CONTENTS OF VOLUME 14

Special Invited Papers, Memorial Articles and Articles

AARONSON, JON. Random f-expansions 1037–1057

ADLER, ROBERT J. AND BROWN, LAWRENCE D. Tail behaviour for suprema of empirical processes 1–30

ALEXANDER, KENNETH S. Sample moduli for set-indexed Gaussian processes 598–611

ALEXANDER, KENNETH S. AND PYKE, RONALD. A uniform central limit theorem for set-indexed partial-sum processes with finite variance 582–597

ATKINSON, BRUCE W. Two-sided Markov chains 459–479

BARRON, ANDREW R. Entropy and the central limit theorem ... 336–342

BASS, R. F. AND CRANSTON, M. The Malliavin calculus for pure jump processes and applications to local time 490–532

BAXENDALE, PETER AND HARRIS, THEODORE E. Isotropic stochastic flows 1155–1179

BERK, ROBERT H. Sphericity and the normal law 696–701

BRENNAN, MICHAEL D. AND DURRETT, RICHARD. Splitting intervals 1024–1036

BROWN, LAWRENCE D. AND ADLER, ROBERT J. Tail behaviour for suprema of empirical processes 1–30

BROX, TH. A one-dimensional diffusion process in a Wiener medium 1206–1218

BURTON, JR., ROBERT M. AND WAYMIRE, ED. A sufficient condition for association of a renewal process 1272–1276

BYCZKOWSKI, T. AND SAMOTIJ, K. Absolute continuity of stable seminorms 299–312

CARLSTEIN, EDWARD. Asymptotic normality for a general statistic from a stationary sequence 1371–1379

CERRITO, P. B. Recurrence of random walks on completely simple semigroups 1411–1417

CHOW, YUAN SHIH AND ZHANG, CUN-HUI. A note on Feller's strong law of large numbers 1088–1094

COHEN, JOEL E. A life of the immeasurable mind. A review of *Enigmas of Chance, An Autobiography* by Mark Kac 1139–1148

COX, J. THEODORE AND GRIFFEATH, DAVID. Diffusive clustering in the two dimensional voter model 347–370

CRANSTON, M. AND BASS, R. F. The Malliavin calculus for pure jump processes and applications to local time 490–532

CSÁKI, E. AND FÖLDES, A. How small are the increments of the local time of a Wiener process? 533–546

CSÖRGŐ, MIKLÓS, CSÖRGŐ, SÁNDOR, HORVÁTH, LAJOS, AND MASON, DAVID M. Weighted empirical and quantile processes 31–85

