

HANDBOOK OF NONPARAMETRIC STATISTICS, VOLUME II: RESULTS FOR TWO AND SEVERAL SAMPLE PROBLEMS, SYMMETRY, AND EXTREMES

By **John E. Walsh**, *Senior Operations Research Scientist and Senior Statistician, Systems Development Corporation*

This is the second volume of a study that will constitute in complete and usable form an organized presentation of all the important experimental nonparametric procedures developed prior to 1958.

Vol. II, Published 629 pages \$15.00

Mathematical Reviews said of VOLUME I:

"This is an impressive piece of work . . . The author is a well-known specialist in this field, to which he has made numerous and substantial contributions, and is therefore one of the best-qualified persons for this undertaking. But that he has proceeded so far and done it so well puts the statistical world in debt to him."

Vol. I, Published 575 pages \$15.00

From the HOLDEN-DAY Library of Pure and Applied Science

Basic Concepts of Probability and Statistics by *J. L. Hodges, Jr. and E. L. Lehmann*, University of California, Berkeley

Explains the basic concepts of probability and statistics, assuming only a knowledge of high-school algebra, and illustrates them with a number of simple but important statistical techniques. Arrangement of the book is suitable for use either for a year-course or for a one-semester course emphasizing either probability or statistics.

\$6.95

Elements of Finite Probability by *J. L. Hodges, Jr. and E. L. Lehmann*, University of California, Berkeley

Provides an introduction to the theory of probability at the pre-calculus level, consisting of Part I of the preceding book supplemented by two additional sections. Assuming only a knowledge of high-school algebra, it gives a rigorous treatment of the basic concepts of probability, including random variables, expectation, and variance.

\$4.75

Stochastic Processes by *Emanuel Parzen*, Stanford University

Provides an invaluable understanding of the use of stochastic processes for readers possessing a background of elementary calculus and some knowledge of the concepts of continuous probability theory. The book contains examples of a wide variety of empirical phenomena for which stochastic processes provide mathematical models, and introduces the methods of probability model building, emphasizing applications of stochastic processes.

STATISTICAL THEORY AND METHOD ABSTRACTS

A Journal of the International Statistical Institute

The object of this abstracting service is to cover published papers concerned with statistical theory, including relevant aspects of probability and mathematical methods, and new contributions to statistical method. These abstracts provide valuable information on new developments for studying problems in many fields; for example, reliability, quality control, experiments, surveys, queueing, congestion and forecasting. Approximately 500 journals are scanned for suitable papers. Abstracts are also prepared from collections of papers such as reports of conferences, symposia and seminars: technical reports of experiment and research stations are covered.

Approximately 400 words long, these literary informative abstracts are written in English; the language of the original paper is indicated. The heading not only gives the name and address of the author together with the journal in which the paper was published, but a note is given of references, tables, etc.

The revised classification scheme consists of three parts. The pages of the journal are colour-tinted in groups to provide visual indication of twelve main sections. Each section is further sub-divided to indicate the main topic of the paper; a secondary number denotes the most important additional topic referred to by the author. A special table in each part links together these two classifications. This scheme is arranged to facilitate transfer to punch cards. When papers are concerned with new statistical tables the relevant classification for the Greenwood/Hartley Guide (1962) is indicated in a special section.

The abstracts are numbered serially, the volume number being inserted as a prefix. The journal is published four times a year and contains approximately 1,250 abstracts. Relevant indexes are published in each issue and combined in a yearly supplement.

<i>Annual Subscription</i>	£7.10s. (U. S. A. \$24.00)
<i>Single Number</i>	£2.5s. (U. S. A. \$4.00)
<i>Loose Leaf Binders for Single Abstract Sheets</i>	16s.3d including postage and packing.

