

CONTENTS

John ABBOTT and Anna Maria BIGATTI — Gröbner bases for everyone with CoCoA-5 and CoCoALib	1
Bruno BUCHBERGER — Gröbner bases computation by triangularizing Macaulay matrices	25
Mathias DRTON — Algebraic problems in structural equation modeling	35
Claudia FASSINO, Hans Michael MÖLLER and Eva RICCOMAGNO — BM algorithms for noisy data and implicit regression modelling	87
Elizabeth GROSS, Sonja PETROVIĆ, Donald RICHARDS and Despina STASI — The multiple roots phenomenon in maximum likelihood estimation for factor analysis	109
Akihiro HIGASHITANI and Kyouko KIMURA — A necessary condition for an edge ring to satisfy Serre's condition (S_2)	121
Christopher J. HILLAR, Robert KRONE and Anton LEYKIN — Equivariant Gröbner bases	129
Florian KOHL, Yanxi LI, Johannes RAUH and Ruriko YOSHIDA — Semigroups – A computational approach	155
Nicolette MESHKAT, Zvi ROSEN and Seth SULLIVANT — Algebraic tools for the analysis of state space models	171
Mateusz MICHAŁEK — Selected topics on toric varieties	207
Toshinori OAKU — Algorithms for D -modules, integration, and generalized functions with applications to statistics	253
Toshinori OAKU — Localization, local cohomology, and the b -function of a D -module with respect to a polynomial	353
Tran Nam TRUNG — A characterization of Gorenstein planar graphs	399
Raimundas VIDUNAS and Akimichi TAKEMURA — Differential relations for the largest root distribution of complex non-central Wishart matrices	411
