0. Introduction	1
1. Group presentations	2
1.1. Notation	2
1.2. Generating sets	2
1.3. Free groups	5
1.4. Construction of free groups	7
1.5. Group presentations	10
1.6. Abelianisations	12
2. Cayley graphs	13
2.1. Basic terminology and notation	13
2.2. Graphs viewed as metric and topological spaces	14
2.3. Graphs associated to groups	15
3. Quasi-isometries	22
3.1. Metric spaces	22
3.2. Isometries	25
3.3. Definition of quasi-isometries	26
3.4. Cayley graphs again	32
3.5. A useful construction	34
3.6. Quasi-isometry and commensurability	35
3.7. Quasi-isometry invariants	39
4. Fundamental groups	40
4.1. Definition of fundamental groups	40
4.2. Covering spaces	44
4.3. Applications to free groups	46

5. Hyperbolic geometry	49
5.1. The hyperbolic plane	49
5.2. Some properties of the hyperbolic plane	52
5.3. Tessellations of \mathbf{H}^2	53
5.4. Surfaces	54
5.5. 3-dimensional hyperbolic geometry	58
6. Hyperbolic groups	61
6.1. Definition of a hyperbolic space	61
6.2. Basic properties	63
6.3. Projections	67
6.4. Trees in hyperbolic spaces	69
6.5. The four-point condition	72
6.6. Exponential growth of distances	75
6.7. Quasigeodesics	77
6.8. Hausdorff distances	80
6.9. Quasi-isometry invariance of hyperbolicity	80
6.10. Hyperbolic groups	82
6.11. Some properties of hyperbolic groups	83
7. Notes	89
References	95
