Springer

Springer LaTeX and plain-TeX macros

We can use your TeX files directly for phototypesetting if you have used our macros. Makropackages are available for the following journals:

LJour1 LaTeX styles for Acta Informatica, Applicable Algebra in Engineering, Communication and Computing, Archive for Mathematical Logic, Astronomy & Astrophysics Reviews, Calculus of Variations, Communications in Mathematical Physics, Continuum Mechanics and Thermodynamics, Economic Theory, Inventiones mathematicae, Journal of Evolutionary Economics, Journal of Mathematical Biology, Manuscripta mathematica, Mathematische Annalen, Mathematische Semesterberichte, Mathematische Zeitschrift, Numerische Mathematik, Probability Theory and Related Fields, Statistical papers, Theoretica Chimica Acta

PJour1g global plain TeX packages for all journals mentioned above; ***PJour 1*** may also still be used. All packages are available via mailserver, FTP server or on DOS diskettes.

Mailserver

Send an e-mail message to svserv@vax.ntp.springer.de
which must contain one (several) of the following commands:

LJour1 get /tex/latex/ljour1.zip
PJour1g get /tex/plain/pjour1g.zip

In order to be transmitted ungarbled via the net, the files are pkzipped and uunencoded. The line get /tex/help-tex.txt in your e-mail to svserv will send you a file explaining how to unpack the files you receive.
Please do not send regular e-mail to this address.

FTP server

The internet address is 192.129.24.12 (trick.ntp.springer.de) The username is FTP or ANONYMOUS and the files are in the directory /pub/tex

Diskettes

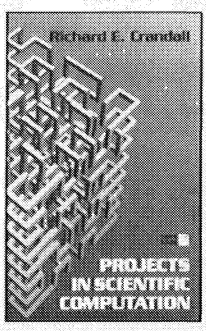
To get the macro files and the AMS fonts (when needed) on 3.5″ DOS diskettes please write to:

Springer-Verlag, Journal Production,
Tiergartenstr. 17
D-69121 Heidelberg, Germany
e-mail: springer@vax.ntp.springer.de
FAX number: x 49 6221 487625

Please indicate clearly which macro package you need and the journal for which your paper is intended.

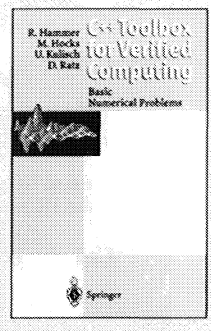
Use our LaTeX and plain-TeX macros to prepare your article for this and for other Springer journals.

Scientific Computing from Springer



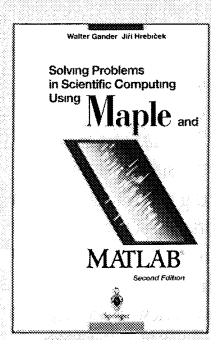
R. E. Crandall
Projects in Scientific Computation
1994. XXVI, 470 pages.
3 1/2″ DOS diskette.
Hardcover DM 98,–
ISBN 3-540-97808-9

This interdisciplinary senior/graduate level textbook provides a compendium of text, projects, problems and examples for readers to explore and solve in the field of scientific computing. The problem sets have been class-tested.
The book includes a 3.5 inch DOS-formatted floppy diskette which supports topic material in the text for use on a variety of computer systems.



R. Hammer, M. Hocks, U. Kulisch, D. Ratz
C++ Toolbox for Verified Computing I
Basic Numerical Problems
1995. XVII, 377 pages.
29 figures.
Hardcover DM 128,–
ISBN 3-540-59110-9

This C++ Toolbox for Verified Computing presents an extensive set of sophisticated tools for solving basic numerical problems with verification of the results. It is the C++ edition of the *Numerical Toolbox for Verified Computing* which was based on the computer language PASCAL-XSC. The sources of the programs in this book are freely available via anonymous ftp. The book offers a general discussion on arithmetic and computational reliability, analytical mathematics and verification techniques, algorithms, and actual C++ implementations. In each chapter, examples, exercises, and numerical results demonstrate the application of the routines presented.



W. Gander, J. Hřebíček
Solving Problems in Scientific Computing Using Maple and MATLAB®
2nd, exp. ed. 1995.
XVI, 315 pages.
106 figures, 8 tables.
Softcover DM 68,–
ISBN 3-540-58746-2

Modern computing tools like Maple (symbolic computation) and MATLAB (a numeric computation and visualization program) make it possible to easily solve realistic nontrivial problems in scientific computing.
Students can be taught now real-life problems that they can actually solve using the new powerful software. They will improve their knowledge through learning by examples and they will learn how both systems, MATLAB and Maple, may be used to solve problems interactively. All programs can be obtained from a server at ETH Zürich.

B. Fortner
The Data Handbook
A Guide to Understanding the Organization and Visualization of Technical Data
2nd ed. 1995.
XXIX, 350 pages.
Hardcover DM 59,–
ISBN 0-387-94505-9

This "Handbook" was authored by Brand Fortner, one of the founders of Spyglass, and it was his experience in working with very large amounts of numerical data that provided the underpinnings for this work.
The second edition contains updated and corrected materials. A structured array of data sets is also available online via the TELOS Web site, www.telospub.com, which provides users with direct digital access to information they might need in working through the book.

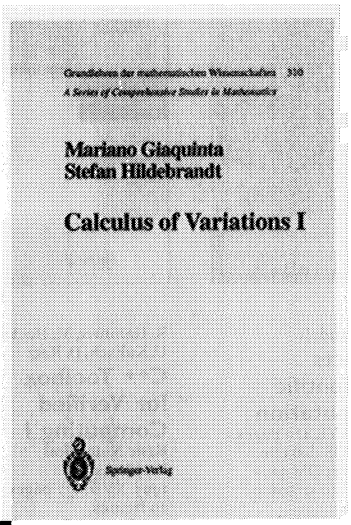
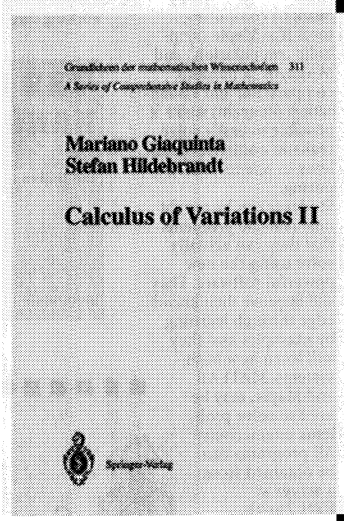
Calculus of Variations: The standard reference work

This long-awaited book by two of the foremost researchers and writers in the field is the first part of a treatise that will cover the subject in breadth and depth, paying special attention to the historical origins. A variety of aids to the reader are provided: an introduction to each chapter, section and subsection; an overview of the relevant literature (in Vol. 2) plus the references in the Scholia to each chapter, and in the bibliography; and finally an index of the examples used throughout the book.
Later volumes will deal with direct methods and regularity theory. Both individually and collectively these volumes will undoubtedly become standard references.



The Langrangian Formalism
1995. XXII, 350 pages. 73 figures.
Hardcover DM 188,–
ISBN 3-540-50625-X



The Hamiltonian Formalism
1995. Approx. 500 pages. 41 figures.
Hardcover DM 198,– ISBN 3-540-57961-3

Remaining 4 volumes to appear over the next few years.
