LECTURE NOTES - MONOGRAPH SERIES

Shanti S. Gupta, Series Editor

Volume 7

Approximate Computation of Expectations

Charles Stein

Stanford University

**Institute of Mathematical Statistics
Hayward, California**

Institute of Mathematical Statistics
Lecture Notes–Monograph Series
Series Editor, Shanti S. Gupta, Purdue University

The production of the IMS Lecture Notes–Monograph Series
is managed by the IMS Business Office: Nicholas P. Jewell,
Treasurer, and Jose L. Gonzalez, Business Manager.

Library of Congress Catalog Card Number: 86–83372

International Standard Book Number 0–940600–08–0

TABLE OF CONTENTS

Introduction	1
I. The basic approach	9
II. Continuation of the basic idea	19
III. A normal approximation theorem	33
IV. The number of ones in the binary expansion of a random integer	43
V. Heuristic treatment of large deviations	53
VI. Sums of independent random variables with densities	59
VII. Counting Latin rectangles	69
VIII. Poisson approximations	81
IX. Sums of independent identically distributed random variables	95
X. Another abstract normal approximation theorem	105
XI. Improved results on the number of Latin rectangles	111
XII. Random allocations	125
XIII. An application to the theory of random graphs	137
XIV. A third abstract normal approximation theorem	145
XV. Summary	153
Bibliography	161
