

## INSTRUCTIONS TO AUTHORS

### A. General

Manuscripts should be submitted in duplicate. They should preferably be written in English; papers in French or German are also accepted.

Manuscripts must be in their **final form**, typed on one side of each sheet only, with double spacing and wide margins. Formulae should be typewritten whenever possible. Mimeographed copies are not acceptable unless clearly legible.

Please include a "Note for the Printer" explaining markings used. See suggestion overleaf.

To speed up publication, authors will receive **only one set of proofs**: provisionally numbered page proofs. Authors are requested to **correct typographical errors only**; they will be charged for corrections involving changes, additions or deletions to the original manuscript.

**Diagrams** should be submitted on separate sheets, not included in the text. They should be drawn in Indian ink in clean uniform lines, the whole about twice the size of the finished illustration. Inscriptions should allow for the figure 1, for example, to be about 2 mm high in the final version (i.e. 4 mm for reduction  $\times \frac{1}{2}$ ). The author should mark in the margin of the manuscript where diagrams may be inserted.

**Footnotes**, other than those which refer to the title heading, should be numbered consecutively and placed at the foot of the page to which they refer (not at the end of the article).

Please give on the first page of the manuscript a **running head** (condensed title), which should not exceed 70 letters including spaces.

**References** to the literature should be listed at the end of the manuscript. The following information should be provided for **journal articles**: names and initials of all authors, name of the journal, volume, first and last page numbers and year of publication. References to **books** should include name(s) of author(s), full title, edition, place of publication, publisher and year of publication.

### *Examples*

Bombieri, E., Giusti, E.: *Inventiones math.* **15**, 24–46 (1971)

Tate, J.T.: *p*-Divisible groups. In: *Proceedings of a conference on local fields*, pp. 158–183. Berlin-Heidelberg-New York: Springer 1967

# All you may ever need to know about the **SCIENCE CITATION INDEX®** but never found time to ask.

If you've heard about the *Science Citation Index*, wondered how it works or compares with traditional subject indexes, here's your chance to get the full story

A new, comprehensive booklet discusses every facet of this unique indexing system. And it's available to you without cost or obligation

Just off press, this booklet is full of facts, figures, theory and how-to-use-it information. For example, you'll find discussions of:

- How the *SCI*® employs citation and Permuterm® subject indexing to avoid use of ambiguous terminology.
- How the *SCI* covers over 90% of the significant scientific and technical journal literature.
  - What is citation indexing?
  - How the *SCI*'s sophisticated, computer-based information processing reduces the time lag between original publication and indexing to a bare minimum.
- How to perform four basic types of literature searches—with sample indexing entries shown in detail

**So if you want to know all about the *SCI*, now's the time to ask. Send for your free booklet or ask for any reasonable number you may need for your organization.**

Please send me \_\_\_\_\_  
copies of your new booklet on the  
*Science Citation Index*® without cost or obligation.
