Preface	v
Contributors	vi
List of publications	viii
Some reminiscences of my friendship with Herman Rubin <i>Herman Chernoff</i>	1
Evaluating improper priors and the recurrence of symmetric Markov chains: An overview <i>Morris L. Eaton</i>	5
Estimation in restricted parameter spaces: A review <i>Eric Marchand and William E. Strawderman</i>	21
A Rubinesque theory of decision <i>J. B. Kadane, Mark J. Schervish and Teddy Seidenfeld</i>	45
On the distribution of the greatest common divisor <i>Persi Diaconis and Paul Erdős</i>	56
Versions of de Finetti's Theorem with applications to damage models <i>C. R. Rao and D. N. Shanbhag</i>	62
A short history of stochastic integration and mathematical finance: The early years, 1880–1970 <i>Robert Jarrow and Philip Protter</i>	75
Non-linear filtering with Gaussian martingale noise: Kalman filter with fBm noise <i>L. Gawarecki and V. Mandrekar</i>	92
Self-similar processes, fractional Brownian motion and statistical inference <i>B.L.S. Prakasa Rao</i>	98
Some properties of the arc-sine law related to its invariance under a family of rational maps <i>Jim Pitman and Marc Yor</i>	126
On time changing continuous martingales to Brownian motion <i>Burgess Davis</i>	138
On counts of Bernoulli strings and connections to rank orders and random permutations <i>Jayaram Sethuraman and Sunder Sethuraman</i>	140
Chebyshev polynomials and G-distributed functions of F-distributed variables <i>Anirban DasGupta and L. Shepp</i>	153
Zeroes of infinitely differentiable characteristic functions <i>Herman Rubin and Thomas M. Sellke</i>	164
On the characteristic function of Pearson type IV distributions <i>Wei-Liem Loh</i>	171
Characterizations, Sub and resampling, and goodness of fit <i>L. Brown, Anirban DasGupta, John Marden and Dimitris Politis</i>	180

Notes on the bias-variance trade-off phenomenon <i>Jeesen Chen</i>	207
Combining correlated unbiased estimators of the mean of a normal distribution <i>Timothy Keller and Ingram Olkin</i>	218
An asymptotic minimax determination of the initial sample size in a two-stage sequential procedure <i>Michael Woodroofe</i>	228
Estimating gradient trees <i>Ming-Yen Cheng, Peter Hall and John A. Hartigan</i>	237
Conservative bounds on extreme P-values for testing the equality of two probabilities based on very large sample sizes <i>Herman Chernoff</i>	250
Detecting a target in very noisy data from multiple looks <i>Jiashun Jin</i>	255
r-scan extremal statistics of inhomogeneous Poisson processes <i>Samuel Karlin and Chingfer Chen</i>	287
On the strong consistency, weak limits and practical performance of the ML estimate and Bayesian estimates of a symmetric domain in R^k <i>Wen-Chi Tsai and Anirban DasGupta</i>	291
Maximum likelihood estimation for the contact process <i>Marta Fiocco and Willem R. van Zwet</i>	309
On the “Poisson boundaries” of the family of weighted Kolmogorov statistics <i>Leah Jager and Jon A. Wellner</i>	319
A theorem on compatibility of systems of sets with applications <i>A. Goswami and B.V. Rao</i>	332
A question of geometry and probability <i>Richard A. Vitale</i>	337
Generalized Accept–Reject sampling schemes <i>George Casella, Christian P. Robert and Martin T. Wells</i>	342
Scalable mining for classification rules in relational databases <i>Min Wang, Bala Iyer and Jeffrey Scott Vitter</i>	348
A simple proof of a condition for cointegration <i>T. W. Anderson</i>	378
Forecasting NBA basketball playoff outcomes using the weighted likelihood <i>Feifang Hu and James V. Zidek</i>	385
Distributions of failure times associated with non-homogeneous compound Poisson damage processes <i>S. Zacks</i>	396
Conversations with Herman Rubin <i>Mary Ellen Bock</i>	408
