Studies in Mathematical Psychology

EDITED BY R. C. ATKINSON. Fourteen papers present the most recent developments in the analysis of mathematical models and their application to psychological data. Emphasis has been placed upon theoretical and theoretically-oriented experimental studies. The extensive selection of material in this book makes it essential for research oriented psychologists, mathematicians, and behavioral scientists interested in the application of mathematics to psychological phenomena. $11.50

Big School, Small School

High School Size and Student Behavior. ROGER G. BARKER AND PAUL V. GUMP. The principal aim of the research reported here is to supply specific, dependable information on the effects of school size. Detailed investigations were made in high schools varying in size from 35 to 2,287 students. The results of the study repudiate the belief that increasing school size, and thus increasing school offerings, results in richer or more involved student experience. $6.75

PhD-Level Opportunities for Mathematical Statisticians

AT THE KNOLLS ATOMIC POWER LABORATORY

You will be working with other high-level personnel of many disciplines at a laboratory where the nuclear age is spoken of in the present—not the future.

As a MATHEMATICAL STATISTICIAN, you will be responsible for statistical research in the development of new methods; consultation in the application of statistical methods; teaching college level courses in probability, statistical methods, design of experiments, and related special subjects. A Philco 2000 and IBM 1620 with programming staff are available for your use. Typical problems include formulation and exploitation of stochastic models describing nuclear reactor systems' performance, materials' behavior under fissioning, and design of long-term irradiations experiments. (PhD required.)

Please forward your resume and salary requirements to Mr. G. L. Smallwood. Dept. 154-L

U. S. Citizenship Required

JOURNAL OF THE
ROYAL STATISTICAL SOCIETY

THE JOURNAL OF THE ROYAL STATISTICAL SOCIETY is published in two series. SERIES A (GENERAL), four issues a year, annual subscription £5 4s. post free, U.S. $15: price each part 30s: SERIES B (METHODOLOGICAL), two issues a year, annual subscription £4 s2. post free, U.S. $12: price each part 50s.

Series B (Methodological), Vol. 25, Part 2, 1963

The simplex-centroid design for experiments with mixtures (with discussion) H. SCHEFFÉ
The spectral analysis of point processes (with discussion) M. S. BARTLETT
A minimax regret procedure for choosing between two populations using sequential sampling N. L. JOHNSON AND RITA J. MAURICE
Higher moments of a maximum likelihood estimate L. R. SHENTON AND K. BOWMAN
Confidence points based on weighted likelihoods B. L. WELCH AND H. W. PEERS
Confidence interval estimation in non-linear regression M. HALPERIN
On the randomization distribution and power of the variance ratio test M. ATIQULLAH
Multivariate linear hypothesis with linear restrictions D. G. KABE
Applications of Jordan's procedure for matrix inversion in multiple regression and multivariate distance analysis G. H. JOWETT
Hotelling's generalised T^2 in the multivariate analysis of variance M. N. GHOSH
Posterior distributions for multivariate normal parameters S. GEISSER AND J. CORNFIELD
On the independence of quadratic expressions I. J. GOOD
Quadratics in Markov chain frequencies and the binary chain of order 2 I. J. GOOD
On a property of the lognormal distribution C. C. HEYDE
The correlated unrestricted random walk A. SETH
A lower bound for the critical probability in the one-quadrant percolation process J. BISHIR
The diffusion equation and a pseudo-distribution in genetics W. J. EWENS
Higher-order properties of a stationary point process J. A. MCFADDEN AND W. WEISSBLUM
An approximate solution of the integral equation of renewal theory D. J. BARTHOLOMEW
Periodogram analysis and variance fluctuations L. J. HERBST
A test for variance heterogeneity in the residuals of a Gaussian moving average L. J. HERBST
A correction to the solution of queueing and inventory models by semi-Markov chains A. FABENS AND A. PERERA
Treatment of the non-equilibrium theory of simple queues by means of cumulative probabilities R. A. SACK
On the asymptotic behavior of queues J. KEILSON
Some numerical results for the queueing system $D/E_k/1^*$. M. C. PIKE
Competitive queueing. 1. Idleness probabilities under priority disciplines D. P. GAVER

Calcutta-35, India.

INTERNATIONAL JOURNAL OF ABSTRACTS STATISTICAL THEORY AND METHOD

A Journal of the International Statistical Institute

The aim of this journal of abstracts is to give **complete coverage of published papers in the field of statistical theory** (including associated aspects of probability and other mathematical methods) **and new published contributions to statistical method.**

All contributions in the following five journals—being wholly devoted to this field—are abstracted: *Annals of Mathematical Statistics; Biometrika; Journal, Royal Statistical Society (Series B); Bulletin of Mathematical Statistics; Annals, Institute of Statistical Mathematics;* and a further group of six journals are abstracted on a **virtually complete** basis as follows: *Biometrics; Metrika; Metron; Review, International Statistical Institute; Technometrics; Sankhyā.* There are about 250 other journals partly devoted to statistical theory and method from which the appropriate papers are abstracted.

The abstracts are about **400** words long—the recommendation of UNESCO for the 'long' abstract service: they are in the English language although the original language of the paper is noted on the abstract together with the name of the abstractor. In addition the address of the author(s) is given in detail to facilitate contact in order to obtain further detail or request an off-print. **The journal is published quarterly and contains approximately 750 abstracts per year.**

A scheme of classification has been developed for the abstracts that is flexible and facilitates the transfer of code numbers to punched cards. **A unique aspect of this journal** is that the pages are colour-tinted according to the main sections of classification. This method of colour-coding the pages provides a distinctive and powerful visual aid in the identification of abstracts in whatever manner the journal is filed for reference.

