

Table of Contents

0. Introduction	1
1. Preliminary results	5
1.1. Singularities of pairs	5
1.2. Finite morphisms and singularities of pairs	8
1.3. Log canonical covers	10
2. Inversion of adjunction	12
2.1. Two-dimensional toric singularities and log canonical singularities with a reduced boundary	12
2.2. Adjunction	14
2.3. Connectedness Lemma	19
3. Log terminal modifications	21
3.1. Log terminal modifications	21
3.2. Weighted blowups	24
3.3. Generalizations of Connectedness Lemma	25
4. Definition of complements and elementary properties	28
4.1. Introduction	28
4.2. Monotonicity	33
4.3. Birational properties of complements	35
4.4. Inductive properties of complements	35
4.5. Exceptionality	37
5. Log del Pezzo surfaces	40
5.1. Definitions and examples	40
5.2. Boundedness of log del Pezzos	41
5.3. On the existence of regular complements	42
5.4. Nonrational log del Pezzo surfaces	44
6. Birational contractions and two-dimensional log canonical singularities	46
6.1. Classification of two-dimensional log canonical singularities	47
6.2. Two-dimensional log terminal singularities as quotients	54
7. Contractions onto curves	58
7.1. Log conic bundles	58
7.2. Elliptic fibrations	65
8. Inductive complements	73
8.1. Examples	73
8.2. Nonrational case	74
8.3. The Main Inductive Theorem	77
8.4. Corollaries	87
8.5. Characterization of toric surfaces	90