TECHNOMETRICS

*A Journal of Statistics
for the Physical, Chemical and Engineering Sciences*

CONTENTS

TECHNOMETRICS, Vol. 7, No. 2, May 1965

Short-Cut Multiple Comparisons for Balanced Single and Double Classifications: Part 1, Results	<i>T. E. Kurtz, B. F. Link, J. W. Tukey, and D. L. Wallace</i>
Comments on Paper by Kurtz, Link, and Wallace	<i>J. Edward Jackson and Francis J. Anscombe</i>
Authors' Reply to Anscombe's Comments	<i>T. E. Kurtz, B. F. Link, J. W. Tukey, and D. L. Wallace</i>
A Bayesian Approach to Multiple Comparisons	<i>David B. Duncan</i>
A Remark on Multiple Comparison Methods	<i>D. R. Cox</i>
On Some Multiple Decision (Selection and Ranking) Rules	<i>Shanti S. Gupta</i>
On Simultaneous Confidence Intervals for Multinomial Proportions	<i>Leo A. Goodman</i>
NOTES:	
A Note on Multiple Comparisons Using Rank Sums	<i>Ellen Sherman</i>
QUERIES:	
Confidence Limits From Rank Tests	Answered by <i>Lincoln E. Moses</i>
Error Rate Bases	Answered by <i>L. N. Balaam and W. T. Federer</i>
BOOK REVIEWS	
ABSTRACTS OF PAPERS PRESENTED AT SPES SESSION OF THE 124TH ANNUAL MEETING OF THE AMERICAN STATISTICAL ASSOCIATION	
NOTICES AND ERRATA	

The purpose of TECHNOMETRICS is to contribute to the development and use of statistical methods in the physical, chemical and engineering sciences. This objective places a high premium on succinct communication among the physical scientist, engineer, statistician and mathematician. The journal will accept for publication papers describing new statistical techniques expected to be useful in these sciences, papers illustrating the application of known statistical methods to new or novel environments, expository or tutorial papers on particular statistical methods, and papers dealing with the philosophy and problems of applying statistical methods to research, development, design and performance. Brief descriptions of problems requiring solution and short technical notes will also be accepted for publication.

For further information please contact TECHNOMETRICS Post Office Box 587 Benjamin Franklin Station Washington 4, D. C.

THE INSTITUTE OF MATHEMATICAL STATISTICS

(Organized September 12, 1935)

OFFICERS

President:

Herbert Solomon, Department of Statistics, Stanford University, Stanford, California

President-Elect:

Herbert E. Robbins, Department of Mathematical Statistics, Columbia University, New York 27, N.Y.

Executive Secretary:

G. E. Nicholson, Jr., Department of Statistics, University of North Carolina, Chapel Hill, North Carolina

Program Secretary:

Dorothy Gilford, Office of Naval Research, Washington 25, D.C.

Treasurer:

George J. Resnikoff, Department of Statistics, California State College, Hayward, California

Editor:

D. L. Burkholder, Department of Mathematics, University of Illinois, Urbana, Illinois

The purpose of the Institute of Mathematical Statistics is to encourage the development, dissemination, and application of mathematical statistics.

Membership dues including a subscription to the ANNALS OF MATHEMATICAL STATISTICS are \$15.00 per year for residents of the United States or Canada and \$7.00 per year for residents of other countries. There are special rates for students and for some other classes of members. Inquiries regarding membership in the Institute should be sent to the Treasurer of the Institute.

Membership in the Institute of Mathematical Statistics is not required of authors of papers in the *Annals of Mathematical Statistics*, and the fact of membership or non-membership is given no weight in the consideration of submitted manuscripts.

Contents (Continued)

Note on the Wilcoxon-Mann-Whitney Statistic.....	S. K. ZAREMBA	1058
On the Likelihood Ratio Test of a Normal Multivariate Testing Problem II	N. GIRI	1061
Factorial Distributions.....	W. H. MARLOW	1066
Correction Notes.....		1069
Book Review		
H. BERGSTRÖM: Limit Theorems for Convolutions	D. A. DARLING	1070
Abstracts of Papers.....		1073
News and Notices.....		1088
Publications Received.....		1095

MEETINGS OF THE INSTITUTE

TENTATIVE SCHEDULE

WESTERN REGIONAL—Berkeley, California—July 19–21, 1965.

ANNUAL MEETING—Philadelphia, Pennsylvania—September 8–11, 1965.

Abstracts should be submitted in duplicate to the Managing Editor, P. L. Meyer, Department of Mathematics, Washington State University, Pullman, Washington, on abstract blanks which may be obtained from him or from any Secretary or Associate Secretary. Abstracts must be received at least 50 days before the first day of the meeting at which they are to be presented, indicating whether presented by title or in person. (Only one contributed paper may be given in person at any one meeting.) They may be printed prior to the publication of the report of the meeting. Ordinarily, each issue will contain those abstracts received at least 75 days before it appears. Abstracts should be limited to 200 words or the equivalent and should avoid displayed expressions and complicated formulae. They can be accepted from non-members of the IMS only if introduced by members. Abstracts must follow the stylistic requests on the abstract blank, or they may be returned.
