Preface iii

Notational Explanations ix

Introduction 1

I. Formal Systems and Formal Reasoning 6

1. Definition of a Formal System 6
2. An Example from Group Theory 8
3. Representation and Interpretation 9
4. Some Semiotical Concepts. The U-Language 11
5. An Attempt at Mathematical Grammatics 12
6. Semiotical Aspect of a Formal System. The A-Language 17
7. Modifications of a Formal System 19
8. The System $\mathfrak{G}$ 21

II. The Finite Positive Connectives 24

1. Preliminary Definitions and Notation 24
2. Informal Discussion 25
3. Classical Form of the Rules 28
4. The Systems LA($\mathfrak{G}$) and LC($\mathfrak{G}$) 29
5. Some Preliminary Theorems 34
6. The Technique of Elementary Derivations. Decidability 39
7. The Elimination Theorem 45
8. The Natural System T 49
9. Equivalent Propositional Algebras. Systems HA and HC 61
10. Concluding Remarks 63

III. Quantifiers 65

1. Preliminary Analysis 65
2. Conventions of the B-Language 66
3. Rules for Terms and Propositions 69
4. The Systems LA* and LC*. 73
5. Theorems on Extensions 74
6. Basic Theorems of the LA* and LC* Systems 79
7. The Systems TA*, TC*. 83
8. The Predicate Calculus 86

IV. Negation 90

1. Preliminary Analysis 90

IV. Negation (Continued)
2. An Example from Number Theory 92
3. Formulation of the Rules 93
4. Fundamental Theorems 96
5. The Natural Systems T 99
6. The Propositional Algebras 106
7. Concluding Remarks 110

V. Modalities 112

1. Analysis of Necessity 112
2. The L-System for Necessity 113
3. The T and H Systems for Necessity 116
4. Discussion of Possibility 119

Bibliography 123
