an important book on experimental design . . .

INTRODUCTION TO SCIENTIFIC INFERENCE

by Robert Hooke, Westinghouse Research Laboratories

A monograph to acquaint scientists and engineers (and serious undergraduates) with some of the elements of scientific inference as statisticians see it, and to stimulate their interest in the study of statistics. Emphasizes ideas, with a low mathematical level, but provides clear and simple explanations of principles of quantitative description important in the work of scientists and engineers.

Reviewers comment:

"Hooke has observed keenly the weak spots in experimental practice and has set down in this concisely written book pertinent remarks on how to avoid the common pitfalls and how to strengthen scientific inferences from experimental design."

"A delight to read. This book presents the essence of statistical philosophy without burdening the reader with innumerable special techniques. It should be read by every engineer or scientist who has an experiment to perform, *before* he calls in the consulting statistician. It may also be profitably read by people who manage statisticians."

"This is an excellent treatment of many main statistical issues in experimentation. It is free of jargon. Very rewarding."

"Exactly right. I have needed this book for years."

Price: $4.75

WILEY BOOKS

SAMPLING TECHNIQUES

SECOND EDITION

By WILLIAM G. COCHRAN, *Harvard University*. This is an up-to-date, comprehensive account, discussing the techniques appropriate for the handling of any common type of survey, whether in business, market research, opinion research, medical science, sociology, or agriculture. It explains the methods suitable for both small-scale and large-scale surveys. For each technique presented, the type of sampling problem to which it is related is considered, with frequent numerical illustrations from actual surveys.

Special features . . .

Relates sample survey theory to the main body of statistical theory
A new chapter devoted to Techniques for efficient use of stratification

1963. Approx. 424 pages. Prob. $10.00

PROBABILITY THEORY AND MATHEMATICAL STATISTICS

By MAREK FISZ, *New York University*. This revised, enlarged and updated edition provides a concise and clear-cut introduction to the field. It presents an outline of many of the possible applications of the theory accompanied by descriptive, concrete examples. And it provides extensive references to books and papers, giving the reader opportunity to complete his knowledge of the subjects considered.

Although great care has been taken to make the book mathematically rigorous, the intuitive approach as well as the applicability of the concepts and theorems is heavily stressed. K. Prachar called the book "one of the most comprehensive and lucidly written introductions to probability theory and mathematical statistics." *Probability Theory and Mathematical Statistics* will be widely used by mathematicians and theoretical and applied statisticians and by students majoring in mathematics and mathematical statistics or other fields which use statistical methods.

1963. Approx. 694 pages. Prob. $17.00.

Wagner: STATISTICAL MANAGEMENT OF INVENTORY SYSTEMS

Wiley Publication In Operations Research, No. 6. 1962. 232 pages. $8.95.

Macon: NUMERICAL ANALYSIS

1963. Approx. 176 pages. Prob. $5.50.

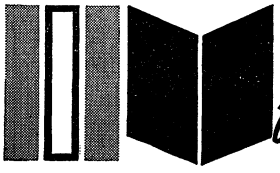
JOHN WILEY & SONS, Inc. 440 PARK AVENUE SOUTH NEW YORK 16, N. Y.



INTRODUCTION TO STATISTICAL INFERENCE

By Harold Freeman, *Massachusetts Institute of Technology*
Intended as a text for the first course in statistical theory, this new book may also be used for a one-term course in either statistical inference or elementary probability. Many problems are included, with full solutions in the text.
c. 544 pp., 72 illus., 1963—probably $7.75

MATHEMATICAL PROGRAMMING

By S. Vajda, *British Admiralty Research Laboratory*
"Dr. Vajda's book is a thorough and efficient exposition, bringing together not only much of the best earlier work, but also much that is recent, new and original." (The Engineer)
310 pp., 77 illus., 1961—$8.75

