Part I Lectures on Dunkl Operators

1	Prologue	3
2	Dunkl operators in the trigonometric setting	5
2.1	Notation	5
2.2	Dunkl-Cherednik operator	6
2.3	Commutativity	8
3	Degenerate double affine Hecke algebra	11
3.1	Affine Weyl group	11
3.2	Hecke algebra	13
4	Intertwiners	16
4.1	Intertwining elements in the degenerate double affine Hecke algebra .	16
4.2	Applications of affine intertwiners	17
4.2.1	Evaluation at the identity element	18
4.2.2	Jack Polynomials	19
5	The shift principle	20
5.1	Translation symmetry in the multiplicity parameter	20
5.2	Another reflection symmetry and application	26
6	Away from polynomials	29
6.1	Harish-Chandra series	29
6.2	Monodromy	34
6.3	The hypergeometric function	37
7	The KZ connection	39
7.1	Non-symmetric hypergeometric functions	39
7.2	The role of the Knizhnik-Zamolodchikov connection	43
8	Harmonic Analysis on A	46
8.1	Paley-Wiener theorem	46
8.2	Inversion and Plancherel formula	47
9	The attractive case (Residue Calculus)	51
9.1	Paley-Wiener theorem and Plancherel theorem	51
9.2	Residues	53
9.3	The arrangement of shifted root hyperplanes	55

Part II Complex Reflection Groups and Fake Degrees

1	Introduction	65
2	Minimal polynomial realization	68
3	Knizhnik-Zamolodchikov equations	71
4	Symmetries of fake degrees	78
5	Coxeter-like presentation of W	79
6	Cyclotomic Hecke algebras and monodromy	80
7	Applications	83
