

THE ANNALS of PROBABILITY

AN OFFICIAL JOURNAL OF
THE INSTITUTE OF MATHEMATICAL STATISTICS

Special Invited Paper

- Random walks on discrete groups: boundary and entropy
V. A. KAIMANOVICH AND A. M. VERSHIK 457

Articles

- On the maximum of a random walk with small negative drift MICHAEL J. KLASS 491
Some results on LIL behavior J. KUELBS AND J. ZINN 506
Renewal theory for m -dependent variables SVANTE JANSON 558
Strong laws for independent identically distributed random variables
indexed by a sector ALLAN GUT 569
Exit times for symmetric stable processes in \mathbb{R}^n R. F. BASS AND M. CRANSTON 578
A uniform lower bound for Hausdorff dimension for transient symmetric
Lévy processes W. J. HENDRICKS 589
How big are the increments of the local time of a Wiener process?
E. CSÁKI, M. CSÖRGÖ, A. FÖLDES, AND P. RÉVÉSZ 593
Some results on increments of the Wiener process with applications to
lag sums of I.I.D. random variables D. L. HANSON AND R. P. RUSSO 609
Harmonic functions and the Dirichlet problem for revival Markov
processes KYLE SIEGRIST 624
Valeurs prises par les martingales locales continues a un instant donne
M. EMERY, C. STRICKER AND J. A. YAN 635
Markov strategies for optimal control problems indexed by a partially ordered set
G. F. LAWLER AND R. J. VANDERBEI 642
Exponential moments for hitting times of uniformly ergodic Markov
processes RENE CARMONA AND ABEL KLEIN 648
Estimate on moments of the solutions to stochastic differential equations
in the plane J. REID 656
Un theoreme ergodique presque sous-additif YVES DERRIENNIC 669
Stationarity on finite strings and shift register sequences ARIF ZAMAN 678
Gaussian measure of normal subgroups T. BYCZKOWSKI AND A. HULANICKI 685
The binary contact path process DAVID GRIFFEATH 692
Site recurrence for annihilating random walks on Z_d RICHARD ARRATIA 706
Two critical exponents for finite reversible nearest particle systems
THOMAS M. LIGGETT 714
Some Poisson approximations using compensators T. C. BROWN 726
Convergence of a class of empirical distribution functions of dependent
random variables B. W. SILVERMAN 745
Exponential life functions with NBU components MOSHE SHAKED 752
The reliability of k out of n systems PHILIP J. BOLAND AND FRANK PROSCHAN 760
Sharp bounds on the absolute moments of a sum of two I.I.D. random
variables D. C. COX AND J. H. B. KEMPERMAN 765
Un theoreme de la limite locale pour une classe de transformations dilatan-
tes et monotones par morceaux J. ROSSEAU-EGELE 772
Rotational representations of stochastic matrices STEVE ALPERN 789

continued on back cover

Vol. 11, No. 3—August 1983

THE INSTITUTE OF MATHEMATICAL STATISTICS

(Organized September 12, 1935)

The purpose of the Institute of Mathematical Statistics is to encourage the development, dissemination, and application of mathematical statistics.

OFFICERS

President:

Patrick Billingsley, Department of Statistics, University of Chicago, Chicago, Illinois 60637

President-Elect:

Ingram Olkin, Department of Statistics, Stanford University, Stanford, California 94305

Past-President:

Mark Kac, Department of Mathematics, University of Southern California, Los Angeles, California 90007

Executive Secretary:

Kjell Doksum, Department of Statistics, University of California, Berkeley, California 94720

Treasurer:

Bruce E. Trumbo, Department of Statistics, California State University, Hayward, California 94542

Please send correspondence to: IMS Business Office, 3401 Investment Blvd., Suite 6, Hayward, California 94545

Program Secretary:

Richard Johnson, Department of Statistics, University of Wisconsin, 1210 West Dayton St., Madison, Wisconsin 53706

Editor: *Annals of Statistics*

Michael D. Perlman, Department of Statistics, University of Washington, Seattle, Washington 98195

Editor: *Annals of Probability*

Harry Kesten, Department of Mathematics, Cornell University, Ithaca, N.Y. 14853

Editor: *IMS Bulletin*

William C. Guenther, University of Wyoming, Box 3332, University Station, Laramie, Wyoming 82071

Editor: *IMS Lecture Notes—Monograph Series*

Shanti S. Gupta, Department of Statistics, Purdue University, West Lafayette, Indiana 47907

Managing Editor:

Jagdish S. Rustagi, Department of Statistics, The Ohio State University, Columbus, Ohio 43210

Membership. Membership dues including a subscription to one *Annals* and *The Institute of Mathematical Statistics Bulletin* are \$37.00 per year for all members. Special rates of \$17.00 per year are available to students. The dues are approximately twenty-five percent higher for members who wish both *Annals* as well as the *Bulletin*. Inquiries regarding membership in the Institute should be sent to the Treasurer at the business office.

Subscription Rates. Current volumes (four issues per calendar year) of the *Annals of Probability* are \$48.00. Single issues are \$13 each. Current volumes (four issues per calendar year) of the *Annals of Statistics* are \$55.00. Single issues are \$15.00 each. Members of the Institute of Mathematical Statistics pay different rates (see above). Back numbers of both *Annals* and the *Annals of Mathematical Statistics* (Volumes 1 through 43) may be purchased from the Treasurer at the business office.