Annual Subscription £5 (U.S.A. and Canada $16.00)
Single Number 30s. (U.S.A. and Canada $4.50)

SELECTED TRANSLATIONS IN MATHEMATICAL STATISTICS AND PROBABILITY

Volume IV

This volume contains 35 papers. Published for the Institute of Mathematical Statistics by the American Mathematical Society

400 pages $5.30

Orders for copies of Volume IV and standing orders for this series should be sent to the

AMERICAN MATHEMATICAL SOCIETY

190 Hope Street, Providence 6, R.I.

THE INSTITUTE OF MATHEMATICAL STATISTICS

(Organized September 12, 1935)

OFFICERS

President:

Z. W. Birnbaum, Department of Mathematics, University of Washington, Seattle 5, Washington

President-Elect:

Herbert Solomon, Department of Statistics, Stanford University, Stanford, California

Executive Secretary:

G. E. Nicholson, Jr., Department of Statistics, University of North Carolina, Chapel Hill, North Carolina

Program Secretary:

Dorothy Gilford, Office of Naval Research, Washington 25, D.C.

Treasurer:

Gerald Lieberman, Institute of Mathematical Statistics, Sequoia Hall, Stanford University, Stanford, California

Editor:

J. L. Hodges, Jr., Department of Statistics, University of California, Berkeley 4, California

The purpose of the Institute of Mathematical Statistics is to encourage the development, dissemination, and application of mathematical statistics.

Membership dues including a subscription to the ANNALS OF MATHEMATICAL STATISTICS are $15.00 per year for residents of the United States or Canada and $7.00 per year for residents of other countries. There are special rates for students and for some other classes of members. Inquiries regarding membership in the Institute should be sent to the Treasurer of the Institute.

Membership in the Institute of Mathematical Statistics is not required of authors of papers in the *Annals of Mathematical Statistics*, and the fact of membership or non-membership is given no weight in the consideration of submitted manuscripts.

Contents (Continued)

An Asymptotically Optimal Sequential Design for Comparing Several Experimental Categories With a Control ..... CHARLES DEWITT ROBERTS 1486
Asymptotically Nonparametric Inference: An Alternative Approach to Linear Models ..... E. L. LEHMANN 1494
Nonparametric Confidence Intervals for a Shift Parameter ..... E. L. LEHMANN 1507
The Asymptotic Normality of Two Test Statistics Associated With the Two-Sample Problem ..... SAUL BLUMENTHAL 1513
Minimax Character of Hotelling's T^2 Test in the Simplest Case ..... N. GIRI, J. KIEFER AND C. STEIN 1524
Minimax Theorems on Conditionally Compact Sets ..... TEH TJOE-TIE 1536
Existence, Uniqueness and Monotonicity of Sequential Probability Ratio Tests ..... R. A. WIJSMAN 1541
Almost Periodic Variances ..... LAURENCE HERBST 1549
On the Null-Distribution of the F-Statistic in a Randomized Balanced Incomplete Block Design Under the Neyman Model ..... JUNJIRO OGAWA 1558
Some Consequences of Randomization in a Generalization of the Balanced Incomplete Block Design ..... GEORGE ZYSKIND 1569
Notes
A New Result on the Distribution of Quadratic Forms ..... HAROLD RUBEN 1582
The Conditional Distribution of Sets of Tests on a System Simulated From Tests on Its Components ..... W. S. CONNOR 1585
Application of Methods in Sequential Analysis to Dam Theory ..... R. M. PHATARFOD 1588
Normal Approximation to the Distribution of Two Independent Binomials, Conditional on Fixed Sum ..... J. HANNAN AND W. HARKNESS 1593
Use of the Wilcoxon Statistic for a Generalized Behrens-Fisher Problem ..... RICHARD F. POTTHOFF 1596
A Combinatorial Theorem for Partial Sums ..... R. L. GRAHAM 1600
Correction Notes 1603

MEETINGS OF THE INSTITUTE

TENTATIVE SCHEDULE

WESTERN REGIONAL—Monterey, California—January 29–31, 1964 (Symposium on Control and System Optimization, January 27–29).

CENTRAL REGIONAL—Manhattan, Kansas—May 7–9, 1964.

ANNUAL MEETING—Amherst, Mass., Aug. 30-Sept. 4, 1964.

EUROPEAN REGIONAL—Bern, Switzerland—September 14–16, 1964.

Abstracts should be submitted in duplicate to the Editor, on abstract blanks which can be found in the back of every *Annals*, beginning with the March 1961 issue, or can be obtained from the IMS Secretary. Abstracts must be received at least 50 days before the first day of the meeting at which they are to be presented, indicating whether presented by title or in person. (Only one contributed paper may be given in person at any one meeting.) They may be printed prior to the publication of the report of the meeting. Those received by April 30 will appear in the September *Annals*, by July 31 in December, etc. Abstracts should be limited to 200 words or the equivalent, and should avoid displayed expressions and complicated formulae. They can be accepted from non-members of the IMS only if introduced by members. Abstracts must follow the stylistic requests on the abstract blank, or they may be returned.
