

# Very Large Graphs

László Lovász\*

*Dedicated to the memory of Oded Schramm*

## CONTENTS

1. Introduction	69
1.1. Huge networks	69
1.2. What to ask about them?	70
1.3. How to obtain information about them?	71
1.3.1. Local sampling	71
1.3.2. Observing global processes	72
1.3.3. Left and right homomorphisms	72
1.4. How to model them?	73
1.4.1. Random graphs	73
1.4.2. Randomly growing graphs	73
1.4.3. Quasirandom graphs	74
1.5. How to approximate them?	74
1.5.1. The distance of two graphs	75
1.5.2. Approximation by smaller: Regularity Lemma	75
1.5.3. Approximation by infinite: convergence and limits	76
1.5.4. Optimization problems for graphs	78
1.6. Mathematical tools	79
2. Graph parameters	79
2.1. Connection matrices and reflection positivity	79
2.2. Homomorphisms from the left	80
2.2.1. Versions of homomorphism numbers	80
2.2.2. Spectra	81
2.3. Homomorphisms to the right	81
2.3.1. Colorings and independent sets	81
2.3.2. Multicuts	81
2.3.3. Statistical physics	83
2.4. Homomorphisms densities in the sparse case	84
