

Homology, Homotopy and Applications

Volume **7(1)**, 2005

1. Descent in Categories of (Co)Algebras Bachuki Mesablishvili	1–8
2. Product Structures on Four Dimensional Solvable Lie Algebras A. Andrada, M.L. Barberis, I.G. Dotti, and G.P. Ovando	9–37
3. Strict Modules and Homotopy Modules in Stable Homotopy Javier J. Gutiérrez	39–49
4. Homological Properties of Non-Deterministic Branchings and Mergings in Higher Dimensional Automata Phillipe Gaucher	51–76
5. The Complex of Words and Nakaoka Stability Moritz C. Kerz	77–85
6. More about the (Co)Homology of Groups and Associative Algebras Hvedri Inassaridze	87–108
7. Higher Monodromy Pietro Polesello and Ingo Waschkie	109–150
8. Extensions of Racks and Quandles Nicholas Jackson	151–167
9. Homotopy Actions, Cyclic Maps and Their Duals Martin Arkowitz and Gregory Lupton	169–184
10. What does the Classifying Space of a Category Classify? Michael Weiss	185–195
11. Matrices and Finite Quandles Benita Ho and Sam Nelson	197–208
