

## Table of Contents

### Preface

<b>Part 1</b>	<b>Analytic continuation of some zeta functions</b> by Gautami Bhowmik	<b>1</b>
<b>Part 2</b>	<b>Lectures on height zeta functions: At the confluence of algebraic geometry, algebraic number theory, and analysis</b> by Antoine Chambert-Loir	<b>17</b>
<b>Part 3</b>	<b>Spherical functions on <math>p</math>-adic homogeneous spaces</b> by Yumiko Hironaka	<b>50</b>
<b>Part 4</b>	<b>Poly-Bernoulli numbers and related zeta functions</b> by Masanobu Kaneko	<b>73</b>
<b>Part 5</b>	<b>Rankin-Selberg method and periods of modular forms</b> by Hidenori Katsurada	<b>86</b>
<b>Part 6</b>	<b>An introduction to the theory of zeta-functions of root systems</b> by Yasushi Komori, Kohji Matsumoto and Hirofumi Tsumura	<b>115</b>
<b>Part 7</b>	<b>An introduction to <math>p</math>-adic and motivic zeta functions and the monodromy conjecture</b> by Johannes Nicaise	<b>141</b>
<b>Part 8</b>	<b>Hypergeometric constructions of rational approximations for (multiple) zeta values</b> by Tanguy Rivoal	<b>167</b>
