

THE ROCKY MOUNTAIN
JOURNAL OF MATHEMATICS

Volume 2

Winter 1972

Number 1

CONTENTS

| | |
|--|-----|
| A closure property of regressive isols By MATTHEW J. HASSETT | 1 |
| Remarks on homological dimensions By JOHN C. NICHOLS | 25 |
| $\lambda(n)$ -convex functions By RONALD M. MATHSEN | 31 |
| The ideal transform in a generalized Krull domain By ELBERT M. PIRTLE | 45 |
| Lambert series, false theta functions, and partitions By GEORGE E. ANDREWS | 49 |
| Perturbation and approximation theory for higher-order abstract Cauchy problems By L. BOBISUD AND R. HERSH | 57 |
| Spectral representation of self adjoint extensions of a symmetric operator By RICHARD C. GILBERT | 75 |
| Principal submatrices. VIII. Principal sections of a pair of forms By R.C. THOMPSON | 97 |
| Generating sets for a field as a ring extension of a subfield By ROBERT GILMER | 111 |
| Calculus of variations in complex vector bundles By ALFRED GRAY | 119 |
| A test for temporal independence for partially homogeneous Gaussian random fields By HERBERT T. DAVIS | 131 |
| Direct sums of countable groups By M. BILLS | 139 |
| Some counterexamples involving selfadjoint operators By JEROME A. GOLDSTEIN | 143 |
| On the Hurwitz zeta-function By BRUCE C. BERNDT | 151 |
