

THE ANNALS of STATISTICS

AN OFFICIAL JOURNAL OF
THE INSTITUTE OF MATHEMATICAL STATISTICS

Articles

Bayesian inference using intervals of measures	LORRAINE DEROBERTIS AND J. A. HARTIGAN	235
Robustness of one- and two-sample rank tests against gross errors	HELMUT RIEDER	245
On local asymptotic minimaxity and admissibility in robust estimation	HELMUT RIEDER	266
Nonnegative minimum biased invariant estimation in variance component models	JOACHIM HARTUNG	278
On the existence of unbiased nonnegative estimates of variance covariance components	FRIEDRICH PUKELSHEIM	293
An optimal autoregressive spectral estimate	RITEI SHIBATA	300
The second order properties of a time series recursion	V. SOLO	307
Asymptotic optimality of invariant sequential probability ratio tests	TZE LEUNG LAI	318
Asymptotically optimum kernels for density estimation at a point	JEROME SACKS AND DONALD YLVISAKER	334
Estimation of a multivariate density function using delta sequences	V. SUSARLA AND G. WALTER	347
A Bayesian nonparametric approach to reliability	R. L. DYKSTRA AND PURUSHOTTAM LAUD	356
Asymptotically optimal tests for heteroscedasticity in the general linear model	THOMAS HAMMERSTROM	368
Tests for the independence between two seemingly unrelated regression equations	TAKEAKI KARIYA	381
On the projections of isotropic distributions	MORRIS L. EATON	391
Distributions of some matrix variates and latent roots in multivariate Behrens-Fisher discriminant analysis	YASUKO CHIKUSE	401
Isotropy and sphericity: some characterisations of the normal distribution	GÉRARD LETAC	408
Further results on invariance and randomization in fractional replication	H. PESOTAN AND B. L. RAKTOE	418
On the use of a statistic based on sequential ranks to prove limit theorems for simple linear rank statistics	DAVID M. MASON	424
Short Communications		
Generalization of Block-Savits convolution result	JOHN KITCHIN AND FRANK PROSCHAN	437
Brown-Mood type median estimators for simple regression models	D. G. KILDEA	438
The asymptotic behavior of monotone regression estimates	F. T. WRIGHT	443
Sums of random variables indexed by a partially ordered set and the estimation of integral regression functions	F. T. WRIGHT	449
On the exact asymptotic behavior of estimators of a density and its derivatives	R. S. SINGH	453
Efficient nonparametric estimators of parameters in the general linear hypothesis	LOUISE DIONNE	457
Applying asymptotic shapes to nonexponential families	GIDEON SCHWARZ	461

Vol. 9, No. 2—March 1981

THE INSTITUTE OF MATHEMATICAL STATISTICS

(Organized September 12, 1935)

The purpose of the Institute of Mathematical Statistics is to encourage the development, dissemination, and application of mathematical statistics.

OFFICERS

President:

Peter Bickel, Department of Statistics, University of California, Berkeley, California 94720

President-Elect:

Mark Kac, Rockefeller University, New York, New York 10021

Past President:

George E. P. Box, Department of Statistics, University of Wisconsin, 1210 W. Dayton St., Madison, Wisconsin 53706

Executive Secretary:

Martin Fox, Department of Statistics and Probability, Michigan State University, East Lansing, Michigan 48824

Treasurer:

Hebok Park, Department of Statistics, California State University, Hayward, California 94542
IMS Business Office, 3401 Investment Blvd., Suite 6, Hayward, California 94545

Program Secretary:

Richard Johnson, Department of Statistics, University of Wisconsin, 1210 West Dayton St., Madison, Wisconsin 53706

Editor: *Annals of Statistics*

David V. Hinkley, Department of Applied Statistics, University of Minnesota, St. Paul Campus, St. Paul, Minnesota 55108

Editor: *Annals of Probability*

Richard M. Dudley, Department of Mathematics Room 2-245, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139

Managing Editor:

Jagdish S. Rustagi, Department of Statistics, Ohio State University, Columbus, Ohio 43210

Membership. Membership dues including a subscription to one *Annals* and *The Institute of Mathematical Statistics Bulletin* are \$35.00 per year for all members. Special rates of \$16.00 are available to students. Rates in each category are one-fourth higher for members who wish both *Annals* as well as the *Bulletin*. Inquiries regarding membership in the Institute should be sent to the Treasurer at the Business Office.

Subscription Rates. Current volumes (six issues per calendar year) of the *Annals of Probability* are \$44.00. Current volumes (six issues per calendar year) of the *Annals of Statistics* are \$50.00. Members of the Institute of Mathematical Statistics pay different rates (see above). Single issues are \$8.00. Back numbers of both *Annals* and the *Annals of Mathematical Statistics* (Volume 1 through 43) may be purchased from the Treasurer.

The Annals of Statistics. Volume 9, Number 2, March 1981. Published bimonthly in January, March, May, July, September, and November by The Institute of Mathematical Statistics, IMS Business Office, 3401 Investment Blvd., Suite 6, Hayward, California 94545.

Mail to the *Annals of Statistics* should be addressed to either the Editor, Managing Editor or the Treasurer, as described above. It should not be addressed to Waverly Press.