CSÖRGŐ, MIKLÓS, CSÖRGŐ, SÁNDOR, HORVÁTH, LAJOS, AND

MASON, DAVID M. Normal and stable convergence of integral functions of the empirical distribution function 86–118
CSÖRGŐ, SÁNDOR, HORVÁTH, LAJOS, MASON, DAVID M., AND CSÖRGŐ, MIKLÓS. Weighted empirical and quantile processes 31–85
CSÖRGŐ, SÁNDOR, HORVÁTH, LAJOS, MASON, DAVID M., AND CSÖRGŐ, MIKLÓS. Normal and stable convergence of integral functions of the empirical distribution function 86–118
CSÖRGŐ, SÁNDOR AND MASON, DAVID M. The asymptotic distribution of sums of extreme values from a regularly varying distribution 974–983
DEHEUVELS, PAUL. On the influence of the extremes of an i.i.d. sequence on the maximal spacings 194–208
DEHEUVELS, PAUL, DEVROYE, LUC, AND LYNCH, JAMES. Exact convergence rate in the limit theorems of Erdős–Rényi and Shepp 209–223
DEHEUVELS, P. AND PFEIFER, D. A semigroup approach to Poisson approximation 663–676
DEHLING, HEROLD, DENKER, MANFRED, AND PHILIPP, WALTER. Central limit theorems for mixing sequences of random variables under minimal conditions 1359–1370
DENKER, MANFRED, PHILIPP, WALTER, AND DEHLING, HEROLD. Central limit theorems for mixing sequences of random variables under minimal conditions 1359–1370
DEVROYE, LUC, LYNCH, JAMES, AND DEHEUVELS, PAUL. Exact convergence rate in the limit theorems of Erdős–Rényi and Shepp 209–223
DE MASI, A., PRESUTTI, E., SPOHN, H., AND WICK, W. D. Asymptotic equivalence of fluctuation fields for reversible exclusion processes with speed change 409–423
DURRETT, RICHARD AND BRENNAN, MICHAEL D. Splitting intervals 1024–1036
EBERLEIN, ERNST. On strong invariance principles under dependence assumptions 260–270
ELLIOTT, ROBERT J. Reverse time differentiation and smoothing formulae for a finite state Markov process 480–489
FALK, M. AND KOHNE, W. On the rate at which the sample extremes become independent 1339–1346
FANCHAO, KONG, ZHENGYAN, LIN, AND GUIJING, CHEN. Answers to some questions about increments of a Wiener process 1252–1261
FARAHMAND, KAMBIZ. On the average number of real roots of a random algebraic equation 702–709
FERRARI, PABLO A. The simple exclusion process as seen from a tagged particle 1277–1290
FINE, TERRENCE L. AND PAPAMARCOU, ADRIANOS. A note on undominated lower probabilities 710–723
FÖLDES, A. AND CSÁKI, E. How small are the increments of the local time of a Wiener process? 533–546

GEMAN, STUART. The spectral radius of large random matrices . . 1318–1328
GINÉ, EVARIST AND ZINN, JOEL. Empirical processes indexed by Lipschitz functions 1329–1338
GLOVER, JOSEPH AND RAO, MURALI. Hunt's hypothesis (H) and Getoor's conjecture 1085–1087
GOLDIE, CHARLES M. AND GREENWOOD, PRISCILLA E. Characterisations of set-indexed Brownian motion and associated conditions for finite-dimensional convergence 802–816
GOLDIE, CHARLES M. AND GREENWOOD, PRISCILLA E. Variance of set-indexed sums of mixing random variables and weak convergence of set-indexed processes 817–839
GÖTZE, F. On the rate of convergence in the central limit theorem in Banach spaces 922–942
GRAY, LAWRENCE. Duality for general attractive spin systems with applications in one dimension 371–396
GREENWOOD, PRISCILLA E. AND GOLDIE, CHARLES M. Characterisations of set-indexed Brownian motion and associated conditions for finite-dimensional convergence 802–816
GREENWOOD, PRISCILLA E. AND GOLDIE, CHARLES M. Variance of set-indexed sums of mixing random variables and weak convergence of set-indexed processes 817–839
GRIFFEATH, DAVID AND COX, J. THEODORE. Diffusive clustering in the two dimensional voter model 347–370
GRIFFIN, PHILIP S. Matrix normalized sums of independent identically distributed random vectors 224–246
GUIJING, CHEN, FANCHAO, KONG, AND ZHENGYAN, LIN. Answers to some questions about increments of a Wiener process 1252–1261
GUT, ALLAN AND JANSON, SVANTE. Converse results for existence of moments and uniform integrability for stopped random walks 1296–1317
HALL, PETER. Clump counts in a mosaic 424–458
HARRIS, THEODORE E. AND BAXENDALE, PETER. Isotropic stochastic flows 1155–1179
HAUSSMANN, U. G. AND PARDOUX, E. Time reversal of diffusions 1188–1205
HEUNIS, ANDREW J. On the prevalence of stochastic differential equations with unique strong solutions 653–662
HOGAN, MICHAEL L. Comments on a problem of Chernoff and Petkau 1058–1063
HORVÁTH, LAJOS, MASON, DAVID M., CSÖRGŐ, MIKLÓS, AND CSÖRGŐ, SÁNDOR. Weighted empirical and quantile processes 31–85
HORVÁTH, LAJOS, MASON, DAVID M., CSÖRGŐ, MIKLÓS, AND CSÖRGŐ, SÁNDOR. Normal and stable convergence of integral functions of the empirical distribution function 86–118
HUDSON, WILLIAM N., JUREK, ZBIGNIEW J., AND VEEH, JERRY ALAN. The symmetry group and exponents of operator stable probability measures 1014–1023