HANDBOOK OF STATISTICAL TABLES

By Donald B. Owen, *Sandia Corp.*
"Over 100 tables of functions used in statistics are published in this new handbook. . . . practicing statisticians, quality control people, industrial engineers and research workers will find the handbook extremely useful." (Jl. of the Franklin Institute)
580 pp., 48 illus., 1962—$12.50

INDEX OF MATHEMATICAL TABLES—Second Edition

By Fletcher, Miller, Rosenhead and Comrie
Indexes the contents of all important mathematical tables published since Briggs' *Logarithmorum Chilias Prima* (1617).
In Two Volumes, 1962, the set: $42.00

MATHEMATICAL METHODS AND THEORY IN GAMES, PROGRAMMING, AND ECONOMICS

By Samuel Karlin, *Stanford University*
Presents in a rigorous, unified manner the concepts of game theory and programming theory, together with the related concepts of mathematical economics.
VOL. I: Matrix Games, Programming, and Mathematical Economics *433 pp., 16 illus., 1959—$12.50*

VOL. II: The Theory of Infinite Games
386 pp., 10 illus., 1959—$10.75

PhD-Level OPPORTUNITIES for STATISTICIANS

AT THE KNOLLS ATOMIC POWER LABORATORY

You will be working with other high-level personnel of many disciplines at a laboratory where the nuclear age is spoken of in the present—not the future. The nature of our hardware is nuclear propulsion for surface and submersible vessels.

As a STATISTICIAN, you will be responsible for statistical research in the development of new methods; consultation in the application of statistical methods; teaching college level courses in probability, statistical methods, design of experiments, and related special subjects. A Philco 2000 and IBM 1620 with programming staff are available for your use. Typical problems include formulation and exploitation of stochastic models describing nuclear reactor systems' performance, materials' behavior under fissioning, and design of long-term irradiations experiments. (PhD required)

Please forward your resume and salary requirements in confidence to Mr. G. L. Smallwood. An Equal Opportunity Employer.

U. S. Citizenship Required

Knolls Atomic Power Laboratory

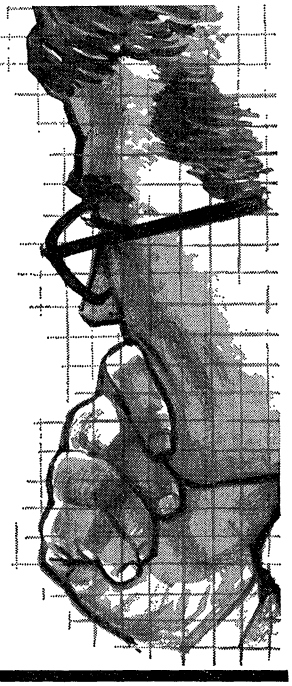
GENERAL ELECTRIC

SCHENECTADY, NEW YORK

But what about tomorrow?



Perhaps you've been wondering lately about your future. Has your professional growth developed in the same ratio as your interests and goals? Do you lack stimulation, challenge?

Perhaps the answers you seek lie in Martin Denver's advanced Aerospace Programs. Here you would find leaders in your specialty field, problems to challenge your mind and generate new ideas and concepts. Here you would find financial reward, personal progress and professional recognition.

STATISTICAL THEORY RESEARCH

Research position in statistical theory with responsibility in such fields as stochastic processes which arise in missile flight, behavior or solutions to differential equations with stochastic coefficients and initial conditions and distribution theory. M.S. or Ph.D. is desired with emphasis in area of mathematical statistics.

Send your resume, in confidence, to F. A. McGregor, Manager of Personnel Staffing, Mail No. A-64.

