Preface v

1 Introduction to Spatial Point Patterns 1
- 1.1 What are spatial data? . . . 1
- 1.2 Principles of Bayesian inference . . . 4
- 1.3 Hierarchical modeling . . . 10
  - 1.3.1 What are hierarchical models? . . . 10
  - 1.3.2 A collection of examples . . . 11
- 1.4 Gaussian processes . . . 16

2 Theory for Spatial Point Patterns 19
- 2.1 Theory for spatial point patterns . . . 19
  - 2.1.1 The basics . . . 23
  - 2.1.2 A bit more theory . . . 25
- 2.2 Exploratory tools . . . 26
- 2.3 Modeling $\lambda(\mathbf{s})$ . . . 29
- 2.4 General Cox processes . . . 30
- 2.5 Inhibition processes . . . 31
- 2.6 Marked point processes . . . 32

3 Bayesian Inference for Point Patterns 35
- 3.1 A general inference approach . . . 35
  - 3.1.1 Campbell's Theorem and the GNZ result . . . 38
  - 3.1.2 An iterated expectation version . . . 40
- 3.2 Model adequacy and model comparison . . . 41
  - 3.2.1 Model adequacy through empirical coverage . . . 41
  - 3.2.2 Model comparison . . . 43
  - 3.2.3 Bayesian edge correction . . . 44

4 Bayesian Computation for Point Patterns 49
- 4.1 Simulating point patterns . . . 49
  - 4.1.1 Homogeneous Poisson Process (HPP) . . . 49
  - 4.1.2 Nonhomogeneous Poisson Process (NHPP) . . . 49
  - 4.1.3 Log Gaussian Cox Process (LGCP) . . . 50
  - 4.1.4 Cluster Processes . . . 51
  - 4.1.5 Gibbs Process . . . 52
  - 4.1.6 Marked point patterns . . . 55
  - 4.1.7 Other considerations for constructing and simulating point patterns . . . 56
- 4.2 Computation strategies for Bayesian model fitting . . . 60
  - 4.2.1 General comments on model fitting . . . 61
  - 4.2.2 Bayesian computational strategies for log Gaussian Cox processes . . . 61
  - 4.2.3 Application: Modeling earthquake epicenters with a LGCP . . . 69

4.2.4 Bayesian fitting of Gibbs processes . . . 74
4.3 Computational strategies for inhibition and clustering processes . . . 77
4.3.1 Approximate Bayesian Computation for repulsive point processes . . . 78
4.3.2 Explicit specification of an ABC algorithm . . . 79
4.3.3 Neyman Scott process and shot noise processes . . . 81

5 Special Topics in Point Pattern Analysis 83
5.1 Spatial modeling of presence-only data . . . 84
5.1.1 A few initial words on presence/absence data . . . 84
5.1.2 Review of presence-only data approaches . . . 85
5.1.3 Modeling details . . . 87
5.2 Spatial modeling for presence/absence data using preferential sampling 90
5.2.1 Some presence/absence modeling details . . . 90
5.2.2 What does "probability of presence" mean? . . . 93
5.2.3 Preferential sampling . . . 95
5.2.4 Fusing presence/absence and presence-only data . . . 97
5.3 Multivariate point patterns . . . 98
5.3.1 Introduction . . . 98
5.3.2 Summary statistics and statistical tests for multivariate point patterns . . . 99
5.3.3 Multivariate Gibbs processes . . . 100
5.3.4 Multivariate Log Gaussian Cox Process . . . 103
5.3.5 Application: Multivariate spatial point pattern of tree species in Duke Forest . . . 106
