component analysis in applied research.....	C. Radhakrishna Rao
Smooth regression analysis.....	Geoffrey S. Watson
Further properties of a sequential test of fit.....	Lionel Weiss
A quadratic programming procedure with special reference to the problem of selection with restrictions.....	R. Jagannathan
On the block structure of PBIB designs with two associate classes.....	V. N. Murty
Corrections for smoothing.....	Geoffrey S. Watson

The subscription price per volume for each of the series separately is: Outside India: \$20.00; £7. In India: Rs. 30.00. The subscription price per volume for both the series taken together is: Outside India: \$30.00; £10. In India: Rs. 50.00.

Orders for the Journal for distribution outside India are to be sent to:

Pergamon Press Ltd.,
Headington Hill Hall,
Oxford, England

or
Pergamon Press Inc.,
122 East 57th Street,
New York 22, USA

Orders for the Journal for distribution within India are to be sent to:

Statistical Publishing Society,
204/1 Barrackpore Trunk Road,
Calcutta-35, India

TECHNOMETRICS

A Journal of Statistics for the Physical, Chemical and Engineering Sciences

CONTENTS

TECHNOMETRICS, Vol. 7, No. 3, AUGUST 1965

Statistical Process Control and the Impact of Automatic Process Control.....	Gerald J. Lieberman
Tables for a Treatments Versus Control Multiple Comparisons Sign Test.....	A. L. Rhyne and Robert G. D. Steel
Designs for Discriminating between Two Rival Models.....	William G. Hunter and Albey M. Reiner
Choice of Levels of Polynomial Regression with One or Two Variables.....	Dr. Virginia Clark
The Use of Incomplete Beta Functions for Prior Distributions in Binomial Sampling.....	H. Weiler
Parameter Estimation for a Generalized Gamma Distribution.....	E. W. Stacy and G. A. Migram
On Precedence Life Testing.....	Joan Eilbott and Jack Nadler
Some Statistical Characteristics of a Peak to Average Ratio.....	Milton Morrison and Filbert Tobias
Approximate Design of Digital Filters.....	H. H. Robertson
Point and Interval Estimators, Based on m -order Statistics, for the Scale Parameter of a Weibull Population with Known Shape Parameter.....	H. Leon Harter and Albert H. Moore
Estimation of Power Spectra by a Wave Analyser.....	Maurice Priestley and C. H. Gibson
Asymptotic Properties of Several Estimators of Weibull Parameters.....	Satya D. Dubey

NOTES:

Note on an Application of Four-Moment Inequalities to a Problem in Queues.....	Henry DeCicco
Construction of a 2^{17-9} resolution V plan in eight blocks of 32.....	Sidney Adelman
A Note on G. S. Watson's Paper "A Study of the Group Screening Method".....	R. N. Curnow

QUERIES:

Testing Two Correlated Variances.....	Answered by William G. Cochran
Combination of a Normal and a Uniform Distribution.....	Answered by Paul Gunther

BOOK REVIEWS

NOTICES AND ERRATA

The purpose of TECHNOMETRICS is to contribute to the development and use of statistical methods in the physical, chemical and engineering sciences. This objective places a high premium on succinct communication among the physical scientist, engineer, statistician and mathematician. The journal will accept for publication papers describing new statistical techniques expected to be useful in these sciences, papers illustrating the application of known statistical methods to new or novel environments, expository or tutorial papers on particular statistical methods, and papers dealing with the philosophy and problems of applying statistical methods to research, development, design and performance. Brief descriptions of problems requiring solution and short technical notes will also be accepted for publication.

For further information please contact TECHNOMETRICS Post Office Box 587 Benjamin Franklin Station Washington 4, D. C.

THE INSTITUTE OF MATHEMATICAL STATISTICS

(Organized September 12, 1935)

OFFICERS

President:

Herbert Solomon, Department of Statistics, Stanford University, Stanford, California 94305

President-Elect:

Herbert E. Robbins, Department of Mathematical Statistics, Columbia University, New York, N.Y. 10027

Executive Secretary:

G. E. Nicholson, Jr., Department of Statistics, University of North Carolina, Chapel Hill, North Carolina 27515

Program Secretary:

Joan Raup Rosenblatt, National Bureau of Standards, Washington, D.C. 20234

Treasurer:

George J. Resnikoff, Department of Statistics, California State College, Hayward, California 94542

Editor:

D. L. Burkholder, Department of Mathematics, University of Illinois, Urbana, Illinois 61803

The purpose of the Institute of Mathematical Statistics is to encourage the development, dissemination, and application of mathematical statistics.

Membership dues including a subscription to the ANNALS OF MATHEMATICAL STATISTICS are \$15.00 per year for residents of the United States or Canada and \$7.00 per year for residents of other countries. There are special rates for students and for some other classes of members. Inquiries regarding membership in the Institute should be sent to the Treasurer of the Institute.

Membership in the Institute of Mathematical Statistics is not required of authors of papers in the *Annals of Mathematical Statistics*, and the fact of membership or non-membership is given no weight in the consideration of submitted manuscripts.

Contents (Continued)

On the Efficiency of the Normal Scores Test Relative to the F-Test	M. RAGHAVACHARI	1306
A Note on Wilks' Internal Scatter	H. ROBERT VAN DER VAART	1308
Pairwise Statistical Independence	H. O. LANCASTER	1313
Correction Notes		1318
Book Review		
FRANK SPITZER: Principles of Random Walk	D. A. DARLING	1319
Abstracts of Papers		1321
News and Notices		1330
Report of the Lincoln, Nebraska Meeting		1331
Report of the Tallahassee, Florida Meeting		1333
Publications Received		1338

MEETINGS OF THE INSTITUTE

TENTATIVE SCHEDULE

ANNUAL MEETING—Philadelphia, Pennsylvania—September 8-11, 1965.

Abstracts should be submitted in duplicate to the Managing Editor, P. L. Meyer, Department of Mathematics, Washington State University, Pullman, Washington, on abstract blanks which may be obtained from him or from any Secretary or Associate Secretary. Abstracts must be received at least 50 days before the first day of the meeting at which they are to be presented, indicating whether presented by title or in person. (Only one contributed paper may be given in person at any one meeting.) They may be printed prior to the publication of the report of the meeting. Ordinarily, each issue will contain those abstracts received at least 75 days before it appears. Abstracts should be limited to 200 words or the equivalent and should avoid displayed expressions and complicated formulae. They can be accepted from non-members of the IMS only if introduced by members. Abstracts must follow the stylistic requests on the abstract blank, or they may be returned.
