Contents

Chapter 1. Fourier transforms on the hyperbolic space 11
1. Basic geometry in the hyperbolic space 11
2. Besov type spaces 14
3. 1-dimensional problem 18
4. The upper-half space model 28
5. Modified Radon transform 37
6. Radon transform and the wave equation 41

Chapter 2. Perturbation of the metric 47
1. Preliminaries from elliptic partial differential equations 47
2. Basic spectral properties for Laplace-Belrami operators on $\mathbf{H}^n$ 53
3. Growth order of solutions to reduced wave equations 62
4. Abstract theory for spectral representations 68
5. Examples of spectral representations 79
6. Geometric S-matrix 82
7. Helmholtz equation and geometric S-matrix 84
8. Modified Radon transform 88

Chapter 3. Manifolds with hyperbolic ends 95
1. Classification of 2-dimensional hyperbolic manifolds 95
2. Model space 97
3. Manifolds with hyperbolic ends 101
4. Cusps and generalized eigenfunctions 123
5. $SL(2, \mathbf{Z})\backslash\mathbf{H}^2$ as a Riemann surface 133

Chapter 4. Radon transform and propagation of singularities in $\mathbf{H}^n$ 139
1. Geodesic coordinates near infinity 139
2. Asymptotic solutions to the wave equation 144
3. Mellin transform and pseudo-differential operators 146
4. Parametrices and regularizers 149
5. Singularity expansion of the Radon transform 158

Chapter 5. Introduction to inverse scattering 161
1. Local problem on $\mathbf{H}^n$ 161
2. Scattering operator and N-D map 161
3. Boundary spectral projection 165
4. Inverse problems for hyperbolic ends 167

Chapter 6. Boundary control method 173
1. Brief introduction to the boundary control method 173
2. Blagovestchenskii idenitity 175

3. Geodesics 177
4. Controllabilty and observability 178
5. Topological reconstruction of $\mathcal{N}$ by $R(\mathcal{N})$ 184
6. Boundary cut locus 185
7. Boundary distance coordinates 195
8. Reconstruction of $R(\mathcal{N})$ from BSP 198
9. Wave fronts and $R(\mathcal{N})$ 200
10. Propagation of singularities and $R(\mathcal{N})$ 202
11. Eigenfunction coordinates 203

Appendix A. Radon transform and propagation of singularities in $\mathbf{R}^n$ 207
1. Fourier and Radon transforms for perturbed metric 208
2. Asymptotic solutions 214
3. Fourier integral operators and functional calculus 219
4. Parametrices and regularizers 222
5. Propagation of singularities 228
6. Singular support theorem 236

Appendix. Bibliography 247
