BOOKS

CONTRIBUTIONS TO ORDER STATISTICS

Edited by Ahmed E. Sarhan, Alexandria University, Egypt, and Bernard G. Greenberg, University of North Carolina.

The modern trend in applied statistics, especially in industry, is to use methods based on ordered samples. This monograph, the first to cover this field, is arranged in two sections; the first presenting mathematical and theoretical foundations and the second indicating specific applications, and providing a wealth of formulas and convenient tables to help the research worker use order statistics and adopt its procedures to various problems. The illustrative examples are in life testing and longevity, quality control, and other areas of interest to the applied statistician.

The contributors have all been instrumental in bringing about the recent advances in order statistics.

NEW **IN THE ALLENDOERFER SERIES—** **A MODERN APPROACH TO** **MATHEMATICAL STATISTICS**

STATISTICAL THEORY *By B. W. Lindgren,*
Institute of Technology, University of Minnesota

The modern theory of statistics, based on a firm calculus foundation, is clearly explained. The book treats such current topics as: Minimal sufficiency, exponential families, Cramer-Rao inequality and efficiency, monotone likelihood ratio, uniformly most powerful tests, decision theory, non-central chi-square distributions, Fisher-Yates and vander-Waerden comparison tests.

The first four chapters provide a thorough yet compact development of the necessary probability theory, beginning with the mathematical definition of probability as a set function and culminating in the Central Limit Theorem for independent sequences. The heart of the book is the chapter on statistical problems and procedures. The concepts introduced there are directed, in later chapters, to the study of estimation and testing hypotheses, and applied to problems of single samples, comparisons, and linear models.

**ALSO FROM THE ALLENDOERFER UNDERGRADUATE AND
ADVANCED SERIES:**

RETRACING ELEMENTARY MATHEMATICS

*By Leon Henkin, University of California (Berkeley),
W. Norman Smith and Vern J. Varineau, both of the
University of Wyoming, and Michael J. Walsh, Informa-
tion Technology Division of General Dynamics/Electronics (San Diego)*

A careful examination of the logic behind elementary mathematics from grade school through college, including a detailed development of the system of real numbers based on axiomatic treatment of the positive integers. Inclusive chapters on mathematical logic, the theory of sets, and rational and irrational numbers provide students with the tools they need to master modern mathematics.

New — THIS SERIES IN PROBABILITY AND STATISTICS

- **STOCHASTIC PROCESSES**

by Emanuel Parzen. Intended for the student with a knowledge only of the calculus and the concepts of continuous probability theory, the book gives examples of the wide variety of empirical phenomena for which stochastic processes provide mathematical models, and provides an introduction to the methods of probability model-building. Parzen emphasizes applications of stochastic processes, and includes an excellent spread of graded exercises. June 1962, 336 pp., \$10.50.

- **BASIC CONCEPTS OF PROBABILITY AND STATISTICS**

by J. L. Hodges, Jr. and E. L. Lehmann. Prelim. ed. now available. Final ed. 1963.

- **PROBABILITY THEORY**

by Lajos Takács, Samuel Karlin, and Herbert Robbins. 1963

- **PROBABILITY**

by A. Rényi. 1963

- **FOUNDATION OF TIME SERIES ANALYSIS & STATISTICAL COMMUNICATION THEORY**

by Emanuel Parzen. 1963

**PRENTICE-HALL, INC.
Englewood Cliffs, New Jersey**

This monograph describes and proves most of the known existence theorems of information theory. It begins from first principles and requires no prior knowledge of information theory. Precise definitions are given, and proofs are rigorous and clear. The reader is brought to a point where he can embark on research of his own.

Among the channels discussed are: the discrete memoryless channel, compound channels, channels with feedback, channels with stochastically determined states, channels with memory, semicontinuous and continuous channels.

The monograph is designed to be read by anyone with a modest amount of mathematical maturity. It will be of interest to mathematicians, electrical engineers, mathematical statisticians, and other members of the scientific community concerned with this rapidly evolving discipline.