IMKELLER, PETER. On changing time for two-parameter strong martingales: A counterexample 1080–1084
IYENGAR, SATISH. On a lower bound for the multivariate normal Mills' ratio 1399–1403
JAKUBOWSKI, ADAM. Principle of conditioning in limit theorems for sums of random variables 902–915
JAMMALAMADAKA, S. RAO AND JANSON, SVANTE. Limit theorems for a triangular scheme of U-statistics with applications to inter-point distances 1347–1358
JANSON, SVANTE AND GUT, ALLAN. Converse results for existence of moments and uniform integrability for stopped random walks 1296–1317
JANSON, SVANTE AND JAMMALAMADAKA, S. RAO. Limit theorems for a triangular scheme of U-statistics with applications to inter-point distances 1347–1358
JUREK, ZBIGNIEW J., VEEH, JERRY ALAN, AND HUDSON, WILLIAM N. The symmetry group and exponents of operator stable probability measures 1014–1023
KAC, MARK. Publications of Mark Kac 1149–1154
KESTEN, HARRY. The influence of Mark Kac on probability theory 1103–1128
KIPNIS, CLAUDE. Central limit theorems for infinite series of queues and applications to simple exclusion 397–408
KLASS, MICHAEL J., NAIR, VIJAYAN N., AND SHEPP, LAWRENCE A. On the number of crossings of empirical distribution functions 877–890
KOHNE, W. AND FALK, M. On the rate at which the sample extremes become independent 1339–1346
KOTELENEZ, PETER. Law of large numbers and central limit theorem for linear chemical reactions with diffusion 173–193
KRAKOWIAK, WIESŁAW AND SZULGA, JERZY. Random multilinear forms 955–973
LALLEY, S. P. Regenerative representation for one-dimensional Gibbs states 1262–1271
LALLEY, S. P. AND LORDEN, G. A control problem arising in the sequential design of experiments 136–172
LANDERS, DIETER AND ROGGE, LOTHAR. Second-order approximation in the conditional central limit theorem 313–325
LANDERS, D. AND ROGGE, L. An inequality for the Hausdorff-metric of σ-fields 724–730
LEDOUX, M. ET TALAGRAND, M. Conditions d'intégrabilité pour les multiplicateurs dans le TLC Banachique 916–921
LE GALL, JEAN-FRANÇOIS. Sur la saucisse de Wiener et les points multiples du mouvement Brownien 1219–1244
LINDVALL, TORGNY AND ROGERS, L. C. G. Coupling of multidimensional diffusions by reflection 860–872

