

CONTENTS

A – ALGEBRA AND NUMBER THEORY

J. Almeida, <i>Minimal non-permutative pseudovarieties of semigroups. I</i>	257
J. Almeida, <i>Minimal non-permutative pseudovarieties of semigroups. II</i>	271
H. A. Keller, <i>On valued, complete fields and their automorphisms</i>	397
D. W. Masser and P. Shiu, <i>On sparsely totient numbers</i>	407

B – ANALYSIS

Z. Ditzian, <i>Inverse theorems for multidimensional Bernstein operators</i>	293
M. Furi and M. P. Pera, <i>A continuation principle for forced oscillations on differentiable manifolds</i>	321
H. Hecht and D. Miličić, <i>Character identities and asymptotic behavior of matrix coefficients of discrete series</i>	357
P. Jakóbczak, <i>The boundary regularity of the solution of the $\bar{\partial}$-equation in the product of strictly pseudoconvex domains</i>	371
K. Jarosz, <i>Isometries between injective tensor products of Banach spaces</i>	383
T. J. Ransford, <i>The spectrum of an interpolated operator and analytic multivalued functions</i>	445
A. Uchiyama, <i>On the radial maximal function of distributions</i>	467
J.-M. Wu, <i>On singularity of harmonic measure in space</i>	485

D – GEOMETRY

C. Andradas and J. M. Gamboa, <i>On projections of real algebraic varieties</i>	281
J. J. Hebda, <i>The collars of a Riemannian manifold and stable isosystolic inequalities</i>	339

G – TOPOLOGY

T. B. Ng, <i>Vector bundles over $(8k + 3)$-dimensional manifolds</i>	427
--	-----

Our subject classifications are: A – ALGEBRA AND NUMBER THEORY; B – ANALYSIS;
C – APPLIED MATHEMATICS; D – GEOMETRY; E – LOGIC AND FOUNDATIONS;
F – PROBABILITY AND STATISTICS; G – TOPOLOGY; H – COMBINATORICS