Published jointly by P-H and Springer-Verlag, Heidelberg: 1962 125 pages Text price: \$7.00

INTERNATIONAL JOURNAL OF ABSTRACTS STATISTICAL THEORY AND METHOD

A Journal of the International Statistical Institute

The aim of this journal of abstracts is to give **complete coverage of published papers in the field of statistical theory** (including associated aspects of probability and other mathematical methods) and **new published contributions to statistical method.**

All contributions in the following five journals—being wholly devoted to this field—are abstracted: *Annals of Mathematical Statistics*; *Biometrika*; *Journal, Royal Statistical Society (Series B)*; *Bulletin of Mathematical Statistics*; *Annals, Institute of Statistical Mathematics*; and a further group of six journals are abstracted on a **virtually complete** basis as follows: *Biometrics*; *Metrika*; *Metron*; *Review, International Statistical Institute*; *Technometrics*; *Sankhyā*. There are about 250 other journals partly devoted to statistical theory and method from which the appropriate papers are abstracted.

The abstracts are about 400 words long—the recommendation of UNESCO for the 'long' abstract service: they are in the English language although the original language of the paper is noted on the abstract together with the name of the abstractor. In addition the address of the author(s) is given in detail to facilitate contact in order to obtain further detail or request an off-print. **The journal is published quarterly and contains approximately 750 abstracts per year.**

A scheme of classification has been developed for the abstracts that is flexible and facilitates the transfer of code numbers to punched cards. **A unique aspect of this journal** is that the pages are colour-tinted according to the main sections of classification. This method of colour-coding the pages provides a distinctive and powerful visual aid in the identification of abstracts in whatever manner the journal is filed for reference.

ANNOUNCEMENTS

REPORT OF THE STILLWATER MEETING

REPORT OF THE WALT AIR MEETING

THE INSTITUTE OF MATHEMATICAL STATISTICS

(Organized September 12, 1935)

OFFICERS

President:

A. H. Bowker, Department of Statistics, Stanford University, Stanford, California

President-Elect:

T. W. Anderson, Department of Mathematical Statistics, Columbia University, New York 27, New York

Secretary:

G. E. Nicholson, Jr., Department of Statistics, University of North Carolina, Chapel Hill, North Carolina

Treasurer:

Gerald Lieberman, Institute of Mathematical Statistics, Sequoia Hall, Stanford University, Stanford, California

Editor:

J. L. Hodges, Jr., Department of Statistics, University of California, Berkeley 4, California

The purpose of the Institute of Mathematical Statistics is to encourage the development, dissemination, and application of mathematical statistics.

Membership dues including a subscription to the ANNALS OF MATHEMATICAL STATISTICS are \$10.00 per year for residents of the United States or Canada and \$5.00 per year for residents of other countries. There are special rates for students and for some other classes of members. Inquiries regarding membership in the Institute should be sent to the Treasurer of the Institute.

Membership in the Institute of Mathematical Statistics is not required of authors of papers in the *Annals of Mathematical Statistics*, and the fact of membership or non-membership is given no weight in the consideration of submitted manuscripts.

MEETINGS OF THE INSTITUTE

TENTATIVE SCHEDULE

**EASTERN REGIONAL MEETING—
Cambridge, Massachusetts, May 6-7, 1963**

Abstracts should be submitted in duplicate to the Editor, on abstract blanks which can be found in the back of every *Annals*, beginning with the March 1961 issue, or can be obtained from the IMS Secretary. Abstracts must be received at least 50 days before the first day of the meeting at which they are to be presented, indicating whether presented by title or in person. (Only one contributed paper may be given in person at any one meeting.) They may be printed prior to the publication of the report of the meeting. Those received by April 30 will appear in the September *Annals*, by July 31 in December, etc. Abstracts should be limited to 200 words or the equivalent, and should avoid displayed expressions and complicated formulae. They can be accepted from non-members of the IMS only if introduced by members. Abstracts must follow the stylistic requests on the abstract blank, or they may be returned.