LORDEN, G. AND LALLEY, S. P. A control problem arising in the sequential design of experiments 136–172
LYNCH, JAMES, DEHEUVELS, PAUL, AND DEVROYE, LUC. Exact convergence rate in the limit theorems of Erdős–Rényi and Shepp 209–223
MADRAS, NEAL. A process in a randomly fluctuating environment 119–135
MARCH, PETER. Brownian motion and harmonic functions on rotationally symmetric manifolds 793–801
MASON, DAVID M. AND CSÖRGŐ, SÁNDOR. The asymptotic distribution of sums of extreme values from a regularly varying distribution 974–983
MASON, DAVID M., CSÖRGŐ, MIKLÓS, CSÖRGŐ, SÁNDOR, AND HORVÁTH, LAJOS. Weighted empirical and quantile processes 31–85
MASON, DAVID M., CSÖRGŐ, MIKLÓS, CSÖRGŐ, SÁNDOR, AND HORVÁTH, LAJOS. Normal and stable convergence of integral functions of the empirical distribution function 86–118
MCCONNELL, TERRY R. AND TAQQU, MURAD S. Decoupling inequalities for multilinear forms in independent symmetric random variables 943–954
MERZBACH, ELY AND NUALART, DAVID. A characterization of the spatial Poisson process and changing time 1380–1390
NAIR, VIJAYAN N., SHEPP, LAWRENCE A., AND KLASS, MICHAEL J. On the number of crossings of empirical distribution functions 877–890
NUALART, DAVID AND MERZBACH, ELY. A characterization of the spatial Poisson process and changing time 1380–1390
PAPAMARCOU, ADRIANOS AND FINE, TERRENCE L. A note on undominated lower probabilities 710–723
PARDOUX, E. AND HAUSSMANN, U. G. Time reversal of diffusions 1188–1205
PFEIFER, D. AND DEHEUVELS, P. A semigroup approach to Poisson approximation 663–676
PHILIPP, WALTER, DEHLING, HEROLD, AND DENKER, MANFRED. Central limit theorems for mixing sequences of random variables under minimal conditions 1359–1370
PICKANDS III, JAMES. The continuous and differentiable domains of attraction of the extreme value distributions 996–1004
PINSKY, ROSS. A spectral criterion for the finiteness or infiniteness of stopped Feynman–Kac functionals of diffusion processes 1180–1187
PITMAN, JIM AND YOR, MARC. Asymptotic laws of planar Brownian motion 733–779
PITMAN, JIM AND YOR, MARC. Level crossings of a Cauchy process 780–792
PRESUTTI, E., SPOHN, H., WICK, W. D., AND DE MASI, A.

Asymptotic equivalence of fluctuation fields for reversible exclusion processes with speed change 409–423
PYKE, RONALD AND ALEXANDER, KENNETH S. A uniform central limit theorem for set-indexed partial-sum processes with finite variance 582–597
RAMAKRISHNAN, S. AND SUDDERTH, W. D. The expected value of an everywhere stopped martingale 1075–1079
RAO, MURALI AND GLOVER, JOSEPH. Hunt's hypothesis (H) and Getoor's conjecture 1085–1087
REICH, JAKOB I. C^∞ densities for weighted sums of independent random variables 1005–1013
ROGERS, L. C. G. AND LINDVALL, TORGNY. Coupling of multidimensional diffusions by reflection 860–872
ROGGE, LOTHAR AND LANDERS, DIETER. Second-order approximation in the conditional central limit theorem 313–325
ROGGE, L. AND LANDERS, D. An inequality for the Hausdorff-metric of σ-fields 724–730
ROOTZÉN, HOLGER. Extreme value theory for moving average processes 612–652
ROSEN, JAY. Tanaka's formula and renormalization for intersections of planar Brownian motion 1245–1251
ROSIŃSKI, J. AND WOYCZYŃSKI, W. A. On Itô stochastic integration with respect to p-stable motion: Inner clock, integrability of sample paths, double and multiple integrals 271–286
ROSS, DAVID. Random sets without separability 1064–1069
RUBIN, HERMAN AND SELLKE, THOMAS. On the distributions of sums of symmetric random variables and vectors 247–259
RYZNAR, M. Asymptotic behaviour of stable measures near the origin 287–298
SAMOTIJ, K. AND BYCZKOWSKI, T. Absolute continuity of stable seminorms 299–312
SCHONMANN, ROBERTO HENRIQUE. Central limit theorem for the contact process 1291–1295
SELLKE, THOMAS AND RUBIN, HERMAN. On the distributions of sums of symmetric random variables and vectors 247–259
SERFOZO, RICHARD F. Compound Poisson approximations for sums of random variables 1391–1398
SHEPP, LAWRENCE A., KLASS, MICHAEL J., AND NAIR, VIJAYAN N. On the number of crossings of empirical distribution functions 877–890
SPOHN, H., WICK, W. D., DE MASI, A., AND PRESUTTI, E. Asymptotic equivalence of fluctuation fields for reversible exclusion processes with speed change 409–423
STEELE, J. MICHAEL. Fisher information and detection of a Euclidean perturbation of an independent stationary process . 326–335
STEINEBACH, J. Improved Erdös–Rényi and strong approxima-

