

Table of Contents

Preface	VII
1. The Basics	1
1.1 Preliminaries and Notation	1
1.1.1 Elimination of Quantifiers	6
2. Constructing Models with Special Properties	11
2.1 Prime and Atomic Models	11
2.2 Saturated and Homogeneous Models	17
2.3 Countable Models of Complete Theories	35
2.4 Indiscernible Sequences	40
2.5 Skolem Functions	43
3. Uncountably Categorical and \aleph_0-stable Theories	49
3.1 Morley's Categoricity Theorem	49
3.2 A Universal Domain	70
3.3 Totally Transcendental Theories	72
3.4 The Baldwin-Lachlan Theorem	92
3.5 Introduction to ω -stable Groups	100
3.5.1 A Group Acting on a Strongly Minimal Set	114
3.5.2 \wedge -definable Groups and Actions	121
4. Fine Structure of Uncountably Categorical Theories	125
4.1 T^{eq}	126
4.1.1 Totally Transcendental Theories Revisited	131
4.1.2 D^{eq} for a Strongly Minimal D	136
4.2 The Pregeometries on Strongly Minimal Sets	138
4.2.1 Plane Curves	143
4.3 Global Geometrical Considerations	150
4.3.1 1-based Theories	159
4.3.2 1-based Groups	164
4.4 Automorphism Groups of Constructions	175
4.5 Defining a Group from a Pregeometry	192
4.5.1 Germs of Definable Functions	194
4.5.2 Getting a Group from an Algebraic Quadrangle	204
