I Basics in Cluster Algebras	1
0 Introduction to Part I	3
1 Getting Started	5
1.1 The very first step: pentagon periodicity	5
1.2 Semifields	7
1.3 Matrix and quiver mutations	10
2 Basic Notions	16
2.1 Seeds and mutations	16
2.2 Cluster patterns and cluster algebras	22
2.3 Rank 2 periodicities	26
2.4 Free coefficients	32
3 Fundamental Results	35
3.1 Laurent phenomenon	35
3.2 Finite type classification	38
3.3 Cluster algebras of geometric type	42
3.4 Grassmannian $\text{Gr}(2, 5)$	46
4 Separation formulas	52
4.1 Principal coefficients	52
4.2 C - and G -matrices, and F -polynomials	53
4.3 Separation formulas	57
4.4 Further results	61
5 Upper cluster algebras	65
5.1 Upper cluster algebras	65
5.2 Rank 2 case	66
5.3 Alternative proof of Laurent phenomenon	70
5.4 Further results	73
6 Generalized cluster algebras	74
6.1 Generalized cluster algebras	74
6.2 Separation formulas for GCA	77
