

THE ANNALS of STATISTICS

AN OFFICIAL JOURNAL OF
THE INSTITUTE OF MATHEMATICAL STATISTICS

	PAGE
Articles	
Parameter, factorization and inference based on significance likelihood, and objective posterior D. A. S. FRASER AND JOCK MACKEY	559
Necessary and sufficient conditions for asymptotic joint normality of a statistic and its subsample values.....J. A. HARTIGAN	573
Termination, moments and exponential boundedness of the stopping rule for certain invariant sequential probability ratio tests TZE LEUNG LAI	581
Unified large-sample theory of general chi-squared statistics for tests of fit.....DAVID S. MOORE AND M. C. SPRUILL	599
Exact robustness studies of tests of two multivariate hypotheses based on four criteria and their distribution problems under violations K. C. S. PILLAI AND SUDJANA	617
Uniformly minimum variance estimation in location parameter families LENNART BONDESSON	637
On minimizing the probability of misclassification for linear feature selection L. F. GUSEMAN, JR., CHARLES B. PETERS, JR. AND HOMER F. WALKER	661
Choice of an optimum sampling strategy—I M. K. RAMAKRISHNAN	669
On the minimax estimation of a random probability with known first N moments.....V. M. JOSHI	680
Continuous time regressions with discrete data.....P. M. ROBINSON	688
Consistency in nonparametric estimation of the mode THOMAS W. SAGER	698
Short Communications	
Some contributions to the theory of multistage Youden design K. AFSARINEJAD AND A. HEDAYAT	707
Further contributions to the theory of F -squares design A. HEDAYAT, D. RAGHAVARAO AND E. SEIDEN	712
On most effective tournament plans with fewer games than competitors WILLI MAURER	717
Isomorphic $L_2(7)$ designs.....PETER W. M. JOHN	728
On connectedness in two-way elimination of heterogeneity designs D. RAGHAVARAO AND W. T. FEDERER	730
A note on some Bayesian nonparametric estimates.....MICHAEL GOLDSTEIN	736
On Edgeworth expansions with unknown cumulants H. L. GRAY, W. A. COBERLY AND T. O. LEWIS	741
Characterizing exponential family distributions by moment generating functions.....ALLAN R. SAMPSON	747
Characterization of distributions by sets of moments of order statistics.....BARRY C. ARNOLD AND GLEN MEEDEN	754

Contents continued on back cover

Vol. 3, No. 3—May 1975

THE INSTITUTE OF MATHEMATICAL STATISTICS

(Organized September 12, 1935)

The purpose of the Institute of Mathematical Statistics is to encourage the development, dissemination, and application of mathematical statistics.

OFFICERS

President:

Frederick Mosteller, Department of Statistics, Science Center, Room 603, Harvard University, One Oxford Street, Cambridge, Mass. 02138

President-Elect:

Donald L. Burkholder, Department of Mathematics, University of Illinois, Urbana, Illinois 61801

Executive Secretary:

George J. Resnikoff, Department of Statistics, California State University, 25800 Hillary St., Hayward, California 94542

Treasurer:

Robert M. Elashoff, M.R. IV-Room 111, University of California, San Francisco, California 94143
IMS Business Office, 1367 Laurel Street, San Carlos, California 94070

Program Secretary:

William L. Harkness, Pennsylvania State University, University Park, Pennsylvania 16801

Editor: *Annals of Statistics*

I. Richard Savage, Department of Statistics, P.O. Box 2179, Yale Station, New Haven, Connecticut 06520

Editor: *Annals of Probability*

Ronald Pyke, Department of Mathematics, University of Washington, Seattle, Washington 98195

Managing Editor:

Donald R. Truax, Department of Mathematics, University of Oregon, Eugene, Oregon 97403

Membership. Membership dues including a subscription to one *Annals* and *The Institute of Mathematical Statistics Bulletin* are \$18.00 per year for residents of the United States or Canada and \$12.00 per year for residents of other countries. Special rates of \$9.00 per year are available to students. Rates in each category are one-third higher for members who wish both *Annals* as well as the *Bulletin*. Inquiries regarding membership in the Institute should be sent to the Treasurer of the Institute.

Subscription Rates. Current volumes (six issues per calendar year) of the *Annals of Probability* and the *Annals of Statistics* are each \$25.00. Members of the Institute of Mathematical Statistics pay different rates (see above). Single issues are \$5.00. Back numbers of both *Annals* and the *Annals of Mathematical Statistics* (Volume 1 through 43) may be purchased from the Treasurer.

The Annals of Statistics, Volume 3, Number 3, May 1975. Published bimonthly in January, March, May, July, September, and November by The Institute of Mathematical Statistics, IMS Business Office, 1367 Laurel Street, San Carlos, California 94070.

Mail to the *Annals of Statistics* should be addressed to either the Editor, Managing Editor or the Treasurer as described above. It should not be addressed to Waverly Press.

PRINTED AT THE

WAVERLY PRESS, INC., BALTIMORE, MARYLAND 21202 U.S.A.