PRINTED AT THE
WAVERLY PRESS, INC., BALTIMORE, MARYLAND 21202 U.S.A.
Second-class postage paid at Hayward, California and at additional mailing offices

ANNALS OF PROBABILITY

RONALD PYKE 1972-1975
PATRICK BILLINGSLEY 1976-1978

From August 15, 1980 to August 15, 1981, manuscripts should be sent to Professor David Hinkley at Department of Statistics, Stanford University, Stanford, CA 94305.

EDITORIAL POLICY

The main purpose of the *Annals of Statistics* and the *Annals of Probability* is to publish contributions to the theory of statistics and probability and to their applications. The emphasis is on importance and interest, not formal novelty and correctness. Especially appropriate are authoritative expository papers and surveys of areas in vigorous development. All papers are refereed.

THE ANNALS OF STATISTICS

INSTRUCTIONS FOR AUTHORS

Submission of Papers. Papers to be submitted for publication should be sent to the Editor of the *Annals of Statistics*. (For current address, see the latest issue of the *Annals*.) The original (or xerox copy) should be submitted with three additional copies on paper that will take ink corrections. The manuscript will *not* normally be returned to the author; when expressly requested by the author, one copy of the manuscript will be returned.

Preparation of Manuscripts. Manuscripts should be typewritten, entirely double-spaced, including references, with wide margins at sides, top and bottom. Dittoed or mimeographed papers are acceptable only if completely legible; xerox copies are preferable. When technical reports are submitted, all extraneous sheets and covers should be removed.

Submission of Reference Papers. Copies (preferably two) of unpublished or not easily available papers cited in the manuscript should be submitted with the manuscript.

Title and Abbreviated Title. The title should be descriptive and as concise as is feasible, i.e., it should indicate the topic of the paper as clearly as possible, but every word in it should be pertinent. An abbreviated title to be used as a running head is also required, and should be given below the main title. This should normally not exceed 35 characters. For example, a title might be "The Curvature of a Statistical Model, with Applications to Large-Sample Likelihood Methods," with the running head "Curvature of Statistical Model" or possibly "Asymptotics of Likelihood Methods," depending on the emphasis to be conveyed.

Summary. Each manuscript is required to contain a summary, which will be printed immediately after the title, clearly separated from the rest of the paper. Its main purpose is to inform the reader quickly of the nature and results of the paper; it may also be used as an aid in retrieving information. The length of a summary will clearly depend on the length and difficulty of the paper, but in general it should not exceed 150 words. It should be typed on a separate page, under the heading "Summary," followed by the title of the paper. Formulas should be used as sparingly as possible. The summary should not make reference to results or formulas in the body of the paper—it should be self-contained.

Footnotes. Footnotes should be reduced to a minimum and, where possible, should be replaced by remarks in the text or in the references; formulas in footnotes should be avoided. Footnotes in the text should be identified by superscript numbers and typed together, double-spaced, on a separate page.

Key Words. Included as the first footnote on page 1 should be the headings:

American Mathematical Society 1970 subject classifications. Primary—; Secondary—.
Key words and phrases.

The classification numbers representing the primary and secondary subjects of the article may be found with instructions for its use, as an Appendix to *Mathematical Reviews* Index to Volume 39, June 1970. (See, also, *The Notices of the American Mathematical Society*, June 1970, *Bulletin of the Institute of Mathematical Statistics*, September 1974; or a current index issue of *Mathematical Reviews*.) The key words and phrases should describe the subject matter of the article; generally they should be taken from the body of the paper.

Identification of Symbols. Manuscripts for publication should be clearly prepared to insure that all symbols are properly identified. Distinguish between "oh" and "zero"; "ell" and "one"; "kappa" and "kay," etc. Indicate also when special type is required (Greek, German, script, boldface, etc.); other letters will be set in italics. Acronyms should be introduced sparingly.

Figures and Tables. Figures, charts, and diagrams should be prepared in a form suitable for photographic reproduction and should be professionally drawn twice the size they are to be printed. (These need not be submitted until the paper has been accepted for publication.) Tables should be typed on separate pages with accompanying footnotes immediately below the table.

Formulas. Fractions in the text are preferably written with the solidus or negative exponent; thus, $(a + b)/(c + d)$ is preferred to $\frac{a + b}{c + d}$, and $(2\pi)^{-1}$ or $1/(2\pi)$ to $\frac{1}{2\pi}$. Also, $a^{b(c)}$ and $a_{b(c)}$ are preferred to a^{bc} and a_{bc} , respectively. Complicated exponentials should be represented with the symbol exp. A fractional exponent is preferable to a radical sign.

References. References should be typed double-spaced and should follow the style:

Wilks, S.S. (1938). The large-sample distribution of the likelihood ratio for testing composite hypotheses. *Ann. Statist.* 1 60-62.

In textual material, the format "... Wilks (1938) ..." should be used. Multiple references can be distinguished as "... Wilks (1938a) ..." Abbreviations for journals should be taken from a current index issue of *Mathematical Reviews*.

Proofs. Author will ordinarily receive galley proofs. Corrected galley proofs should be sent to the Managing Editor of the *Annals of Statistics*. (For current address, see the latest issue of the *Annals*.)
