These lecture notes result from the CBMS/NSF Regional Conference held at the University of Michigan in June 1987. Topics in invariance with applications in statistics are discussed in nine chapters—including integrals and the Haar measure, group actions and relatively invariant integrals, invariant statistical methods, models invariant under compact groups, decomposable measures, invariant decision problems, random orthogonal matrices, finite deFinetti style theorems, and finite deFinetti style theorems for linear models.

The Institute of Mathematical Statistics and the American Statistical Association are proud to announce the publication of this new *Series*. The volumes in this *Series* are based on the CBMS/NSF regional research conferences and join SIAM's *CBMS Series in Applied Mathematics* and AMS's *CBMS Series in Mathematics*. Volume 1 will be available late in 1989 with one volume expected per year thereafter.

VOLUME 14 (1988)–NOW AVAILABLE**

- More than 9,900 articles from "core" and "related" journals and books indexed for 1988.
- Complete coverage of 86 core journals in statistics, probability, and related fields.
- Articles selected and indexed from many other journals.
- Subject index lists each article alphabetically according to each *important word* in its title.
- Subject index also lists articles alphabetically according to *key words* not appearing in the title.
- Author index lists each article under the name of each author.
- Reasonable prices:
