FORWARD

The Department of Mathematics of the Tokyo Institute of Technology will distribute the KODAI MATHEMATICAL SEMINAR REPORTS, which is devoted to mathematics, pure and applied. Because of printing difficulties at the present time we shall print papers, more or less, in abstract and preliminary forms so that we wish to reserve the right of publishing complete papers elsewhere. Inasmuch as copies are extremely limited in number, we should like to have our REPORTS considered as a sort of private communications to the mathematical circles.

The Editors