INTERNATIONAL JOURNAL OF ABSTRACTS STATISTICAL THEORY AND METHOD

A Journal of the International Statistical Institute

The aim of this journal of abstracts is to give **complete coverage of published papers in the field of statistical theory** (including associated aspects of probability and other mathematical methods) **and new published contributions to statistical method.**

All contributions in the following five journals—being wholly devoted to this field—are abstracted: *Annals of Mathematical Statistics; Biometrika; Journal, Royal Statistical Society (Series B); Bulletin of Mathematical Statistics; Annals, Institute of Statistical Mathematics;* and a further group of six journals are abstracted on a **virtually complete** basis as follows: *Biometrics; Metrika; Metron; Review, International Statistical Institute; Technometrics; Sankhyā.* There are about 250 other journals partly devoted to statistical theory and method from which the appropriate papers are abstracted.

The abstracts are about **400** words long—the recommendation of UNESCO for the 'long' abstract service: they are in the English language although the original language of the paper is noted on the abstract together with the name of the abstractor. In addition the address of the author(s) is given in detail to facilitate contact in order to obtain further detail or request an off-print. **The journal is published quarterly and contains approximately 750 abstracts per year.**

A scheme of classification has been developed for the abstracts that is flexible and facilitates the transfer of code numbers to punched cards. **A unique aspect of this journal** is that the pages are colour-tinted according to the main sections of classification. This method of colour-coding the pages provides a distinctive and powerful visual aid in the identification of abstracts in whatever manner the journal is filed for reference.

Annual Subscription	£5 (U.S.A. and Canada $16.00)
Single Number	30s. (U.S.A. and Canada $4.50)

OLIVER AND BOYD LTD.

THE INSTITUTE OF MATHEMATICAL STATISTICS

(Organized September 12, 1935)

OFFICERS

President:

T. W. Anderson, Department of Mathematical Statistics, Columbia University, New York 27, New York

President-Elect:

Z. W. Birnbaum, Department of Mathematics, University of Washington, Seattle 5, Washington

Executive Secretary:

G. E. Nicholson, Jr., Department of Statistics, University of North Carolina, Chapel Hill, North Carolina

Program Secretary:

Dorothy Gilford, Office of Naval Research, Washington 25, D.C.

Treasurer:

Gerald Lieberman, Institute of Mathematical Statistics, Sequoia Hall, Stanford University, Stanford, California

Editor:

J. L. Hodges, Jr., Department of Statistics, University of California, Berkeley 4, California

The purpose of the Institute of Mathematical Statistics is to encourage the development, dissemination, and application of mathematical statistics.

Membership dues including a subscription to the ANNALS OF MATHEMATICAL STATISTICS are $15.00 per year for residents of the United States or Canada and $7.00 per year for residents of other countries. There are special rates for students and for some other classes of members. Inquiries regarding membership in the Institute should be sent to the Treasurer of the Institute.

Membership in the Institute of Mathematical Statistics is not required of authors of papers in the *Annals of Mathematical Statistics*, and the fact of membership or non-membership is given no weight in the consideration of submitted manuscripts.

MEETINGS OF THE INSTITUTE

TENTATIVE SCHEDULE

EASTERN REGIONAL MEETING—Cambridge, Mass., May 6–7, 1963.
CENTRAL REGIONAL MEETING—Madison, Wisc., June 14–15, 1963.
WESTERN REGIONAL MEETING—Eugene, Ore., June 20–21, 1963.
EUROPEAN REGIONAL MEETING—Copenhagen, July 8–10, 1963.
ANNUAL MEETING—Ottawa, Aug. 27–29, 1963.

Abstracts should be submitted in duplicate to the Editor, on abstract blanks which can be found in the back of every *Annals*, beginning with the March 1961 issue, or can be obtained from the IMS Secretary. Abstracts must be received at least 50 days before the first day of the meeting at which they are to be presented, indicating whether presented by title or in person. (Only one contributed paper may be given in person at any one meeting.) They may be printed prior to the publication of the report of the meeting. Those received by April 30 will appear in the September *Annals*, by July 31 in December, etc. Abstracts should be limited to 200 words or the equivalent, and should avoid displayed expressions and complicated formulae. They can be accepted from non-members of the IMS only if introduced by members. Abstracts must follow the stylistic requests on the abstract blank, or they may be returned.