tion laws for increments of renewal processes 547–559
STRICKER, CHRISTOPHE. Représentation prévisible et changement de temps 1070–1074
STROOCK, DANIEL W. On the rate at which a homogeneous diffusion approaches a limit, an application of large deviation theory to certain stochastic integrals 840–859
STUTE, WINFRIED. On almost sure convergence of conditional empirical distribution functions 891–901
SUDDERTH, W. D. AND RAMAKRISHNAN, S. The expected value of an everywhere stopped martingale 1075–1079
SZULGA, JERZY AND KRAKOWIAK, WIESŁAW. Random multilinear forms 955–973
TALAGRAND, M. ET LEDOUX, M. Conditions d'intégrabilité pour les multiplicateurs dans le TLC Banachique 916–921
TAQQU, MURAD S. AND MCCONNELL, TERRY R. Decoupling inequalities for multilinear forms in independent symmetric random variables 943–954
THOMPSON, COLIN J. The contributions of Mark Kac to mathematical physics 1129–1138
THORISSON, HERMANN. On maximal and distributional coupling . 873–876
TOMKINS, R. J. Regular variation and the stability of maxima .. 984–995
VAN ES, BERT. On the weak limits of elementary symmetric polynomials 677–695
VEEH, JERRY ALAN, HUDSON, WILLIAM N., AND JUREK, ZBIGNIEW J. The symmetry group and exponents of operator stable probability measures 1014–1023
WAYMIRE, ED AND BURTON, JR., ROBERT M. A sufficient condition for association of a renewal process 1272–1276
WICK, W. D., DE MASI, A., PRESUTTI, E., AND SPOHN, H. Asymptotic equivalence of fluctuation fields for reversible exclusion processes with speed change 409–423
WOYCZYŃSKI, W. A. AND ROSIŃSKI, J. On Itô stochastic integration with respect to p-stable motion: Inner clock, integrability of sample paths, double and multiple integrals 271–286
YANAGIHARA, HIROSHI. Stochastic determination of moduli of annular regions and tori 1404–1410
YOR, MARC AND PITMAN, JIM. Asymptotic laws of planar Brownian motion 733–779
YOR, MARC AND PITMAN, JIM. Level crossings of a Cauchy process 780–792
ZAMAN, ARIF. A finite form of de Finetti's theorem for stationary Markov exchangeability 1418–1427
ZHANG, CUN-HUI. The lower limit of a normalized random walk . 560–581
ZHANG, CUN-HUI AND CHOW, YUAN SHIH. A note on Feller's strong law of large numbers 1088–1094
ZHENGYAN, LIN, GUIJING, CHEN, AND FANCHAO, KONG. Answers

to some questions about increments of a Wiener process 1252–1261
ZINN, JOEL AND GINÉ, EVARIST. Empirical processes indexed by Lipschitz functions 1329–1338

Corrections

BASS, R. F. AND ERICKSON, K. B.. Local laws of the iterated logarithm for diffusions 731
PHILIPP, WALTER. Correction to "Weak and L^p-invariance principles for sums of B-valued random variables" 1095–1101

Book Reviews

NEY, PETER. Two books on large deviations: *Entropy, Large Deviations, and Statistical Mechanics* by Richard S. Ellis and *An Introduction to the Theory of Large Deviations* by D. W. Stroock 1428–1431
PROTTER, PHILIP. Three books on stochastic integration: *Introduction to Stochastic Integration* by K. L. Chung and R. J. Williams, *Stochastic Calculus and Applications* by R. J. Elliott, and *Semimartingales: A Course on Stochastic Processes* by M. Metivier 343–346
