

CONTENTS

A – ALGEBRA AND NUMBER THEORY

J. D. O’Neill, <i>Direct summands of direct products of slender modules</i>	379
H. P. Sankappanavar, <i>Heyting algebras with dual pseudocomplementation</i>	405

B – ANALYSIS

B. A. Barnes, <i>Algebraic elements of a Banach algebra modulo an ideal</i>	219
T. Husain, <i>Orthogonal primitive idempotents and Banach algebras isomorphic with l_2</i>	313
B. Muckenhoupt, <i>Weighted reverse weak type inequalities for the Hardy-Littlewood maximal function</i>	371
F. J. Ruiz, <i>A unified approach to Carleson measures and A_p weights</i>	397
A. Sinclair, <i>Strong Carleman and strong uniform approximation</i>	417
M. Suzuki, <i>The generalized Schwarz lemma for the Bergman metric</i>	429
B. Thorpe and L. Tomm, <i>Universal approximation by regular weighted means</i>	443

D – GEOMETRY

H. D. Fegan and P. Gilkey, <i>Invariants of the heat equation</i>	233
G. M. Lieberman, <i>Regularized distance and its applications</i>	329

E – LOGIC AND FOUNDATIONS

A. Rapp, <i>Elimination of Malitz quantifiers in stable theories</i>	387
--	-----

G – TOPOLOGY

R. W. Bagley, T. S. Wu and J. S. Yang, <i>On a class of topological groups more general than SIN groups</i>	209
E. Flapan, <i>Necessary and sufficient conditions for certain homology 3-spheres to have smooth \mathbf{Z}_p-actions</i>	255
P. R. Heath, <i>Product formulae for Nielsen numbers of fibre maps</i>	267
W. Menasco, <i>Determining incompressibility of surfaces in alternating knot and link complements</i>	353

H – COMBINATORICS

D. F. Hsu and A. D. Keedwell, <i>Generalized complete mappings, neofields, sequenceable groups and block designs. II</i>	291
--	-----

Our subject classifications are: A – ALGEBRA AND NUMBER THEORY; B – ANALYSIS;
C – APPLIED MATHEMATICS; D – GEOMETRY; E – LOGIC AND FOUNDATIONS;
F – PROBABILITY AND STATISTICS; G – TOPOLOGY; H – COMBINATORICS
