

NOTE

ADDENDUM TO

“THE STRONG UNIFORM CONSISTENCY OF NEAREST NEIGHBOR DENSITY ESTIMATES”

BY L. P. DEVROYE AND T. J. WAGNER

University of Texas at Austin and Rice University

The result presented in this note (*Ann. Statist.* 5 536–540) is a theorem concerning the convergence of nearest neighbor density estimates. Immediately after the theorem, the implication of this result on the convergence of kernel density estimates with a kernel which is uniform over the unit sphere is given. In this discussion the closely related work on kernel estimates by Deheuvels (1974) should have been mentioned.