The Annals of Probability, Volume 11, Number 3, August 1983. Published in February, May, August, and November by The Institute of Mathematical Statistics, IMS Business Office, 3401 Investment Blvd., Suite 6, Hayward, California 94545.

Mail to the *Annals of Probability* should be addressed to the Editor, Managing Editor, or the Treasurer as described above. It should *not* be addressed to Waverly Press.

EDITORIAL POLICY

The main purpose of the *Annals of Probability* and the *Annals of Statistics* is to publish contributions to the theory of probability and statistics and to their applications. The emphasis is on importance and interest; formal novelty and mathematical correctness alone are not sufficient. Especially appropriate are authoritative expository papers and surveys of areas in vigorous development. All papers are refereed.

THE ANNALS OF PROBABILITY

INSTRUCTIONS FOR AUTHORS

Submission of Papers. Papers to be submitted for publication should be sent to the Editor of the *Annals of Probability*. (For current address, see the latest issue of the *Annals*.) The original (or xerox copy) should be submitted with two additional copies on paper that will take ink corrections. The manuscript will *not* normally be returned to the author; when expressly requested by the author, one copy of the manuscript will be returned.

Preparation of Manuscripts. Manuscripts should be typewritten, entirely double-spaced, including references, with wide margins at sides, top and bottom. Dittoed or mimeographed papers are acceptable only if completely legible; xerox copies are preferable. When technical reports are submitted, all extraneous sheets and covers should be removed.

Submission of Reference Papers. Copies (preferably two) of unpublished or not easily available papers cited in the manuscript should be submitted with the manuscript.

Title and Abbreviated Title. This title should be descriptive and as concise as is feasible, i.e., it should indicate the topic of the paper as clearly as possible, but every word in it should be pertinent. An abbreviated title to be used as a running head is also required, and should be given below the main title. This should normally not exceed 35 characters. For example, a title might be "A Limit Theorem for Conditioned Recurrent Random Walk Attracted to a Stable Law," with the running head "Limit Theorem for Recurrent Random Walk" or possibly "Recurrent Random Walk Attracted to a Stable Law," depending on the emphasis to be conveyed.

Summary. Each manuscript is required to contain a summary which will be printed immediately after the title, clearly separated from the rest of the paper. Its main purpose is to inform the reader quickly of the nature and results of the paper; it may also be used as an aid in retrieving information. The length of a summary will clearly depend on the length and difficulty of the paper, but in general it should not exceed 150 words. It should be typed on a separate page, under the heading "Summary," followed by the title of the paper. Formulas should be used as sparingly as possible. The summary should not make reference to results or formulas in the body of the paper—it should be self-contained.

Footnotes. Footnotes should be reduced to a minimum and, where possible, should be replaced by remarks in the text or in the references; formulas in footnotes should be avoided. Footnotes in the text should be identified by superscript numbers and typed together, double-spaced on a separate page.

Key Words. Included as the first footnote on page 1 should be the headings:

American Mathematical Society 1980 subject classifications. Primary —; Secondary—. Key words and phrases.

The classification numbers representing the primary and secondary subjects of the article may be found with instructions for its use in the *Mathematical Reviews Annual Subject Index-1980*. The key words and phrases should describe the subject matter of the article; generally they should be taken from the body of the paper.

Identification of Symbols. Manuscripts for publication should be clearly prepared to insure that all symbols are properly identified. Distinguish between "oh" and "zero"; "ell" and "one"; "epsilon" and "element of"; "kappa" and "kay," etc. Indicate also when special type is required (Greek, German, script, boldface, etc.); other letters will be set in italics. Acronyms should be introduced sparingly.

Figures and Tables. Figures, charts, and diagrams should be prepared in a form suitable for photographic reproduction and should be professionally drawn twice the size they are to be printed. (These need not be submitted until the paper has been accepted for publication.) Tables should be typed on separate pages with accompanying footnotes immediately below the table.

Formulas. Fractions in the text are preferably written with the solidus or negative exponent;

thus, $(a + b)/(c + d)$ is preferred to $\frac{a + b}{c + d}$, and

$(2\pi)^{-1}$ or $1/(2\pi)$ to $\frac{1}{2\pi}$. Also, $a^{b(c)}$ and $a_{b(c)}$ are

preferred to a^{b^c} and a_{b^c} , respectively. Complicated exponentials should be represented with the symbol exp. A fractional exponent is preferable to a radical sign.

References. References should be typed double-spaced and should follow the style:

[5] Doob, J. L. (1944). The elementary Gaussian processes. *Ann. Math. Statist.* 15 229-282.

In textual material, the format "... Doob (1944) ..." is normally preferred to "... Doob [5] ..." Multiple references can be distinguished as "... Doob (1944a) ..." Abbreviations for journals should be taken from a current index issue of *Mathematical Reviews*.

Proofs. Author will ordinarily receive galley proofs. Corrected galley proofs should be sent to the Managing Editor of the *Annals of Probability*. (For current address, see the latest issue of the *Annals*.)
