CONTENTS OF VOLUME 4

SPECIAL INVITED PAPER

CRAMÉR, HAROLD. Half a century with probability theory: some personal recollections.	509–546
--	---------

ARTICLES AND SHORT COMMUNICATIONS

ADLER, ROBERT J. AND HASOFER, A. M. Level crossings for random fields.	1–12
AHLWEDE, RUDOLF AND GÁCS, PÉTER. Spreading of sets in product spaces and hypercontraction of the Markov operator.	925–939
ARJAS, ELJA AND NUMMELIN, ESA. A direct construction of the R -invariant measure for a Markov chain on a general state space.	674–679
ASMUSSEN, SØREN. Convergence rates for branching processes.	139–146
ATHREYA, K. B. AND KAPLAN, N. Convergence of the age distribution in the one-dimensional supercritical age-dependent branching process.	38–50
BASU, SUJIT K. On a local limit theorem concerning variables in the domain of normal attraction of a stable law of index α , $1 < \alpha < 2$	486–489
BERMAN, JEREMY. An example of a weak martingale.	107–108
BLASI, ALESSANDRO. On a random walk between a reflecting and an absorbing barrier.	695–696
BLOCK, HENRY W. AND SAVITS, T. H. The IFRA closure problem.	1030–1032
BOLTHAUSEN, ERWIN. On a functional central limit theorem for random walks conditioned to stay positive.	480–485
CHAMBERLAIN, MICHAEL W. The reconstructability of Markov chains.	127–132
CHAN, Y. K. A constructive renewal theorem.	644–655
CHERNOFF, H. AND PETKAU, A. J. An optimal stopping problem for sums of dichotomous random variables.	875–889
ÇINLAR, ERHAN. On the structure of semimarkov processes compared with Chung processes.	402–417
CUZICK, JACK. A central limit theorem for the number of zeros of a stationary Gaussian process.	547–556
DALEY, D. J. Another upper bound for the renewal function.	109–114
DAVIES, LAURIE. Local Hölder conditions for the local times of certain stationary Gaussian processes.	277–298
DUBUC, S. AND SENETA, E. The local limit theorem for the Galton-Watson process.	490–496
EISENBERG, BENNETT. Prediction theory and ergodic spectral decompositions.	98–101
ERICKSON, K. BRUCE. Recurrence sets of normed random walk in R^d	802–828
ETEMADI, NASROLLAH. The range of random walk in two-dimensional time.	836–843
FERN, DEAN H. Supercritical age dependent branching processes with generation dependence.	27–37
FINE, TERRENCE AND GILL, JOHN. The enumeration of comparative probability relations.	667–673

FLATTO, LEOPOLD. The multiple range of two-dimensional recurrent walk.	229–248
FRANKEL, JUDAH M. A note on downcrossings for extremal processes.	151–152
GÁCS, PÉTER AND AHLWEDE, RUDOLF. Spreading of sets in product spaces and hypercontraction of the Markov operator.	925–939
GARCIA ALVAREZ, M. A. Une théorie de la dualité à ensemble Polaire près II.	947–976
GARLING, D. J. H. Functional central limit theorems in Banach spaces.	600–611
GEMAN, DONALD, HOROWITZ, JOSEPH AND ZINN, JOEL. Recurrence of stationary sequences.	372–381
GIANINI, JACQUELINE AND SAMUELS, STEPHEN M. The infinite secretary problem.	418–432
GILL, JOHN AND FINE, TERRENCE. The enumeration of comparative probability relations.	667–673
GOODMAN, VICTOR. Distribution estimates for functionals of the two-parameter Wiener process.	977–982
GOODSELL, C. A. AND HANSON, D. L. Almost sure convergence for the Robbins-Monro process.	890–901
GRIFFEATH, DAVID. Partial coupling and loss of memory for Markov chains.	850–858
GROSSWALD, EMIL. The Student t -distribution for odd degrees of freedom is infinitely divisible.	680–683
HANSON, D. L. AND GOODSELL, C. A. Almost sure convergence for the Robbins-Monro process.	890–901
HARRIS, T. E. On a class of set-valued Markov processes.	175–194
HASOFER, A. M. AND ADLER, ROBERT J. Level crossings for random fields.	1–12
HOFFMANN-JØRGENSEN, J. AND PISIER, G. The law of large numbers and the central limit theorem in Banach spaces.	587–599
HOLLEY, R. A. AND STROOCK, D. W. A martingale approach to infinite systems of interacting processes.	195–228
HOPPE, FRED M. Supercritical multitype branching processes.	393–401
HOROWITZ, JOSEPH, ZINN, JOEL AND GEMAN, DONALD. Recurrence of stationary sequences.	372–381
HUDSON, WILLIAM N. Admissible translates for probability distributions.	505–508
HWANG, J. S. On the recurrence property of Gaussian Taylor series.	453–455
IMHOF, J. P. Oscillations of continuous symmetric random walk.	662–666
JAIN, NARESH C. An example concerning CLT and LIL in Banach space.	690–694
JAMES, IAN R. Infinite F -divisibility of integer-valued random variables.	326–334
JONES, ROGER L. The ergodic maximal function with cancellation.	91–97
KAIGH, W. D. An invariance principle for random walk conditioned by a late return to zero.	115–121
KANTER, MAREK. On the unimodality of stable densities.	1006–1008

