IMS Lecture Notes—Monograph Series

This series provides an avenue for the rapid, but carefully refereed, publication of important research results in comprehensive form and expository style. These volumes should be of great value to researchers and advanced students in statistics, probability, and related fields. The series editor is Robert J. Serfling, Johns Hopkins University.

9 FUNDAMENTALS OF STATISTICAL EXPONENTIAL FAMILIES by Lawrence D. Brown

A systematic treatment of the analytical and probabilistic properties of exponential families.

Many if not most of the successful mathematical formulations of statistical questions involve specific exponential families of distributions. This volume examines these mathematical formulations from the perspective of general exponential families with a variety of statistical applications in mind.

283 pages
List price \$25
IMS members \$15

10 DIFFERENTIAL GEOMETRY IN STATISTICAL INFERENCE by S.-I. Amari, O. E. Barndorff-Nielsen, R. E. Kass, S. L. Lauritzen, and C. R. Rao

A concise yet comprehensive presentation of research on differential geometry in statistics.

The papers in this volume were originally presented at the NATO Advanced Workshop on Differential Geometry in Statistical Inference at Imperial College in April 1984. They summarize recent research which has substantially extended both the applicability of differential geometry and our understanding of the role it plays in statistical theory.

244 pages
List price \$25

11 GROUP REPRESENTATIONS IN PROBABILITY AND STATISTICS by Persi Diaconis

An expanded version of lecture notes delivered over the past eight years at Harvard, Stanford, and Ohio State Universities.

This monograph delves into the uses of group theory, particularly non-commutative Fourier analysis, in probability and statistics. It presents useful tools for applied problems and develops familiarity with one of the most active areas in modern mathematics.

COLLOQUE PAUL LEVY

SUR LES PROCESSUS STOCHASTIQUES

(22-26 juin 1987, Palaiseau)

ASTERISQUE n°157-158

372 pages, prix public (TTC) : 255 F, prix membres SMF : 180 FF

For the 100th Anniversary of Paul Lévy's birth, an international Colloquium on Stochastic Processes has been organized at the Ecole Polytechnique from June 22 to June 26, 1987, under the presidency of Professor L.Schwartz.

The original papers in this volume are the texts of most of the invited talks.

This Colloquium has been well received by the international community of probabilists and a particularly rich set of contributions has been presented. The liveliest themes of the present development of the theory of stochastic processes have remarkable connections with Paul Lévy's works, as numerous talks have shown.

Table of contents

- Laurent SCHWARTZ - *Quelques réflexions et souvenirs sur Paul Lévy.*
Kai-Lai CHUNG - *Reminiscences of some Paul Lévy's ideas in Brownian Motion and in Markov Chains.*
Jean-Michel BISMUT - *Formules de localisation et formules de Paul Lévy.*
Krzysztof BURDZY, Jim W.PITMAN and Marc YOR - *Some asymptotic laws for crossings and excursions.*
Donald L.BURKHOLDER - *Sharp inequalities for martingales and stochastic integrals.*
Vladimir DOBRIC, Michael B.MARCUS, Michel WEBER - *The distribution of large values of the supremum of a Gaussian process.*
Lester E.DUBINS and Gideon SCHWARZ - *A sharp inequality for sub-martingales and stopping-times.*
Eugene B.DYNKIN - *Representation for functionals of superprocesses by multiple stochastic integrals, with applications to self-intersection local times.*
Hans FOLLMER and Marianne ORT - *Large deviations and surface entropy for Markov fields.*
Sylvestre GALLOT - *Isoperimetric inequalities based on integral norms of Ricci curvature.*
Harry KESTEN - *Recent progress in rigorous percolation theory.*
Frank B.KNIGHT - *Inverse local times, positive sojourns, and maxima for Brownian motion.*
Terence J.LYONS and Zheng WEIAN - *A crossing estimate for the canonical process on a Dirichlet space and a tightness result.*
V.D.MILMAN - *The heritage of Paul Lévy in geometrical functional analysis.*
K.R.PARTHASARATHY - *A unified approach to classical, bosonic and fermionic Brownian motions.*
Pal REVESZ - *In random environment the local time can be very big.*
Fraydoun REZAKHANLOU and S.James TAYLOR - *The packing measure of the graph of stable process.*
Alan-Sol SZNITMAN - *A trajectorial representation for certain non linear equations.*

