

CONTENTS

D. D. Bainov and S. D. Milsheva: Justification of partially-multiplicative averaging for a class of functional-differential equations with variable structure and impulses	1
Toshiyasu Arai: A subsystem of classical analysis proper Takeuti's reduction method for Π_1^1 -analysis	21
James E. Baumgartner: Bases for Aronszajn trees.....	31
Moto-o Takahashi: On the concrete construction of hyperbolic structure of 3-manifolds.....	41
Hirokazu Iwashita: Scattering theory for wave equations with long-range perturbations	85
Takuo Miwa: A characterization of absolute neighborhood retracts in general spaces	113
Hiroyuki Tasaki: Certain minimal or homologically volume minimizing submanifolds in compact symmetric spaces.....	117
Jerzy Nehring and Andrzej Skowroński: On representation-finite algebras whose Auslander-Reiten quiver contains a stable complete slice	133
Hisao Kato: Scalene metric spaces	143
Kenji Nagasaka: Weakly uniform distributions mod m for certain recursive sequences and for monomial sequences	159
Masami Sakai: Cardinal functions of spaces with ortho-bases	167
Takayoshi Wakamatsu: Partial Coxeter functors and stable equivalences for selfinjective algebras	171
Katsuya Mashimo: Homogeneous totally real submanifolds of S^n	185
