

JOURNALS PUBLISHED BY THE AMERICAN MATHEMATICAL SOCIETY

Bulletin of the American Mathematical Society is the official organ of the Society. It reports official acts of the Society and the details of its meetings. It contains some of the officially invited addresses presented before the Society, reviews of advanced mathematical books, and has a department of research announcements. Invited addresses offered for publication should be sent to HANS F. WEINBERGER, Department of Mathematics, University of Minnesota, Minneapolis, Minnesota 55455. Book reviews should be sent to GIAN-CARLO ROTA, Department of Mathematics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139. Research announcements should be sent directly to a member of the Council of the American Mathematical Society. All other correspondence about research announcements should be sent to MURRAY H. PROTTER, Department of Mathematics, University of California, Berkeley, California 94720. A list of members of the Council for 1972 is listed on the inside back cover. All other communications to the editors should be sent to the Managing Editor, MURRAY H. PROTTER.

The first page of each article, including research announcements, that is submitted for publication should bear a *descriptive title* which should be short, but informative. Useless or vague phrases such as "some remarks about" or "concerning" should be avoided. Before the first footnote, there should be the *AMS(MOS) subject classification numbers* representing the primary and secondary subjects of the article. If a list of *key words and phrases* describing the subject matter of the article is included, it will also be printed as a footnote on the first page. The AMS(MOS) Subject Classification Scheme (1970) with instructions for its use can be found as an appendix to MATHEMATICAL REVIEWS, index to volume 39 (1970). See the June 1970 NOTICES for more details, as well as illustrative examples. The subscription price is \$12 per annual volume of six numbers.

Proceedings of the American Mathematical Society is a monthly journal devoted entirely to research in pure and applied mathematics, principally to the publication of original papers of moderate length. A department called Shorter Notes was established for the purpose of publishing very short papers of an unusually elegant and polished character for which there is normally no other outlet. Papers in algebra, number theory, and algebraic geometry should be sent to GEORGE B. SELIGMAN, Department of Mathematics, Yale University, New Haven, Connecticut 06520 or to JOSEPH J. ROTMAN, Department of Mathematics, University of Illinois, Urbana, Illinois 61801; in modern or classical analysis to JACOB FELDMAN, Department of Mathematics, University of California, Berkeley, California 94720, to LEE A. RUBEL, Department of Mathematics, University of Illinois, Urbana, Illinois 61801 or to ALLEN L. SHIELDS, Department of Mathematics, University of Michigan, Ann Arbor, Michigan 48104; in set-theoretic and general topology to W. WISTAR COMFORT, Department of Mathematics, Wesleyan University, Middletown, Connecticut 06457; in algebraic topology and all other geometry to GLEN E. BREDON, Department of Mathematics, Rutgers University, New Brunswick, New Jersey 08903; in applied mathematics, differential equations, and related areas of analysis to FRED G. BRAUER, Department of Mathematics, University of Wisconsin, Madison, Wisconsin 53706; in probability, statistics, and related fields to JAMES D. KUELBS, Department of Mathematics, 213 Van Vleck Hall, University of Wisconsin, Madison, Wisconsin 53706; in logic, set theory, and related areas to ROBERT I. SOARE, Department of Mathematics, University of Illinois at Chicago Circle, Chicago, Illinois 60680. All other communications should be addressed to the Managing Editor, JOSEPH J. ROTMAN.

Mathematics of Computation is a quarterly journal devoted to original papers in numerical analysis, the application of numerical methods and high-speed calculator devices, the computation of mathematical tables, the theory of high-speed calculating devices, and other aids to computation. In addition, reviews and notes in these and related fields are published. Prospective publications should be sent to the Editor, EUGENE ISAACSON, Courant Institute of Mathematical Sciences, New York University, 251 Mercer Street, New York, New York 10012.

Mathematical Reviews is a monthly journal devoted to abstracts and reviews of the current mathematical literature of the world. Each volume consists of six regular issues plus an index issue. Abstracts and reviews are grouped under subject headings.

Transactions of the American Mathematical Society is a monthly journal devoted entirely to research in pure and applied mathematics and, in general, includes longer papers than those in the PROCEEDINGS. Papers in analysis and applied mathematics should be sent to FRANÇOIS TREVES, Department of Mathematics, Rutgers University, New Brunswick, New Jersey 08903; in topology to STEVE ARMENTROUT, Department of Mathematics, Pennsylvania State University, University Park, Pennsylvania 16802; in algebra, number theory, and logic to DOCK S. RIM, Department of Mathematics, University of Pennsylvania, Philadelphia, Pennsylvania 19104; in geometry and abstract analysis to SHLOMO STERNBERG, Department of Mathematics, Harvard University, Cambridge, Massachusetts 02138; in statistics and probability to HARRY KESTEN, Department of Mathematics, Cornell University, Ithaca, New York 14850; in mathematical logic and foundations to ALISTAIR H. LACHLAN, Department of Mathematics, Simon Fraser University, Burnaby (2) British Columbia, Canada. All other communications to the editors should be addressed to the Managing Editor, STEVE ARMENTROUT.

Memoirs of the American Mathematical Society constitute a series of paperbound research tracts which are of the same general character as the papers published in the TRANSACTIONS. An issue of the MEMOIRS contains either a single monograph or a group of cognate papers. Information on preparation of camera copy and charges for publication may be obtained by writing to the Editorial Department of the American Mathematical Society. Papers should be sent to the appropriate editor of TRANSACTIONS.

Notices of the American Mathematical Society, published eight times a year, announces the programs of the meetings of the Society. The NOTICES carries the abstracts of all contributed papers presented at the meetings of the Society and publishes news items of interest to mathematical scientists. All communications should be addressed to the Editor, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02904. News items and insertions for each issue must be in the hands of the editor on or before the deadline for the abstracts for the papers to be presented in the meetings announced in that issue. These deadlines are published regularly on the inside front cover.

Soviet Mathematics—Doklady is a bimonthly translation journal containing the entire pure mathematics section of the DOKLADY AKADEMIĪ NAUK SSSR, the Reports of the Academy of Sciences of the USSR. DOKLADY publishes about 500 articles a year, each about four pages long.

Mathematics of the USSR—Izvestija, a bimonthly journal, is a cover-to-cover translation of IZVESTIJA AKADEMIĪ NAUK SSSR SERIJA MATEMATIČESKAJA, published by the Academy of Sciences of the USSR. This is a journal of current research in all fields of pure mathematics.

Mathematics of the USSR—Sbornik is a monthly journal and is a cover-to-cover translation of MATEMATIČESKIIĪ SBORNIK (NOVAJA SERIJA), published by the Moscow Mathematical Society and the Academy of Sciences of the USSR. This is a journal of current research in all fields of pure mathematics.

CURRENT AWARENESS SERVICES

Contents of Contemporary Mathematical Journals and New Publications, published bi-weekly, reproduces the tables of contents of approximately 250 mathematical journals. Every other month this journal carries announcements of new books and journals in all fields of higher mathematics and a section on both forthcoming and recently published books.

Mathematical Title Service provides to each subscriber a monthly list of articles selected for him individually according to the subscriber's own definition of his interests. Every listing provides complete publication information on an article, including subject classification numbers. Communications regarding this service should be directed to Mathematical Title Service, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02904.

