A NEW SERIES

VOLUMES IN PROBABILITY AND MATHEMATICAL STATISTICS

A NEW SERIES OF MONOGRAPHS AND TEXTBOOKS
edited by **Z. W. BIRNBAUM**, University of Washington, Seattle
and **EUGENE LUKACS**, Catholic University, Washington, D. C.

A GRADUATE COURSE IN PROBABILITY

by **HOWARD G. TUCKER**, *University of California, Riverside*
No previous knowledge of probability is assumed for this one-year graduate course text in analytic probability theory, but some background in real analysis is a prerequisite. The book provides instruction for graduate students in mathematics and mathematical statistics. It also gives direct access to the basic theorems of probability theory for mathematicians of all interests.
1967, 278 pp., $12.00

MATHEMATICAL STATISTICS

A DECISION THEORETIC APPROACH
by **THOMAS S. FERGUSON**, *University of California, Los Angeles*
The decision-theoretic viewpoint provides a sharp focus for this beginning graduate text. The author presents the elements of Wald's decision theory and analyzes the extent to which this approach can be applied to problems of mathematical statistics. The main ideas are developed in the first two chapters culminating in a rather general complete class theorem. Topics include sufficient statistics, invariance, testing hypotheses, and multiple and sequential decision problems.
1967, 396 pp., $14.50

PROBABILITY MEASURES ON METRIC SPACES

by **K. R. PARTHASARATHY**, *The University of Sheffield, England*
A self-contained and complete treatment of probability distributions and limit theorems in metric spaces. Convolutions of probability distributions in both locally compact abelian groups and Hilbert spaces are considered. Much of the work included is original with emphasis placed on the Indian school of probabilists as represented among others by V. S. Varadarajan, R. Ranga Rao, S. R. S. Varadhan, and the author.
1967, 276 pp., $12.00

IN PREPARATION

MATHEMATICAL METHODS IN RELIABILITY THEORY

FUNDAMENTAL CHARACTERISTICS OF RELIABILITY AND THEIR STATISTICAL ANALYSIS
by **B. V. GNEDENKO, YU. K. BELYAEV,** and **A. D. SOLOV'YAV** translated from the Russian edition
technical editor: Richard E. Barlow

THE LAWS OF LARGE NUMBERS

by **PÁL RÉVÉSZ**

ACADEMIC PRESS NEW YORK AND LONDON
111 FIFTH AVENUE, NEW YORK, N. Y. 10003

Institute of Mathematical Statistics is collaborating with JSTOR to digitize, preserve, and extend access to *The Annals of Mathematical Statistics.*

THE INSTITUTE OF MATHEMATICAL STATISTICS

(Organized September 12, 1935)

OFFICERS

President:
Herman Chernoff, Department of Statistics, Stanford University, Stanford, California 94305

President-Elect:
Wassily Hoeffding, Department of Statistics, University of North Carolina, Chapel Hill, North Carolina 27514

Executive Secretary:
Leo Katz, Statistical Laboratory, Michigan State University, East Lansing, Michigan 48823

Program Secretary:
Joan Raup Rosenblatt, National Bureau of Standards, Washington, D.C. 20234

Treasurer:
George J. Resnikoff, Department of Statistics, California State College, Hayward, California 94542

Editor:
Z. W. Birnbaum, Department of Mathematics, University of Washington, Seattle, Washington 98105

Managing Editor:
Paul L. Meyer, Department of Mathematics, Washington State University, Pullman, Washington 99163

The purpose of the Institute of Mathematical Statistics is to encourage the development, dissemination, and application of mathematical statistics.

Membership dues including a subscription to the ANNALS of MATHEMATICAL STATISTICS are $20.00 per year for residents of the United States or Canada and $12.00 per year for residents of other countries. Special student rates of $10.00 per year are available to students residing in the U.S. and Canada. Inquiries regarding membership in the Institute should be sent to the Treasurer of the Institute.

Membership in the Institute of Mathematical Statistics is not required of authors of papers in the *Annals of Mathematical Statistics* and the fact of membership or non-membership is given no weight in the consideration of submitted manuscripts.

Contents (Continued)

Some rules for a combinatorial method for multiple products of generalized k-statistics
DERRICK S. TRACY 983
Common treatments between blocks of certain partially balanced incomplete block designs ..... P. U. SURENDRAN 999
The correlation structure of the output process of some single server systems
D. J. DALEY 1007
Functions of finite Markov chains and exponential type processes. PAUL E. BOUDREAU 1020
On estimating monotone parameters ..... TIM ROBERTSON AND PAUL WALTMAN 1030
The performance of some sequential procedures for a ranking problem
M. S. SRIVASTAVA AND J. OGILVIE 1040
Bounds on the sample size distribution for a class of invariant sequential probability ratio tests ..... R. A. WIJSMAN 1048
Sequential maximum likelihood estimation of the size of a population. ESTER SAMUEL 1057
Splitting a single state of a stationary process into Markovian states
S. W. DHARMADHIKARI 1069
Notes
A clarification concerning certain equivalence classes of Gaussian processes on an interval ..... J. FELDMAN 1078
An inequality in constrained random variables ..... C. L. MALLOWS 1080
On a simple estimate of the reciprocal of the density function
DANIEL A. BLOCH AND JOSEPH L. GASTWIRTH 1083
Abstracts of Papers 1086
News and Notices 1098
Report of the East Lansing meeting 1101
Publications Received 1104

MEETINGS OF THE INSTITUTE

ANNUAL MEETING—Madison, Wisconsin, August 26–30, 1968
EUROPEAN MEETING—Amsterdam, Netherlands, September 2–7, 1968

Abstracts should be submitted in duplicate to the Managing Editor, P. L. Meyer, Department of Mathematics, Washington State University, Pullman, Washington, on abstract blanks which may be obtained from him or from any Secretary or Associate Secretary. Abstracts must be received at least 50 days before the first day of the meeting at which they are to be presented, indicating whether presented by title or in person. (Only one contributed paper may be given in person at any one meeting.) They may be printed prior to the publication of the report of the meeting. Ordinarily, each issue will contain those abstracts received at least 75 days before it appears. Abstracts should be limited to 200 words or the equivalent and should avoid displayed expressions and complicated formulae. They can be accepted from non-members of the IMS only if introduced by members. Abstracts must follow the stylistic requests on the abstract blank, or they may be returned.
