The Institute of Mathematical Statistics
announces publication of the

**CUMULATIVE INDEX TO
IMS SCIENTIFIC JOURNALS
1960–1989**

- Indexes the following journals:

  The Annals of Mathematical Statistics (Vols. 31-43, 1960-1972)
  The Annals of Statistics (Vols. 1-17, 1973-1989)
  The Annals of Probability (Vols. 1-17, 1973-1989)
  Statistical Science (Vols. 1-4, 1986-1989)
  Selected articles from *The IMS Bulletin* (Vols. 16-18, 1987-1989)

- Follows the same format as the *Current Index to Statistics,* including author and subject indexes:

  Author index lists each author of each article. Lists are chronological for each author.

  Subject index lists each article according to important words in its title and key words not appearing in the title.

Published by the Institute of Mathematical Statistics. Publication of the *Cumulative Index to IMS Scientific Journals* is expected in early 1991.

An Introduction to Continuity, Extrema, and Related Topics for General Gaussian Processes

by Robert J. Adler

This monograph provides a general and abstract introduction to the theory of sample path properties of Gaussian processes based on concepts such as entropy and majorising measures. A generally accessible introduction to majorising measures, the general theory of continuity, boundedness, and suprema distributions for Gaussian processes is presented.

Contents

Introduction
The basic ideas; The Brownian family of processes; A collection of examples; Exercises
Two Basic Results
Borell's inequality; Slepian's inequality; Applications in Banach spaces; Exercises
Prelude to Continuity
Boundedness and continuity; Zero-one laws and continuity; The Karhunen-Loeve expansion; Exercises
Boundedness and Continuity
Majorising measures; Upper bound proof; Lower bound proof; Entropy; Ultrametricity and majorising measures; Discontinuous processes; Exercises
Suprema Distributions
Introduction; Some easy bounds; Processes with a unique point of maximal variance; General bounds; The Brownian sheet on the unit square; Exercises
Afterthoughts
Two topics that were left out; Directions for research
References

14 INVARIANT MEASURES ON GROUPS AND THEIR USE IN STATISTICS

by Robert A. Wijsman

A discussion of distributions in statistical models with groups of invariance transformations.

This monograph deals with problems concerning distributions in statistical models in which there is a group of invariance transformations. The methods presented make use of mathematical tools that involve the interplay between groups and integration. The author demonstrates by examples the statistical usefulness of these methods and presents a systematic account of their mathematical background.

15 ANALYTIC STATISTICAL MODELS

by Ib M. Skovgaard

An introduction to analytic statistical models.

This monograph introduces a class of statistical models (the analytic models) which is sufficiently well behaved to satisfy regularity conditions of the type typically met in theorems of asymptotic statistical inference, and at the same time sufficiently rich to contain many of the commonly used statistical models, including the (sufficiently smooth) curved exponential families. The author defines the class of analytic models, derives its basic mathematical and probabilistic properties, shows that it contains a wide range of common statistical models, and demonstrates its applicability in asymptotics.

16 TOPICS IN STATISTICAL DEPENDENCE

edited by H. W. Block, A. R. Sampson, & T. H. Savits

Proceedings of the Symposium on Dependence in Probability and Statistics, Somerset, Pennsylvania, August 1987.

This was the first symposium dedicated solely to research in the area of positive and negative dependence for the modeling and analysis of multivariate data. Many researchers in this broad and diverse field contribute 41 papers to this volume.
