- How sampling reveals a process DONALD S. ORNSTEIN AND BENJAMIN WEISS
Random walks and percolation on trees RUSSELL LYONS
Random walks and intersection local time JAY ROSEN
On nonincrease of Brownian motion KRZYSZTOF BURDZY
Nonintersection exponents for Brownian paths. II.
Estimates and applications to a random fractal
KRZYSZTOF BURDZY AND GREGORY F. LAWLER
Optimal switching between a pair of Brownian motions
AVI MANDELBAUM, LARRY A. SHEPP AND ROBERT J. VANDERBEI
The first exit time of a two-dimensional symmetric stable process
from a wedge R. DANTE DEBLASSIE
Large deviation lower bounds for additive functionals
for Markov processes NARESH C. JAIN
Partially observed control of Markov processes, III OMAR HIJAB
Central limit theorems for the local times of certain Markov processes
and the squares of Gaussian processes
ROBERT J. ADLER, MICHAEL B. MARCUS AND JOEL ZINN
Extreme values and high boundary crossings of locally stationary
Gaussian processes J. HÜSLER
Limiting distributions of non-linear vector functions
of stationary Gaussian processes HWAI-CHUNG HO AND TZE-CHIEN SUN
Weak convergence of random functions defined by the eigenvectors
of sample covariance matrices JACK W. SILVERSTEIN
Induced Dirichlet forms and capacitary inequalities I. ISCOE AND D. McDONALD
Random space change for multiparameter point processes M. GOPALAN NAIR
Asymptotic stationarity of queues in series and the heavy traffic approximation
W. SZCZOTKA AND F. P. KELLY
On the quasireversibility of a multiclass Brownian service station
J. M. HARRISON AND R. J. WILLIAMS
The tight constant in the Dvoretzky–Kiefer–Wolfowitz inequality P. MASSART
The asymptotic joint distribution of self-normalized censored sums
and sums of squares MARJORIE G. HAHN, JIM KUELBS AND DANIEL C. WEINER
Asymptotic properties of the bootstrap for heavy-tailed distributions PETER HALL
Weak convergence of serial rank statistics under dependence with applications
in time series and Markov processes MICHEL HAREL AND MADAN L. PURI
Error bounds for exponential approximations of geometric convolutions MARK BROWN
On the average number of level crossings of a random
trigonometric polynomial KAMBIZ FARAHMAND
On Dykstra's iterative fitting procedure WILLIAM E. WINKLER

APPLICATIONS
IN
STATISTICS**

Morris L. Eaton
University of Minnesota

Sponsored by the
Conference Board of the Mathematical Sciences
Supported by the
National Science Foundation
Published by the
Institute of Mathematical Statistics
and the
American Statistical Association

These lecture notes result from the CBMS/NSF Regional Conference held at the University of Michigan in June 1987. Topics in invariance with applications in statistics are discussed in nine chapters—including integrals and the Haar measure, group actions and relatively invariant integrals, invariant statistical methods, models invariant under compact groups, decomposable measures, invariant decision problems, random orthogonal matrices, finite deFinetti style theorems, and finite deFinetti style theorems for linear models.

The Institute of Mathematical Statistics and the American Statistical Association are proud to announce the publication of this new *Series*. The volumes in this *Series* are based on the CBMS/NSF regional research conferences and join SIAM's *CBMS Series in Applied Mathematics* and AMS's *CBMS Series in Mathematics*. Volume 1 will be available late in 1989 with one volume expected per year thereafter.

List Price \$25

IMS/ASA/CBMS Member Price \$15

Institutional standing orders to this *Series* provide for advance notification of publication dates for each volume and access to *prepublication discounts* of 20%. **Members of IMS, ASA, and CBMS societies receive a 40% discount.** Prepaid orders for individual volumes and requests for standing order enrollment should be sent to:
