Introduction	1
1 Overview	3
2 Projective Structures on Surfaces	9
2.1 Projective geometry	9
2.2 Projective structures	17
2.3 The Hilbert metric	28
3 Ratios and Configurations of Flags	35
3.1 Flags	35
3.2 Triple ratio	36
3.3 Cross ratio	36
3.4 Quadruple ratio	39
3.5 Pairs of convex polygons and configuration of flags	40
3.6 Inscribed triangles and triples of flags	40
3.7 Parametrisation of the spaces \mathcal{P}_3 and \mathcal{P}_4^*	41
4 The Parametrisation of the Moduli Space	46
4.1 Framing the ends	46
4.2 On horospheres at cusps and boundary components	47
4.3 Ideal triangulations of surfaces	50
4.4 The canonical bijection for positively framed structures	52
4.5 A natural action of the symmetric group	57
4.6 Duality	59
4.7 The canonical bijection for negatively framed structures	60
4.8 Cloverleaf position	62
5 Properties of the Parametrisation	64
5.1 Change of coordinates	64
5.2 Monodromy map	66
5.3 Maximal and minimal ends in coordinates	72
6 Applications of the Parametrisation	76
6.1 Structures of finite area	76
6.2 The classical Teichmüller space	81
6.3 Closed surfaces	83
6.4 A Poisson structure on the moduli space	85