Contents—continued from back cover

H. P. Allen. Invariant splittings in nonassociative algebras: A Hopf approach.	245
David A. Hoffman. Surfaces in constant curvature manifolds with parallel mean curvature vector field.	247
P. J. Sally, Jr. and Garth Warner. Fourier inversion for semisimple Lie groups of real rank one.	251
Louis Auslander and Jonathan Brezin. Invariant subspace theory for three-dimensional nil-manifolds.	255
Howard Garland. p -adic curvature and a conjecture of Serre.	259
Frank Quinn. Surgery on Poincaré and normal spaces.	262
Charles M. Newman. The inner product of path space measures corresponding to random processes with independent increments.	268
William Parry and Peter Walters. Endomorphisms of a Lebesgue space.	272
Albert Baernstein II. Proof of Edrei's spread conjecture.	277
Gilbert Baumslag. On finitely presented metabelian groups.	279
James S. Howland. Perturbation of embedded eigenvalues.	280
James K. Brooks. Weak compactness in the space of vector measures	284
1971 Election Results.	288
Charles L. Hagopian. Addendum to: A fixed point theorem for plane continua.	289
Erratum, Volume 77.	290

Members of the Council for 1972

Richard D. Anderson, Steve Armentrout, Michael Artin, Michael F. Atiyah, Robert G. Bartle, Hyman Bass, Paul T. Bateman, Fred G. Brauer, Glen E. Bredon, Felix E. Browder, Edgar H. Brown, Jr., R. Creighton Buck, Alberto P. Calderón, George F. Carrier, S. S. Chern, W. Wistar Comfort, Morton L. Curtis, Jacob Feldman, Frederick W. Gehring, Oscar Goldman, Walter H. Gottschalk, Orville G. Harrold, Jr., Philip Hartman, Eugene Isaacson, Nathan Jacobson, Harry Kesten, Alistair H. Lachlan, C. C. Lin, Saunders Mac Lane, W. T. Martin, Calvin C. Moore, P. S. Mostert, Richard S. Pierce, Everett Pitcher, Murray H. Protter, Dock S. Rim, Alex Rosenberg, Kenneth A. Ross, Gian-Carlo Rota, Joseph J. Rotman, Lee A. Rubel, Mary Ellen Rudin, Robert T. Seeley, George B. Seligman, James B. Serrin, Edwin H. Spanier, Elias M. Stein, Shlomo Sternberg, Dorothy Maharam Stone, Olga Taussky Todd, François Trèves, Hans F. Weinberger, Bertram Yood.

CONTENTS

March, 1972

Ted Petrie. Smooth S^1 actions on homotopy complex projective spaces and related topics.	105
S. M. Shah. Analytic functions with univalent derivatives and entire functions of exponential type.	154
Alessandro Figà-Talamanca. Review of "Abstract Harmonic Analysis. I, II" by E. Hewitt and K. A. Ross.	172
Bertram Walsh. Review of "Introduction to the Theory of Partially Ordered Spaces" by B. Z. Vulikh.	178
The October Meeting in Cambridge.	182
The November Meeting in Auburn, Alabama.	183
The November Meeting in Milwaukee.	184
Felix E. Browder. Normal Solvability and ϕ -accretive mappings of Banach spaces.	186
John Knopfmacher. Finite modules and algebras over Dedekind domains and analytic number theory.	193
Chi-Lin Yen. The range of m -dissipative sets.	197
Richard Holzsager. Riemannian manifolds of finite order.	200
P. H. Maserick. BV -functions on commutative semigroups.	202
Michael Edelstein. The construction of an asymptotic center with a fixed-point property.	206
Carl H. FitzGerald. Exponentiation of certain quadratic inequalities for Schlicht functions.	209
David W. Kueker. Löwenheim-Skolem and interpolation theorems in infinitary languages.	211
S. M. Gersten. On the spectrum of algebraic K -theory.	216
Miguel L. Laplaza. Coherence for categories with associativity, commutativity and distributivity.	220
Robert Gilmer. On Prüfer rings.	223
W. V. Petryshyn. A new fixed point theorem and its application.	225
Thomas G. Hallam. A terminal comparison principle for differential inequalities.	230
Lowell Jones. The converse to the fixed point theorem of P. A. Smith.	234
R. W. Hansell. On the nonseparable theory of Borel and Souslin sets	236
Mark A. Pinsky. Limit theorems for continuous state branching processes with immigration.	242