Second-class postage paid at San Francisco, California and at additional mailing offices

PAST EDITOR OF THE ANNALS OF STATISTICS

INGRAM OLKIN, 1972-1973

EDITORIAL POLICY

The main aim of the *Annals of Statistics* and the *Annals of Probability* is to publish original contributions related to the theory of statistics and probability. The emphasis is on quality, importance and interest; formal novelty and mathematical correctness alone are not sufficient. Particularly appropriate for the *Annals* are important theoretical papers and applied contributions which either stimulate theoretical interest in important new problems or make substantial progress in existing applied areas. Of special interest are authoritative expository or survey articles, whether on theoretical areas of vigorous recent development, or on specific applications. All papers are refereed.

CHANGE OF MANAGING EDITOR

Beginning with the July issue of the *Annals of Statistics* and the August issue of the *Annals of Probability*, the new Managing Editor will be Professor Donald R. Truax, Department of Mathematics, University of Oregon, Eugene, Oregon 97403. Correspondence about manuscripts to appear in issues prior to these should be directed to the current Managing Editor, Professor K. J. C. Smith.

THE ANNALS OF STATISTICS

INSTRUCTIONS FOR AUTHORS

Submission of Papers. Papers to be submitted for publication should be sent to the Editor of the *Annals of Statistics*. (For current address, see the latest issue of the *Annals*.) The original (or xerox copy) should be submitted with three additional copies on paper that will take ink corrections. The manuscript will *not* normally be returned to the author; when expressly requested by the author, one copy of the manuscript will be returned.

Preparation of Manuscripts. Manuscripts should be typewritten, entirely double-spaced, including references, with wide margins at sides, top and bottom. Dittoed or mimeographed papers are acceptable only if completely legible; xerox copies are preferable. When technical reports are submitted, all extraneous sheets and covers should be removed.

Submission of Reference Papers. Copies (preferably two) of unpublished or not easily available papers cited in the manuscript should be submitted with the manuscript.

Title and Abbreviated Title. The title should be descriptive and as concise as is feasible, i.e., it should indicate the topic of the paper as clearly as possible, but every word in it should be pertinent. An abbreviated title to be used as a running head is also required, and should be given below the main title. This should normally not exceed 35 characters. For example, a title might be "A Limit Theorem for Conditioned Recurrent Random Walk Attracted to a Stable Law," with the running head "Limit Theorem for Recurrent Random Walk" or possibly "Recurrent Random Walk Attracted to a Stable Law", depending on the emphasis to be conveyed.

Summary. Each manuscript is required to contain a summary, which will be printed immediately after the title, clearly separated from the rest of the paper. Its main purpose is to inform the reader quickly of the nature and results of the paper; it may also be used as an aid in retrieving information. The length of a summary will clearly depend on the length and difficulty of the paper, but in general it should not exceed 150 words. It should be typed on a separate page, under the heading "Summary", followed by the title of the paper. Formulas should be used as sparingly as possible. The summary should not make reference to results or formulas in the body of the paper—it should be self-contained.

Footnotes. Footnotes should be reduced to a minimum and, where possible, should be replaced by remarks in the text or in the references; formulas in footnotes should be avoided. Footnotes in the text should be identified by superscript numbers and typed together, double-spaced, on a separate page.

Key Words. Included as the first footnote on page 1 should be the headings:

American Mathematical Society 1970 subject classifications. Primary—; Secondary—.
Key words and phrases.

The classification numbers representing the primary and secondary subjects of the article may be found with instructions for its use, as an Appendix to *Mathematical Reviews Index* to Volume 39, June 1970. (See, also, *The Notices of the American Mathematical Society*, June 1970, pp. 616–618, for more details.) The key words and phrases should describe the subject matter of the article; generally they should be taken from the body of the paper.

List of Symbols. A completely typewritten list of symbols, identified typographically, not mathematically, should be attached to the manuscript on a separate page. Distinguish between "oh" and "zero"; "ell" and "one"; "kappa" and "kay", etc. Indicate also when special type is required (Greek, German, script, boldface, etc.); other letters will be set in italics.

Figures and Tables. Figures, charts, and diagrams should be prepared in a form suitable for photographic reproduction and should be professionally drawn twice the size they are to be printed. (These need not be submitted until the paper has been accepted for publication.) Tables should be typed on separate pages with accompanying footnotes immediately below the table.

Formulas. Fractions in the text are preferably written with the solidus or negative exponent; thus, $(a + b)/(c + d)$ is preferred to $\frac{a + b}{c + d}$, and $(2\pi)^{-1}$ or $1/(2\pi)$ to $\frac{1}{2\pi}$. Also, $a^{b(c)}$ and $a_{b(c)}$ are preferred to a^{bc} and a_{bc} , respectively. Complicated exponentials should be represented with the symbol exp. A fractional exponent is preferable to a radical sign.

References. References should be typed double-spaced and should follow the style:

[5] Wilks, S. S. (1938). The large-sample distribution of the likelihood ratio for testing composite hypotheses. *Ann. Statist.* 1 60–62.

In textual material, the format "... Wilks (1938) ..." is normally preferred to "... Wilks [5] ...". Multiple references can be distinguished as "... Wilks (1938a) ...". Abbreviations for journals should be taken from *Mathematical Reviews Index* to Volume 40, 1970, pp. 1683–1702.

Proofs. Author will ordinarily receive galley proofs. Corrected galley proofs should be sent to the Managing Editor of the *Annals of Statistics*. (For current address, see the latest issue of the *Annals*.)