KAPLAN, N. AND ATHREYA, K. B. Convergence of the age distribution in the one-dimensional supercritical age-dependent branching process . . .	38–50
KESTEN, HARRY. Existence and uniqueness of countable one-dimensional Markov random fields	557–569
KIEFFER, JOHN C. On the minimum number of fixed length sequences with fixed total probability	335–337
KLEIN, RUBEN. A representation theorem on stationary Gaussian processes and some local properties	844–849
KUELBS, J. A counterexample for Banach space valued random variables	684–689
KUELBS, J. A strong convergence theorem for Banach space valued random variables	744–771
LAI, TZE LEUNG. Asymptotic moments of random walks with applications to ladder variables and renewal theory	51–66
LAI, TZE LEUNG. Boundary crossing probabilities for sample sums and confidence sequences	299–312
LAI, TZE LEUNG. On r -quick convergence and a conjecture of Strassen	612–627
LAI, TZE LEUNG. Uniform Tauberian theorems and their applications to renewal theory and first passage problems	628–643
LANDERS, D. AND ROGGE, L. Convergence of conditional p -means given a σ -lattice	147–150
LANE, DAVID A. Purely atomic structures supporting undominated and nonuniformly integrable martingales	1016–1019
LIGGETT, THOMAS M. Coupling the simple exclusion process	339–356
LOYNES, R. M. A criterion for tightness for a sequence of martingales	859–862
MANGANO, GIAN-CARLO. Sequential compactness of certain sequences of Gaussian random variables with values in $C[0,1]$	902–913
MICHEL, R. Nonuniform central limit bounds with applications to probabilities of deviations	102–106
MITTAL, YASH AND YLVISAKER, DONALD. Strong laws for the maxima of stationary Gaussian processes	357–371
MOHAN, N. R. Teugels' renewal theorem and stable laws	863–868
MONROE, ITREL. Almost sure convergence of the quadratic variation of martingales: a counterexample	133–138
MORI, TOSHIO. Limit laws for maxima and second maxima from strong-mixing processes	122–126
MYERS, L. E. Central terms of Markov walks	313–318
NEVISON, CHRISTOPHER H. Potentials of Markov processes without duality	497–501
NUMMELIN, ESA AND ARJAS, ELJA. A direct construction of the R -invariant measure for a Markov chain on a general state space	674–679
OAKES, DAVID. Random overlapping intervals—a generalization of Erlang's loss formula	940–946
PETKAU, A. J. AND CHERNOFF, H. An optimal stopping problem for sums of dichotomous random variables	875–889

PIPKIN, A. C. AND VITALE, R. A. Conditions on the regression function when both variables are uniformly distributed	869-873
PISIER, G. AND HOFFMANN-JØRGENSEN, J. The law of large numbers and the central limit theorem in Banach spaces	587-599
PURVES, ROGER A. AND SUDDERTH, WILLIAM D. Some finitely additive probability	259-276
