

References

The list of references is not an attempt at a complete bibliography of general recursion theory but contains only items referred to in the main body of the text. For an extensive bibliography of recursion theory up to the mid 1960's see Rogers [136]. An "uncritical bibliography" of generalized recursion theory up to the early 1970's can be found in Fenstad-Hinman [31]. There is also useful bibliographic information in the **Handbook** [12], in particular, Shore [152] for α -recursion theory. For degree theory in ORT see the bibliography in Soare [157]. The books Barwise [11] and Hinman [61] contain much supplementary bibliographic information on admissible sets and structures and on recursion theoretic hierarchies. Moschovakis [118] has an extensive bibliography of descriptive set theory. One may also consult various proceedings' volumes such as Gandy-Yates [44] and Fenstad-Gandy-Sacks [30] for additional references.