STATISTICAL SCIENCE

a review journal of the institute of mathematical statistics

EXECUTIVE EDITOR: Carl N. Morris, *University of Texas at Austin*
EDITORS: Ingram Olkin, *Stanford University*
Adrian F. M. Smith, *University of Nottingham*
Stephen Stigler, *University of Chicago*
James V. Zidek, *University of British Columbia*

Statistical Science presents the full range of contemporary statistical thought at a modest technical level accessible to the broad community of practitioners, teachers, researchers, and students in statistics, probability, and related fields. The attractive and lively variety of discussion articles, historical reviews, reports and proceedings, and conversations with leading personalities has been enthusiastically received by the statistics and probability communities.

From Volumes 1-3 (1986-88)

Articles by Freedman & Navidi on "Models for Adjusting the Census"; Efron & Tibshirani on "The Bootstrap"; Bookstein on "Morphometrics"; Hastie & Tibshirani on "Generalized Additive Models"; Fishburn on "The Axioms of Subjective Probability"; Shafer, Lindley, Spiegelhalter on "The Calculus of Uncertainty in Artificial Intelligence and Expert Systems"; Everitt on "Statistics in Psychiatry"; Gastwirth on "The Statistical Precision of Medical Screening Procedures"; Hodges on "Uncertainty, Policy Analysis, and Statistics"; Becker, Cleveland, & Wilks on "Dynamic Graphics for Data Analysis"; Rao on "Prediction in Growth Curve Models"; Freedman & Zeisel on "Cancer Risk Assessment: From Mouse to Man"; Iyengar & Greenhouse on "Selection Models and the File Drawer Problem"; Dempster on "Employment Discrimination and Statistical Science"; Reid on "Saddlepoint Methods"; Good on "The Interface between Statistics and Philosophy of Science"; and Ramsay on "Monotone Regression Splines". *Historical reviews* by Le Cam on "The Central Limit Theorem Around 1935"; Geisser on "The Collected Works of George E. P. Box"; Good on "Statistical Applications of Poisson's Work"; Lai & Siegmund on "The Contributions of Herbert Robbins"; Stigler on "Laplace's Memoir on Inverse Probability"; Shafer on "Savage Revisited"; Wegman on "Harald Cramér's Personal Recollections"; J. F. Box on "Guinness, Gosset, and Fisher"; Hansen on the "History of Survey Sampling"; and Darrell on "The Life of Harold Hotelling". *Papers and reports* from the Workshop on Computers in Statistical Research and the Ninth Symposium on Statistics and the Environment. *Conversations* with T. W. Anderson, G. A. Barnard, D. Blackwell, A. H. Bowker, G. Box, C. Daniel, P. Diaconis, M. Hansen, E. L. Lehmann, F. Mosteller, C. R. Rao, C. Stein, and J. W. Tukey.

Featuring in Volume 4, Numbers 1 and 2 (1989)

Articles by Stigler on "Francis Galton's Account of the Invention of Correlation"; Kendall on "A Survey of the Statistical Theory of Shape"; Trumbo on "How to Get Your First Research Grant"; and Heitjan on "Inference from Grouped Continuous Data". *Reports* from the Committee on Applied and Theoretical Statistics on "Statistical Models and Analysis in Auditing" and "Discriminant Analysis and Clustering". A *conversation* with Maurice Bartlett.

Individual members of the Institute may elect to receive *Statistical Science*, in addition to other benefits, for \$35. Nonmember subscriptions to *Statistical Science* only are available to individuals for \$30. All library subscriptions to the *Annals* include a subscription to *Statistical Science*; library subscriptions to *Statistical Science* only are \$45. For additional information on how to receive *Statistical Science*, please write to the IMS Business Office, 3401 Investment Boulevard #7, Hayward, California 94545 (USA).
