

CONTENTS

Preface	(vi)
List of Symbols	(viii)
0. BY WAY OF INTRODUCTION	1
A. Homogeneous isotropic diffusion	1
B. Chemical reaction	6
C. Superposition of diffusion and reaction	9
D. Superposition of semigroups	13
E. Comments on the Feynman integral	20
F. Stieltjes integral	23
G. A general outline of the approach	24
1. PRELIMINARIES, NOTATION, CONVENTIONS	29
A. Summation of sequences	29
B. Continuous linear maps	31
C. Tensor products	34
D. Families of sets and functions	37
E. Additive set functions	40
F. Countably additive set functions	43
G. Young functions	47
2. INTEGRATING GAUGES	50
A. Integrable functions	51
B. Negligible sets and functions	54
C. Spaces of integrable functions	56
D. Integrating gauges	57
E. Daniell integrals	61
F. Constructions of integrating gauges	64
G. Vector lattices	66
H. Direct sums of integrating gauges	69
J. Very sub-additive regular gauges	71
K. Functions of integrating gauges	73

3.	INTEGRALS	77
	A. The definition	77
	B. Classical measures	80
	C. Orlicz spaces	85
	D. Sobolev spaces	92
	E. Hardy spaces	94
	F. Vector measures	99
	G. Stieltjes integrals	103
4.	SET FUNCTIONS	107
	A. Generalized variations	107
	B. Estimation by a measure	112
	C. Spaces of integrable functions	116
	D. Conditions for integrability	121
	E. Indeficient set functions	124
	F. Conditions for indeficiency	130
	G. Scalar valued set functions	134
	H. Examples	136
	J. Spaces of set functions	138
	K. Φ -scattered set functions	142
5.	VECTOR VALUED FUNCTIONS AND PRODUCTS	145
	A. Bochner integrable functions	145
	B. The bilinear integral	148
	C. Products of integrating gauges	150
	D. Tensor products	152
	E. The Fubini theorem	155
	F. The Tonelli theorem	157
6.	SCALAR OPERATORS	160
	A. Spectral set functions	161
	B. Negligible sets and functions	164
	C. Integration	166
	D. Closable spectral set functions	169
	E. Scalar operators	171
	F. The Fourier multipliers	174
	G. The Stone theorem	176

7. SUPERPOSITION OF EVOLUTIONS	181
A. The set-up	181
B. The Feynman-Kac formula	185
C. Dynamical systems	189
D. The Poisson semigroup	193
E. The Schrödinger group	196
References	201
Index	205
