INDEX

U. Abresch & W. T. Meyer, *A Sphere theorem with a pinching constant below* $\frac{1}{4}$ 214

X. Chen, *Global asymptotic limit of solutions of the Cahn–Hilliard equation* 262

B. Chow & D.-H. Tsai, *Geometric expansion of convex plane curves* 312

S. K. Donaldson, *Symplectic submanifolds and almost-complex geometry* 666

B. Farb & R. Schwartz, *The large-scale geometry of Hilbert modular groups* 435

U. Hamenstädt, *Harmonic measures, Hausdorff measures and positive eigenfunctions* 1

M. Kapovich & J. J. Millson, *The symplectic geometry of polygons in Euclidean space* 479

J. M. Landsberg, *Differential-geometric characterizations of complete intersections* 32

G. Lawlor & F. Morgan, *Curvy slicing proves that triple junctions locally minimize area* 514

P. B. A. Lecomte & C. Roger, *Rigidité de l'algèbre de Lie des champs de vecteurs unimodulaires* 529

X.-S. Lin & Z. Wang, *Integral geometry of plane curves and knot invariants* 74

P. Malliavin & D. W. Stroock, *Short time behavior of the heat kernel and its logarithmic derivatives* 550

R. Matveyev, *A Decomposition of smooth simply-connected* $\mathbf{h}$*-cobordant 4-manifolds* 571

R. Mazzeo & F. Pacard, *A construction of singular solutions for a semilinear elliptic equation using asymptotic analysis* 331

W. T. Meyer, *See* U. Abresch & W. T. Meyer, 214

G. Mikhalkin & M. Polyak, *Whitney formula in higher dimensions* 583

J. J. Millson, *See* M. Kapovich & J. J. Millson, 479

F. Morgan, *See* G. Lawlor & F. Morgan 514

J. W. Morgan, Z. Szabó & C. H. Taubes, *A product formula for the Seiberg-Witten invariants and the generalized Thom conjecture* 706

W. Müller, *On the* $\mathbf{L}^2$*-index of Dirac operators on manifolds with corners of codimension two. I* 97

F. Pacard, *See* R. Mazzeo & F. Pacard 331

P. Papasoglu , *On the asymptotic cone of groups satisfying a quadratic isoperimetric inequality* 789

T. H. Parker, *Bubble tree convergence for harmonic maps curvature flow* 595
M. Polyak, *See* G. Mikhalkin & M. Polyak 583
C. Roger, *See* P. B. A. Lecomte & C. Roger 529
A. Ros & H. Rosenberg, *Constant mean curvature surfaces in a half-space of* $\mathbf{R}^3$ *with boundary in the boundary of the half-space* 807
H. Rosenberg, *See* A. Ros & H. Rosenberg 807
R. Schwartz, *See* B. Farb & R. Schwartz 435
A. Stone, *A boundary regularity theorem for mean curvature flow* 371
D. W. Stroock, *See* P. Malliavin & D. W. Stroock 550
Z. Szabó, *See* J. W. Morgan, Z. Szabó & C. H. Taubes 706
C. H. Taubes, *Counting pseudo-holomorphic submanifolds in dimension 4* 818
C. H. Taubes, *See* J. W. Morgan, Z. Szabó & C. H. Taubes 706
Y. Tian, *The Atiyah-Jones conjecture for classical groups and Bott periodicity* 178
D.-H. Tsai, *See* B. Chow & D.-H. Tsai 312
C. Voisin, *On a conjecture of Clemens on rational curves on hypersurfaces* 200
Z. Wang, *See* X.-S. Lin & Z. Wang 74
F. Wilhelm, *The radius rigidity theorem for manifolds of positive curvature* 634

INFORMATION FOR AUTHORS

Manuscripts

Manuscripts for publication should be sent to Vesselina Panteva, Department of Mathematics, Harvard University, Massachusetts, 02138, U.S.A. A separate cover letter should note if the paper is available as an electronic manuscript, and if so, in which format. Please provide your e-mail address if available.

Manuscripts should be written in English, French, German, or Italian, and should be typewritten, double spaced, with generous margins. Any paper written in a language other than English should include an abstract written in English. Diagrams should be drawn with black India ink on glossy white paper.

To eliminate unnecessary delay or difficulties in printing, authors may be guided by the article *Manual for authors of mathematical papers*, Bull. Amer. Math. Soc. **68** (1962) 429-444.

Footnotes, exept a possible acknowledgement of assistance or financial support on the first page, should be avoided by being incorporated into the text, perhaps parenthetically.

The list of references must be in alphabetical-chronological order; abbreviations of names of journals and references to books should follow the standard form established by Mathematical Reviews. The following references are typical examples:

[1] L. Lorch, *The zeros of the third derivative of Bessel functions of orders less than one*, Methods and Applications of Analysis **2** (1995) 147-159.

[2] C. Taubes, *Floer cohomology,* Monographs on Geometry and Topology, International Press, 1996.

Proofs

Authors receive only one set of proofs for corrections and will be responsible for the expense of making excessive alternations of the original manuscripts during the proofreading.

Offprints

One hundred offprints are supplied free for each article. In the case of multiple authors, the 100 free offprints will be divided equally among the authors. Additional offprints may be purchased at a reasonable cost.

Electronically Prepared Manuscripts

The Editors of the *Journal of Differential Geometry* encourage contributors to submit electronically prepared manuscripts in $\mathcal{A}\mathcal{M}\mathcal{S}$-LaTeXor LaTeX2e, with the following specifications:

11 point type size
text width 4.7 inches
text height 7.5 inches
the document class is book
q.e.d. is the end of proof convention

Properly prepared manuscripts save authors and editors proofreading time, expediting production.

Electronic manuscripts may be requested (if available) after a paper has been submitted.

Direct all questions regarding the electronic format of the accepted papers to Marina Lazarenko (e-mail address: jdg@math.harvard.edu).
